and many customers considered this a fine opportunity to discharge their ice man, and proceed to ice up the store for all purposes, one Greek merchant taking ten gallon tubs of ice off the truck one day, with which to ice up his water melons.

This was about the limit, so we all agreed to work and find a solution of this new problem, and again met in conferences.

We wanted to get the merchant to understand that the ice belonged to us, that it cost money, time to replenish the supply, and delay among the rigs, so that customers at the farther end of the route were entirely without ice and had soft ice cream, while the rigs were away replenishing the supply, or writing for a new supply to be brought to them.

Sometimes a threat to reverse the route so that the ice taking customer-himself would be the last one to see its effect. We still have our troubles along this line, but we will ultimately reduce this practice to a minimum.

We now call it a service charge, because servicing is the correct name; and why not? Does any other business in the world do all the advertising, send its man daily to a store, assume the responsibility of keeping the stock a man sells in perfect condition, replenish it the same daily, give him additional service should necessary demand, and assure him of a turnover, that is second to none in his store?

Is this not a factor to be weighed when considering the correct price for ice cream? Should one man be made to pay for ice his more slick brother down the street gets for nothing?

The man who says to your driver, "Do you like Camels? Good smoke are they not? Help yourself, I don't forget my pop, the root beer barrel, and I chipped ice for my drinks, and you might incidentally put a pail of ice in the ice box."

It may be that only 20 per cent of your trade is sufficient enough to get this extra ice. Then what about the other fellow who does not do this thing? You are charging him a premium. Then the fellow who helps himself is still a greater menace than one who asks the driver to bring it in. He will take all kinds of ice because there is no restraint placed upon him, as the driver is busy packing and is not observing him closely.

Service Charge A Regulator.

Therefore, the service charge becomes a necessity, a regulator, and a surety of a square deal to each and every customer, regardless of size, location or any other consideration.

Our charge is \$1.00 per week. We do not limit flavors or the number of holes in the cabinet. The service charge acts as a leveler in another way. For example:

A 100 gallon a week customer pays one cent for service. Thus, if ice cream costs him \$1.20 per gallon his price would be \$1.21.

A 50 gallon a week customer pays two cents for service, or \$1.22 for his ice cream.

A 10 gallon customer pays 10 cents for his service, or \$1.30 per gallon for his ice cream.

A five gallon a week customer pays 20 cents for service, or \$1.40 a gallon for his ice cream, and he will not remain long on the list because of the additional cost to him.

This automatically cuts him off in the fall when business drops, because he cannot see his way clear

pay this additional charge, and keep him from coming on in the early spring, because of the same reason.

In 1912, when we started this work it was not uncommon to have two grocery stores, one meat market, two drug stores, and one confectionery store all in one block selling yours, or the other fellow's ice cream.

Almost within a month there were 200 less stops, and within a year 500 less customers, but the ice cream production showed a gain of almost 30 per cent over the preceding year.

Soon the high class confectionery and the better class drug store, and the utility confectionery and grocery, that keep open late at night and Sunday had all the business. Only one butcher shop kept ice cream, so far as my observation would permit last year, and he was in an obscure location where some of the companies were fighting for representation. The regular grocery stores have long since dropped the sale entirely.

Tripled Business.

It is now profitable to stores who are carrying ice cream to make a business of it and in the ten years since we went into full swing with the service charge we have tripled the ice cream business.

While there has been some loss of customers because of this service charge, yet the difference has been offset, in that the customers who remain have almost tripled their business, and the result is that everybody is better satisfied with the new program.

That you may have a vision before you what this actually means in practice, there are seven companies competing here. I have the positive figures from five and estimates of the others, and there has been returned the year 1922 as follows:

Company No. 1—	\$11,628 collected through service charges.
Company No. 2—	11,182 collected through service charges.
Company No. 3—	5,126 collected through service charges.
Company No. 4—	6,896 collected through service charges.
Company No. 5—	3,469 collected through service charges.
	(Estimated.)
Company No. 6—	3,400 collected through service charges.
Company No. 7—	1,700 collected through service charges.

or a total of nearly \$40,000, and already a sum equal or beyond this figure is in the hands of the ice cream companies for the year 1923.

This means a lower price can be maintained and better service rendered.

This is a proven fact, since our wholesale price delivered is lower than any other of the big cities on the Pacific Coast.

For example: City No. 1 gets \$1.50 for vanilla and \$1.40 for colors. City No. 2 gets \$1.40 for vanilla and \$1.30 for colors. City No. 3 gets \$1.30 for any bulk, and we get \$1.20 on all bulk, and standards are practically alike everywhere on the coast.

The writer, being the father of this icing charge, is naturally proud of its accomplishments, but it has short comings in several respects.

We do not provide a depreciation charge for our cabinets, which should be done, and allow the customer as many as he insists on having.

We use moral suasion in an effort to try and get a man to see the value of keeping down the cabinets on his premises. There are many who carry too many ice creams, and I am treating with this a little farther in the paper.

Yesterday in a neighboring factory one of the salesmen was asked to visit a complaining customer. Upon investigation he found the man carried eleven different kinds of ice cream and the chocolate about which he was complaining was forty-two days in his establishment, though we have a law, which says that ice cream should not be more than ten days old.

The solution of this is only one thing. The service charge should be maintained because it is the quantity price regulator, but an additional charge should be made on the basis of each hole iced up on the premises. In three holes a low price and more a higher price. This is to reduce the number of kinds of ice cream carried by the agent, and insure the customers fresh ice cream and assist in retaining the name that you work so hard to create.

How many of you, for instance, would want to see ice cream that had been slopped around in a cabinet for forty-two days? The company salesman, who formerly was engaged in the hay and grain business said, "It's old enough to sprout; my 'Gawd' ain't it awful?"

There is one factor that must be weighed carefully in putting on a cabinet hole charge, and I caution you to consider; that is the question of delivery. The charge should be arranged so as to enable the agent to carry enough ice cream, or should be made so that storage cabinets shall provide one hole for each hole at the fountains, or a fair proportion thereof.

Because if this is not adhered to, you will have an aeroplane service to supply the demands and it will come, due to the agents unwillingness to pay for the additional holes which he needs.

As a stop gap you could make a delivery charge for each service you rendered. For instance—you could

ered. Publish this on a blackboard, or a card ar-
ed so that each and every rig salesman can see it.

you have a series of down town routes it would
ell to put them in; a series of suburban routes; a
s of long distance routes may be put in other lists,
at the men would have a fair chance, when consid-
them from a competitive standpoint.

\$25.00 prize for every six drivers over routes where
ar conditions prevail, is a sufficient incentive to
the men work. This \$25.00 is split; \$15.00 for the
prize, \$5.00 for the second, \$3.00 for the third, \$2.00
he fourth, and two men have no prize. I find that
men take up with the service mangaer immediately
mount of ice that is given away or stolen on their
e, so that they can help themselves win their prize.
hen the service man must get busy with the sales
ger. The sales manager is notified that truck
er so and so has a customer on his route taking so
ice a day, and the sales manager calls Mr. Rig
er in and explains to him: "This is the method I
d use if I were you in handling this man."

all his attention to the fact he is on a contest route,
that on this route there are some very acceptable
s given, which he will be anxious to win, and that
prize goes on each month. Ask him if he won't
you by signing for all of the ice he takes that is
used for the packing of ice cream. In this way you
have an exact record of the amount of ice that is
used for that purpose, and ask him to sign the slip
a he presents it for his ice cream.

his the customer will quite often do very readily,
ough once in a while the sales manager has to take
nd in it and make a personal visit, because he is
ous to work with the man on the route and will
him in every way that he can.

When these slips come into the office the sales man-
then has an exact check on the amount of ice that
ing sold and given away on the route, and it is his
o call upon this fellow, and usually the sales man-
has to call upon him personally, because nobody
in authority can quite do this job exactly right. In
e words, he must speak as one of the big guns, to
e it very plain to this man, that this ice costs money,
and usually a reasonable business man is not hard
lk to. But there are times that the sales manager
to have lime in his spine, and stand up and refuse
ke care of this customer any longer, unless he de-
from this practice.

a quitting the other fellow he earns the approbation
ll his competitors as well as the legitimate trade.

LITTLE ROCK EXPECTS EVERY DIXIE MANUFACTURER TO BE ITS GUEST DECEMBER 4, 5 AND 6.

he has commenced to learn the value that can be given to the customer through the saving of ice, and he will be obliged to do that or get out of the game.

It does not take the concern, that is willing to give ice away free, long to learn that high ice costs spell failure in a business done on so close a margin as ours and subject to so many seasonable changes.

Almost a Necessity.

In conclusion, a service charge is almost a necessity. The cabinet charge, a coming certainty within the next few years, and will be generally practiced, unless the new small refrigerating device offers a greater solution than that now presented.

A checking up by the secretary of the National Ice Cream Men's Association's office will give the information as to the amount of ice and salt per gallon the other fellow is using. The dissemination of this information to all who are members of this association, that they may know how to judge what their own service rigs are doing, thus creating standards of service.

And if no other way can be found to license cream and ice rigs for the sale of ice or ice cream respectively, so that the men taking the ice from the could be prosecuted, and companies enforce their

And last, contests between the men, that you thus, through your own organization, reduce your But let me say one thing. I have found that men once in a while when these contests are on, so for a complaint on soft ice cream, due to the fact that men have been cutting here and there, I deduct 20 cent. That stops that source of complaint almost immediately.

I regret my inability to be present and to personally present this paper to you. I know you will have one who will present facts from their experiences, and have, in a small way, been able to bring a new thought to you through our long experience, since we are only people charging a service charge for anything so long a time, I shall deeply appreciate the privilege that has been thus afforded me.

Reducing Delivery Costs By Reducing Delivery Service

By HARRY J. TAIT*

IN various industries and at different times, careful studies have been made to determine the relative delivery costs of wagons, gasoline and electric trucks. We have used gasoline trucks exclusively until June 1st of this year; at that time in our Holyoke, Mass. plant, we converted a low-down sheet steel milk delivery wagon, drawn by one horse, into a wagon for the delivery of ice cream to dealers. We put a back in the wagon, and a cave in the front.

Holyoke, Mass., is a city with a population of approximately 60,000. On June 1th a second wagon was put into service, due to the natural increase in business at that time, and withdrawn on August 24th due to the seasonal falling off in business.

plant and with the stops close together, and it is such conditions only that wagons are adapted. These wagons were used for morning delivery only the time of the driver left for other work at the end of the day was used in the plant. We find it easier to get wagon drivers than chauffeurs; they are, as a rule, men of settled habits who find wagon work comfortable. We believe using the wagons is a good practice and expect to do more of it in the future wherever conditions warrant.

All this, however, is preliminary to a short statement of how costs were reduced through reducing service. Early in the season just past, two other manufacturers and ourselves agreed to discontinue the practice of

	No. Stops.	Length of Route	Hours Delivering	Gals. Sold	Total Cost	By Months Cost per Gal.	For Month Cost per Gal.
Trucks	43	27 miles	8	4051	Jul. \$662.13	.16345)	.1550)
				3549	Aug. 518.10	.14598)	
Wagon No. 1	17	6 miles	7	1516	Jul.		.1213)
				1120	Aug. 345.09	.09891)	
Wagon No. 2	22	5½ miles	7	1973	Jul.		
				1503	Aug. 395.63	.15083)	
Saving on delivery costs, per gallon							.0340)

Our tentative conclusions as to cost per gallon between wagons and trucks are as follows:

In the cost of auto trucking is included: Chauffeurs' wages, gas, oil and grease, depreciation, insurance and taxes, tires and tubes, repairs and miscellaneous upkeep, interest on the investment, "Overhead"—share of general and administrative expense.

The cost of operating wagons includes: Drivers' wages, depreciation, insurance and taxes, repair and upkeep, interest on the investment, "Overhead."

The period covered is hardly of sufficient length to draw positive conclusions that wagon delivery is cheaper than truck, although these data seem so to indicate.

These wagons were used on routes closely packed with cabinets for customers as in the past, and instead of working along the following lines:

On April 1, the price was raised 10 cents a gallon on account of increased manufacturing costs. On the 1st day, the new price was reduced 10 cents a gallon in view of the discontinuance of icing service. The service is "dry pack" delivery, the cans of ice cream being placed in the cave in the wagon and only a layer of salt and ice packed around the cave—not around the cans—to keep the ice cream hard. No salt is carried in the wagon. There is a compartment for broken ice cream placed therein is readily seen, and the driver is supplied with that amount of ice at the rate of 25 cents a gallon. The tub referred to is an ordinary butter tub.

* President, Tait Bros., Inc., Springfield, Mass. An address delivered before the National Association of Ice Cream Manufacturers' Annual Convention at Cleveland, O., October 23, 1923.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

nd to contain 42 to 45 pounds of ice; the 25 cent
rge is identical with that of the ice man. In fact,
y of our customers buy all of their ice from the ice
1, and we would be glad if they all did. Ice, by the
y, is strictly C. O. D. to all customers. Our regular
ek will deliver salt (by the bag only) if a customer
fers to buy from us, but again we do not cater to the
le in salt.

A wagon carries approximately 40 tubs of ice and
gallons of ice cream. Also two or three empty tubs.
have just two customers on these routes who prefer
delivery. To accommodate them, we left a tub at
store; the can is placed in the tub, and iced right
n the wagon. For this ice cream they pay 10 cents
gallon over the regular price—the equivalent of 50
ts for two tubs of ice if a 5 gallon can—but buy their
salt. Also, we charge 10 cents per gallon over the
ular price for afternoon delivery in tubs, by trucks.
s has the effect of making customers place the whole
s order in the morning, and delivery costs are re-
ed through elimination of duplication.

In August, 1922, we operated two Ford trucks and
2-ton trucks, requiring four chauffeurs, to deliver
23 gallons of ice cream. In August, 1923, we used
2-ton truck, one Ford truck half the time, and two
ons, requiring 3½ drivers to deliver 8,178 gallons.
respective costs are not available, since our records
August, 1922, are not complete, but calculating that
th on the same basis as August, 1923, when figures
definite, we find .09950 per gallon in 1923 and .17507
922—a saving of .07557 per gallon. It is unfortunate
period in which data could be collected was so short,
the costs given are only indicative and not final. A
r's operations will result in dependable statistics,
they will not be available until next spring.

Ice and Salt Consumption Reduced Half.

n the meantime, however, the consumption of salt
ice has been reduced one half, the amount of ice
en away by drivers has been reduced to practically
hing, and we firmly believe that the reduction of 10
ts per gallon in price will be more than met by the
uction of service costs. We are looking forward to
winter months when our customers, instead of hav-
their cabinets iced every time the driver calls, will
ice only as actually needed. While no definite
res have been obtained for the cost of icing in the
ter months, it is certain that the cost is considerably
re than the 10 cents additional we used to get. If, in
ition to that, we can operate at a 7½ cent less cost
pared to a 10 cents less price during the summer, we
bound to win, taking the 12 months together.

Very shortly we will lay up our Holyoke trucks for
winter and put back into service the two wagons.
ual experience will demonstrate the practicability
his plan, but it is our belief it is practical. We hope
be able to adopt the same plan at other plants, but
s too soon to make any predictions. We are "sold"
the proposition, and our competitors and our cus-
ers lick it too. When the year rolls around we con-
ntly expect to find a greater profit per gallon as a
ult of the reduction of service.

This paper was prepared before receiving a copy of
convention program. It appears that the symposium
tomorrow morning on "A service charge for icing
inets" might be its proper place. Nevertheless, the
rice plan adopted results directly in a reduction of
very costs, not only by substituting wagons for
eks where feasible, but through the ability of either
ek or wagon to carry a bigger load of ice cream and
make a greater number of stops. It is obvious that
very costs will be reduced under such circumstances.

PROFITABLE BILLBOARDS

ICE CREAM MANUFACTURERS SHOULD
CAPITALIZE LOCAL CONDITIONS

By MILES D. ANDERSON*

BILLBOARD advertising is not a recent innovation. In fact billboard advertising dates back before the time when the old sanscrit writings of the Egyptians decorated the walls of the King's palace. Even King Tut was surrounded by a host of caricatures carved upon the walls of his tomb. So after 3,000 years we have uncovered these to study billboard advertising as it used to be.

Recent developments in billboard advertising have been astounding. Formerly a billboard was read by pedestrians and passers-by driving in slower vehicles, such as ox-carts and horse drawn carriages. The copy was lengthy and the pictorial designs were elaborately worked out, but with the advent of the automobile, accompanied by its faster means of locomotion, billboard advertising to be effective, has had to be shortened and revised.

Various advertising specialists throughout the United States have tried to set a maximum and a minimum length for ideal billboard copy. The average amount of copy set by these specialists is from eight to fifteen words. It has been the author's experience in California at least, for traffic moves very rapidly there, that the ideal length of copy for billboards is from one to eight words—"tell your longer story in news print," has been found a good motto to follow. The ideal length of copy for a billboard is one word, if that one word can convey the entire message.

*Advertising manager Crescent Creamery Company, Los Angeles, California. This was written especially for The Ice Cream Review.

Will Your Maple Flavor
Score Forty?
Percent?

TRY

Elpam

G. W. Wardrop Company, Inc.

BOSTON

450 Broadway

MASS.

The ice cream manufacturer in the use of billboard has to decide whether or not he will use a board of straight lettering or whether he will use a board embodying some cleverly gotten up pictorial design. If a pictorial design is used, immediate attention should be paid to entire simplicity and the use of but a few colors. We cannot expect by the means of a metal board to interpret all the fine details of a finished sketch, regardless of what may be said, no artist can reproduce exact fidelity scenes or figures either in the studio or on the billboard itself, for he has to contend with sunlight, changing atmospheric conditions, and the annoyance of gazing passers-by.

When a pictorial design is used, a very simple design should be selected and under ordinary circumstances no more than four colors should enter into the painting. Many clever schemes can be worked out, such as the use of black and white silhouette figures—the black figures against a white background. As much as possible use vivid coloring—for instance: a light blue will appear to better advantage on a billboard if paired with a purple, etc. The fewer figures on a billboard the better, for figure artists are at a premium, and poor figure work is very detrimental to the general effect of the display.

Must Tie Up A Selling Thought.

"Copy" on a pictorial billboard must tie up the picture with some selling thought that the manufacturer wishes to put across; for instance—if a manufacturer wishes to convey a high quality impression to his customers he will probably depict a scene embodying the element of quality and in his copy use such words as "increase this impression." It is possible to produce a pictorial billboard that is self-descriptive and does not require a single word of copy, except the name of the concern. This is an ideal for billboard advertising concerns attain.

On a billboard where straight lettering or "copy" is used without a pictorial design, the problem becomes one of constructing a sentence of a few words that carries "punch" and a selling message. I will give you an illustration; although it is not ice cream "copy," it will explain my idea thoroughly.

The Paul G. Hoffman Co., Studebaker dealers in Los Angeles, Cal., ran some very timely "copy" which was favorably received by everyone. During the time when the traffic problem was most talked of, the Paul Hoffman Company came on the boards with the following copy—

NOTICE TO MOTORISTS

TAKE CARE WHEN CROSSING THE STREET
THIS TOWN IS FULL OF STUDEBAKER.

This was decidedly "punch copy" and won general approval.

Capitalize local conditions with your billboard. Local problems, local events, make your copy tie up with local conditions. If your city has an event meriting a great deal of public attention, attempt to tie-up this event with your copy. Since your problem of distribution is local, rather than national, you have usually a better opportunity to bring out local events than a national advertiser who must think in terms of the entire United States.

An Ice Cream Health Display

THE display that brings out some strong selling point of the goods being displayed is sure to result in more sales than one which does not make a feature of some such point. One good selling point in connection with ice cream is that it is virtually a health food. In many cases doctors advise its use when patients are on a diet.

Therefore, one good selling point about ice cream and one which can be featured any time of the year is the fact that ice cream is a health giving food. Such a display can easily be made around the idea of "The Bridge to Health."

An easy way to make such a display is to secure some black paper, lay it on the floor of the window and over it place a large sheet of glass. Now on this glass and in the center of the window back near the background build a model of a bridge, either just an imaginary bridge or some bridge that is well known. It does not matter so much what the bridge is a model of so much as that it looks like a bridge. Use empty ice cream cartons for the building blocks. By using the cartons of the different sizes, and those in which the bricks are sold as well as the bulk cream, it is possible to make a very realistic looking bridge.

Next, cover the floor of the window with green crepe paper, leaving part of the glass placed on the floor exposed in such a manner as to give the appearance of a stream winding from the bridge to the glass edge of the window. If desired a few toy trees and toy people may be arranged on this green paper to make it appear more real. If this is to be done, it will be better to lay a few pieces of board or small paste board boxes on the win-

dow floor to form a slight elevation upon which to place the paper. This will give the appearance of a bank on the river.

While this elevation is being built up it will be necessary to arrange an elevation at each end of the bridge so that a road can be shown running from one side of the window, across the bridge to the other side of the window. Empty ice cream cartons and other empty boxes may be used for the purpose, or the desired shapes and elevations may be constructed with pieces of board and card board glued or tacked into place. If one wishes to go to a little more trouble and expense he could use imitation grass instead of the green paper, make a stream by using a metal trough filled partly full with gravel and have real water flowing under the bridge from a hose concealed behind it. Then, of course, the road would be a real gravel one. A strip of grey crepe paper, however, can be used for the road bed.

After the display has been completed, place a large card over the bridge with these words, "The Bridge to Health." Since the words ice cream appear on the cartons, it is not necessary to say anything about ice cream. No other card in fact will be needed other than this center one but if desired a card may be placed in each corner of the window. A good way to make the display effective is to use rather small cards and treat them as warning signs are treated on the highways. Elevate them on a stick at the side of the road, and have them give some sort of health warning such as "Ice cream is prescribed as part of the diet of invalids." and on the other side, "Ice cream is served at the training table of athletes."

"MISS FLORENCE" VISITS ALABAMA.

Word from Mrs. Florence Miller Evers comes to the members of the Ladies' Auxiliary from Birmingham where she went early in October to spend a month with her home folks. She wants all her lady friends to know that she is looking forward to the Little Rock convention. Her sister, "Miss Ruth," also will attend the convention this year.

HOLLINGER VISITS COAST.

Chris Hollinger has joined the chorus in boosting California. He recently made a trip to the coast and found business so good that he forthwith posted a letter to The Ice Cream Review stating that he thought they have a wonderful ice cream industry in the making in the Far West.

Nafis Scientific Glassware

For Testing Milk and Its Products

Stands in a Class by Itself

Years of experience and specializing in making testing glassware have enabled us to produce apparatus of an unusually high degree of

ACCURACY, QUALITY and ECONOMY

There is a tremendous weight in the fact that most of the representative manufacturers of Dairy Products as well as the Dairy Schools and Experiment Stations use NAFIS GLASSWARE, but the strongest proof for you is the proof of your own experience.

If your dealer does not stock NAFIS GLASSWARE, write for our catalog and the names of our distributors in your territory.

Leakproof!

*If your rooms
were filled with gas—*

WERE it possible to replace the cold or dry air in your storage rooms with inflammable gas, you would have an opportunity to test Jamison Doors "under fire."

To learn whether the doors were absolutely leakproof, you could pass a lighted torch around the exterior frame of the door. The gas would not explode—it would not seep through to reach the flame of the torch! It is well to remember that your plant is only as good as its doors. The doors will either keep in profits or allow them to escape. "Door Efficiency" is necessary. It minimizes changes in temperature due to leakage and through heat transmission.

Jamison Doors have proved themselves efficient. They are sturdily built and properly insulated. They bear unusually heavy hardware—three times the weight of the hardware on other doors and embody exclusive Jamison patented features that make the hardware the "Strong points" of Jamison Doors.

In equipping your plant, give consideration to the door made leakproof through its double seals of contact and kept leakproof through the practicality of its hardware. We shall be glad to mail you a copy of our catalogue which describes all of the Jamison equipment, explains their construction, and outlines uses.

Sandy Ice Cream

By CHESTER D. DAHLE*

SANDY ice cream is due to the crystallization of some of the lactose in the ice cream. This does not occur unless condensed milk or powdered milk have been used to build up the solid content of the milk. Additional serum solids as furnished from these sources increase the lactose content of the mix.

Lactose or milk sugar is not as soluble in water as sucrose or cane sugar. It has been demonstrated that lactose is soluble to the extent of about 10 per cent at 0 degrees C. At higher temperatures the water is capable of dissolving more lactose, while a lowering of the temperature will cause some of the sugar to crystallize out. This phenomena occurs in ice cream mixes. An unfrozen mix may show no indication of sandiness but as soon as it is frozen and held a few days, crystals may begin to form. This is brought about by the temperature changes. While it is possible to have sandiness in the unfrozen mix, there is more danger in the frozen mix.

Lactose crystals may be added directly to the mix in highly concentrated condensed milk. This sandiness will usually be noticed as soon as the mix is frozen unless the mix is pasteurized before freezing. Pasteurization eliminates these crystals but this practice will not prevent the occurrence of sandiness later in the frozen ice cream. This is true if the amount of lactose present is greater than can be held in solution by the water of the mix.

* Instructor of Dairy Husbandry, University of Minnesota, St. Paul, Minn. Writer of papers and bulletins pertaining to dairy products. Served with A. E. F. 1918-1919. Above are excerpts from address before World's Dairy Congress in October.

Protective colloids, rennet extract, and other sugars have little if any practical value in preventing lactose crystallization if the amount of lactose present is greater than can be held in solution by the water when cooled to hardening room or cabinet temperatures. Gelatin, unless used in prohibitive amounts, offered no real protection. Glucose, additional sucrose, and corn syrup are of little practical value.

The degree of concentration of lactose is the greater factor in the occurrence of sandiness. It was possible to produce sand with an amount of lactose equal to 10 per cent when calculated on the basis of the amount of water present in the mix.

The total serum solids in the mix which gave a concentration equaled 10.8 per cent. The amount of serum solids in the mix does not denote the concentration of lactose on the basis of the water of the mix. 10 per cent of other solids such as sugar and fat, which is high, mean that less water is present in the mix, and less will be available for dissolving the lactose. A mix and eight-tenths per cent serum solids in a low solid mix gave a concentration of 8.5 per cent lactose on the basis of water, while the same amount of serum solids in a high solid mix gave 9.6 per cent lactose on the basis of water. Sand was experienced in this later mix several weeks before it occurred in the low solid mix. When mentioning the per cent lactose on the basis of the water of the mix it must be remembered that the water content is not pure water, in fact it is a sucrose solution.

Temperature Is Prominent Factor.

The temperature at which a mix containing a certain lactose content is held is a prominent factor in causing sandiness to appear. Temperatures of 15 to 20 degrees F. were very conducive to sand occurrences while a temperature of 0 degrees F. was not so conducive—yet should not be gathered that sandiness cannot occur at this temperature. The rate of diffusion is much slower at this low temperature than at 15 to 20 degrees F.

The practice of permitting the ice cream to become semi-soft and later refreezing it hastened the occurrence of sandiness more than any other single factor, probably of course, the milk sugar is present in amounts which will cause crystallization.

There is but little danger from sandiness if the lactose content is kept below 9 per cent figured on the basis of the water present. As has been pointed out, this amount present may cause sandiness if the temperatures fluctuate greatly and the ice cream is held a long period of time.

Trouble from sandiness can be easily eliminated by lowering the serum solid content to a point where the trouble abates. The amount of lactose which can be safely used will depend on the water content of the mix, the temperature of hardening room or cabinets and the time held in storage.

A Convenient Place to Buy

No other manufacturer and distributor of dairy equipment and supplies is better equipped to give prompt, satisfactory service to its patrons than the A. H. Barber-Goodhue Company.

Our merchandise stocks, both in Chicago and in the Twin Cities, are large and complete. Shipping facilities are unexcelled. Erecting and Engineering Departments are maintained as part of our service.

In Chicago we are close to the principal railroad stations and down-town hotels. Visitors coming in from the north on the Elevated or North Shore Electric should get off at Grand Avenue station and walk two

short blocks south. Easily reached from any part of the city by the elevated or surface cars.

Our Twin City branch location is in the Midway district, equidistant from the centers of Minneapolis and St. Paul. Take any University Avenue car and get off at the door.

You are cordially invited to visit our show rooms and personally select your equipment and supplies. Our Department heads will be able to give you helpful suggestions.

This branch, which serves Minnesota, Dakota and the northern parts of Nebraska and Iowa, enables us to give our patrons in the big northwest dairy country a prompt and thoroughly satisfactory service.

Keeping Cabinets Working Winters

A Few Letters from Ice Cream Manufacturers on the Winter Business Problem

IT has always been the policy of this company to keep out as many cabinets as possible during the winter months. Cabinets are withdrawn from dealers only where it is absolutely necessary, as from parks and amusement resorts. In all other cases winter withdrawals are made during the winter season only, when cabinets require repairs.

To keep our product before the public at this time of the year we adopt various plans. The first and most important is to lay particular stress on the purity and food value of ice cream in all our advertising. We emphasize the content of heat producing fats and sugars, as well as the beneficial effects of ice cream as a dairy product on account of the vitamins it contains.

As another means of keeping up public interest, we introduce novelties and specialties during the winter season. The holiday period lends itself to this particularly. In addition to specialties in bulk, special packaged cream is also introduced. This takes the form of attractive and tasty brick packages, sealrights and chocolate covered novelties.

Our winter advertising does not take the form of newspaper advertising alone. We have large signs painted for display on the sides of our trucks. This winter we introduced a very effective form of advertising by utilizing some of our extra sleighs and horses to give free sleigh rides to school children of the towns we are serving. This plan has attracted favorable comment from the school boards and the local press and in addi-

tion popularizes our company with a large number of potential ice cream consumers.

Last, but not least, we do not reduce the quality of our ice cream or our service during the winter months. If anything we watch our manufacturing process more closely than in the summer. During the rush season it is not always possible to have everything just exact as it should be to turn out the best product but in winter every operation is carried as close to perfection as is possible. This has the effect of increasing the desirability and use of the cream.

PENNSYLVANIA

* * *

This subject of the small ice cream dealer in the winter months is worthy of a great deal of discussion.

We naturally all would like to keep our gallonage as high as possible during the slow months, but it is a question whether it is possible to lose more money by doing so than to have these smaller dealers, mostly grocery stores, discontinue during the winter.

It is very easy to understand that you could put a five gallon can of ice cream in a corner grocery store and it remains there a week or ten days, being repacked daily, which is a very expensive proposition. For this reason, it has been our policy not to encourage the small accounts to continue throughout the winter.

We do not ask them to turn in their cabinets, if they wish to keep on handling ice cream, but we do not encourage them to do so, as we feel we are running a greater loss than we would otherwise.

* * *

WISCONSIN

Unquestionably everyone nowadays is trying to keep up the cream business during the winter—trying to lengthen the summer season. It is up-hill work, but nevertheless it pays and we find it profitable to cater to hotels and home entertainments because two or three retail stands make their own and therefore we compete with them for the retail trade. A few years ago we closed our ice cream department October 1st, and later November 1st, and then January 1st, but for three or four years we have never closed it. So, while I offer a plan to you, it is apparent that it pays to work on the fall and winter business.

MONTANA

* * *

Regarding the ice cream cabinet problem, we would like to hear this question discussed, but our city is so small for us to have any good and practical experience in that part of the ice cream game. However, our experience with the cabinet (other than the fountains) has been very unsatisfactory, and we are now using a set of nicely painted packers. A cabinet is much harder to pack than a packer, and if you let the customer do his own packing, he neglects the job, and especially with the cabinet. So we find the packer the most satisfactory.

MONTANA

* * *

In regard to the question about cabinets, the majority of our customers own their own cabinets and, therefore, we will not have to take any of these cabinets in. Our company has adopted — ice cream, "A Food and Fad," and we will endeavor to sell ice cream all through the winter.

WEST VIRGINIA

* * *

Regarding the keeping of cabinets in the small stores in outlying districts, etc., will state that we have re-

KEEPING CABINETS WORKING WINTERS.

(Continued from page 70)

done nothing along these lines, as it generally results in a loss to us, even when we charge cabinet service, if their business runs below seven gallons per week.

We have been giving this considerable thought in the last few months, wondering if, in time, the business in these districts wouldn't develop to such an extent that it would not only help keep up our output but actually pay us a profit that would really be worth while.

Of course, this is our great problem, where we have real winters, to get people to eat ice cream during these months. It seems to me that a campaign of advertising with the co-operation of these same small dealers a great deal could be accomplished in a year or two's time—always extolling the value of ice cream as a food and a delightful one at that.

We might devise different methods of serving, especially for cold weather, such as pouring warm cranberry sauce over vanilla ice cream, which is really delicious. Also, we are now selling in small quantities butterscotch, caramel and chocolate fudge to families to warm and pour over the servings the same as the fountains do.

Will anxiously await the issues of The Ice Cream Review with articles along these lines, as we are all vitally interested in a larger winter output. Will certainly get valuable information from others who have really developed this business if they will only pass it along to those of us who have not done all that could be done along these lines.

NEVADA.

* * *

We are located in a thinly populated district. The towns which we serve are small, populated fifty to seventy-five per cent by negroes, who, in the fall and win-

ter months, refrain from eating ice cream, on account of being out of work. With them, it is a hand to mouth existence during the cold months. Not working the farms, consequently they have no cash to buy what they need. If they had the cash they would be the best eaters of cream in the land, but, as stated above, that is the reason the ice cream business in the South falls to zero in the winter months.

GEORGIA

* * *

We have only one ice cream cabinet loaned out. The balance of them have been sold at our cost on the monthly payment plan. We find this by far the most satisfactory arrangement for this part of the country.

We tell the merchants by handling the matter in this way they are independent and can buy their ice cream wherever they wish. It is then up to us to furnish the right kind of goods and service.

We do not think that 25 per cent of the trade that has cabinets loaned them appreciate it and there is no reason why cabinets should be loaned them any more than candy cases, or any other fixture. The old saloon method of doing business should not enter into the ice cream business, although it has been in force a long time.

MINNESOTA.

* * *

We have few suggestions to offer, as to how to keep customers handling ice cream during the winter. Of course, if a salesman can show that there is demand for ice cream in their community which they did not realize dealers can sometimes be persuaded to keep on when they would otherwise stop. Various sorts of advertising, no doubt, would help, but we know of nothing better than personal argument.

DELAWARE.

* * *

It has been quite a hard matter to decide really which is the proper thing to do. However, it has been customary for us to try and have the best customers in the small towns keep ice cream all the year around, and, in quite a few instances, it has been both unprofitable for them as well as ourselves.

Of course, we realize that we should try to get the public educated up to the point of eating more ice cream during the winter months and at the same time we know that the ice cream business is only in its infancy, and the public will eventually realize the food value in ice cream, which is both pure and wholesome and we believe as time goes on there will be more ice cream consumed during the winter months than there is at present.

CONNECTICUT.

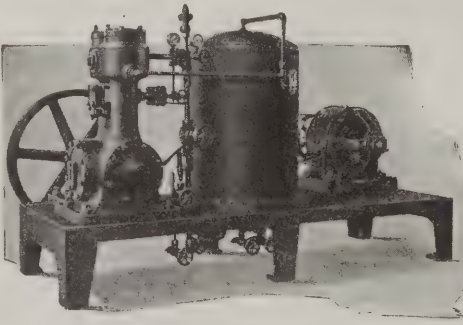

* * *

In our territory we are discouraging the use of cabinets furnished by the manufacturers. As a rule the average amount of ice cream handled by the dealer does not justify the expense of a cabinet. Quite often a new cabinet does not last through the season. We do not run a service wagon in the city. Our experience proves that furnishing a country dealer with an ice cream cabinet does not mean anything towards holding his business, as he usually buys from whom he pleases. We have several accounts on our books the parties of whom have been buying ice cream steadily from us for over two years. The other fellow, of course, was the sucker who furnished the cabinet. He is afraid to recall his cabinet for he fears that by doing so he will lose all chance of ever selling the fellow again. In a few instances we are in the same boat.

LOUISIANA.

PROFESSOR BAER'S INQUIRY DEPARTMENT

Answers to Inquiries

Dear Sir:—What would you consider low acidity test for an ice cream mix? I do not mean, what in your opinion would be the proper acidity for increase of overrun, but just about the lowest acidity that you could get from an entirely pasteurized mix.

Reply: I am quite sure you understand that the acidity of an ice cream mix depends first, on the amount of milk serum solids it contains. Second, on the acidity due to lactic acid development in the milk and cream. The acidity will vary in different mixes from about .20 to .33 per cent. I do not believe it would be possible to have a mix testing lower than .20 per cent acidity if it contained some extra milk solids added in the form of milk powder or condensed milk. Without extra serum solids it might be possible to have a mix test as low as .16 to .18 per cent.

* * *

Dear Sir:—Will you please give us some information on our mix? On May 7th we made up a mix as follows:

93 gals. 4% milk.
143 lbs. cane sugar.
5.50 lbs. gelatine.
66.00 lbs. milk powder.
90.00 lbs. sweet butter.

Out of this mix we got a good swell or overrun, 95 to 100 per cent.

On the 10th we made up another mix as follows:

70 gals. 4% milk.
116.00 lbs. cane sugar.
5.00 lbs. gelatine.
46.00 lbs. milk powder.
80.00 lbs. sweet butter.
3.00 lbs. sugar syrup.
4 gals. 25% sweet cream.
About 50% sugar.

On this last batch we lost about 2 gallons to the batch in overrun and we do not know how to account for it.

It was all made under practically the same conditions, only the last butter seemed to be not so good, the only differences in the two mixes were the 4 gallons of sweet cream we used.

When we found that we were not getting the swell that we should we thought it had not aged enough and lacked acidity (we had aged it 24 hours) so we added one gallon of sour milk and let it stand for a couple of hours but it made no material difference.

Both of these batches were pasteurized by holding at a temperature of 145 degrees for half an hour, then run through the homogenizer into the holding tank where the mix was cooled down to 39 degrees and held over night, which was about 24 hours, when we started to freeze the temperature of the mix in the holding tank was about 42 and we used 10 degrees brine in the freezer.

* * *

Reply: I have analyzed both of your mixes and you will find the calculations given below in table one and table two:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
800.00 lbs. 4% milk	32.0	68.36	100.36
143.00 lbs. sugar	135.88
5.50 lbs. gelatine	5.22
66.00 lbs. milk powder	62.70	62.70
90.00 lbs. sweet butter.....	75.6	75.60

1104.5	107.6	131.06	379.76
Per cent	9.7	11.8	34.4
Per cent sugar.....	12.9

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
602.0 lbs. 4% milk	24.08	51.45	75.53
116.0 lbs. sugar	110.20
5.0 lbs. gelatine	4.70
46.0 lbs. powder	42.60	42.60
80.0 lbs. butter	67.20	67.20
32.8 lbs. sweet cream 25%...	8.20	2.19	19.38
30.0 lbs. sugar syrup	15.00

961.8	99.48	96.24	325.61
Per cent	10.3	10.0	33.9

Both of your mixes are pretty nearly alike and you should not have a big difference in the amount of the overrun. Your second mix, however, contains the sugar syrup which may be the cause of a little trouble and your second mix does not quite contain the amount of sugar that the first one does, bringing your total solids down about $\frac{1}{2}$ per cent.. The sweet cream used in the second formula should help rather than retard the amount of overrun.

You stated in your letter that you tried to increase the swell by adding a gallon of sour milk to ripen the mix, thus increasing the acidity. Your formula No. 1 also had a higher acidity than No. 2, but this acidity was due to the 1.8 per cent more serum solids and not a larger amount of lactic acid.

You absolutely gain nothing by trying to ripen a mix increasing the amount of lactic acid. We have a

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order—"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

Baker Ice Machine Co.
Omaha, Neb.

large number of practical tests showing that acidity is not a factor in the overrun. Undoubtedly you just had some variation in the method of processing these two mixes which caused the variation in the overrun.

* * *

Dear Sir:—I am having quite a bit of trouble with my mix. I use the following formula for 100 pounds of mix:

17 lbs. butter, 16% moisture.
14 lbs. sugar.
.5 lbs. gelatine.
8 lbs. skim milk powder.
60.5 lbs. water.

This mix I heat to 145 degrees F. The gelatine is mixed with the sugar and added at that temperature.

It is run through the homogenizer at 2500 pound pressure. Now, where I think the trouble is, is this when the mix comes to the homogenizer it is about 12 degrees and must be held until the vat is emptied before it can be cooled. As soon as the mix is run through, it is all cooled to 36 or 40 degrees, but some of it is held an hour or so at 120 degrees.

Now, my trouble is this: I do not get the necessary viscosity and consequently cannot average more than 85 per cent overrun. The cream is ripened for 48 hours.

Reply: I have analyzed your mix and you will find the calculations below in table one:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	13.30
.5 lbs. gelatine47
17.0 lbs. butter, 84%	14.28	14.28
8.0 lbs. skim powder	7.6	7.60
60.0 lbs. water
100.0	14.28	7.6	35.65

You will notice that you have about 14 per cent butterfat and better than 35 per cent total solids. With a mix of this kind you should have no trouble in getting a satisfactory overrun.

I believe the trouble is not in your mix, but possibly in the method of processing. It is possible that your trouble might be in not using quite enough gelatine and also that your mix could stand just a little more milk serum solids.

Try using nine or ten pounds of skim milk powder and see if that will help any.

If your mix is properly aged for forty-eight hours and your freezing process carried out right and your freezer is not overloaded, I see no reason why you should not get 100 per cent overrun.

* * *

Dear Sir:—Last year you were kind enough to give us some help in locating the trouble in an ice cream mix which we were using. We are having some trouble again and would like to ask your advice in the matter. Our formula is as follows:

Ingredient	Wt.	% Fat	S. N. F.	Fat	Sugar	T.
Milk	800	3.5	67	30	...	1
Butter	143	120	...	1
Condensed	175	...	124	...	77	1
Sugar	110	...	110	...	110	1
Egg (powdered yolk)	6	...	6
Gelatine	6	...	6
Melaine (ozs.)	10
Total	1240	...	313	43

Our cream has a very good body but we are having trouble in getting it to stand up in the dealer's cabinet and also it does not dip as well as it should. The mix

trouble in the dipping is in the way it "pulls" when the disher is filled. For some time in this territory manufacturers have put out cream with only about 100 per cent overrun whereas we are getting 100 per cent overrun.

Does the use of such an improver as Meloine or similar products have any bad effect on the standing qualities of the cream?

Reply: I have checked your formula given in your letter and you will find my figures given below in table one. You will notice there that the per cent of fat is about 11 per cent, the serum solids 9 per cent, but your total solids nearly 37 per cent. You will also notice that the per cent of sugar is a little better than 15 per cent. Your trouble is not in the amount of serum solids, but rather in the total solids and undoubtedly the egg yolk, gelatine and meloine is causing the "pully" condition.

Table 1.

800 lbs. milk	28.00	68.7	96.0
143 lbs. butter	120.1	120.0
175 lbs. condensed	47.2	124.0
110 lbs. sugar	104.0
6 lbs. egg yolk	5.0
6 lbs. gelatine	5.0
10 ozs. meloine
1240	148.1	115.9	456.0
Per cent	11.1	9.3	36.0
Per cent sugar	15.1

I suggest that you reduce the sugar at least 1 per cent, as 14 per cent will be sufficient sugar, and if you desire to continue to use the egg yolk powder you had better reduce the amount of gelatine. I would suggest that you try a batch, leaving out the meloine and see if that will not overcome your trouble.

It is also possible that your dealer has allowed your cream to become rather soft. If this is the case and your cream pulls very badly on dipping, you are using too much gelatine for the amount of solids.

Dear Sir:—Will you please advise me what you consider the very best ice cream formula of a thousand pound weight, composed of the following ingredients: sweet butter, 4% milk, Merrell-Soule powdered milk, United Chemical and Organic Products Co. 6X gelatine, C. W. brand vanilla, Washburn's improver. In other words, if you were manufacturing an ice cream from the above or other ingredients we can obtain here in Arkansas and wanted to make the very best piece of goods you could, exactly what proportions and what method would you use of the above ingredients in order to make the very highest quality ice cream, how long would you age it, at what temperature would you freeze it, and what overrun would you obtain? Also, how long would you pasteurize it, and at what temperature would you emulsify it? I am using a De Laval emulsor, 1 gallon size.

Reply: You will notice that in table 1 I have used both sweetened condensed milk and skim milk powder while in the second I am making up the serum solids with skim milk powder alone. I am presuming that you have a sufficient supply of whole milk to make up for these mixes at all times.

Table 1.
1000 lb. Mix.

Ingredients	Fat	Serum Sol.	Total
96.0 lbs. sugar	92.0
5.0 lbs. gelatine	7.0
110.0 lbs. sweet cond.	29.7	77.0
25.0 lbs. skim milk powder	23.7	27.0
87.0 lbs. 84% butter	73.0	70.0
677.0 lbs. 4% milk	27.0	57.9	83.0
vanilla and improver
1000.0	100.0	111.3	352.0
Per cent	10.0	11.1	35.2

Interurban Packing Routes

By P. P. MILLER*

WHEN our secretary, Mr. Loewenstein, asked me to join in this discussion of the "Motor Delivery Problem," I promptly replied that I would have to be excused inasmuch as the organization with which I am connected had no "motor delivery problem." We solved that problem early in the year by discontinuing all out-of-town packing routes. He came back with the suggestion that if such was the case I ought to be willing to tell about it, and so here I am. Undoubtedly the question is in all of your minds—why did we discontinue the practice? You can all surmise the answer—we were losing money through it and any practice that loses money for you is a bad one, and no business can enjoy a healthy and successful growth until that unsound element has been eliminated.

A combination of circumstances caused our company to feel that unless we gave our customers in some of the outlying districts the same service that our competitors were willing to give and in some cases were giving them, we should lose their patronage. So we added one route after another until our trucks were covering the country pretty intensively within a radius of 40 to 50 miles of our plant in all directions. The area thus embraced is a typical farming country. The towns are not close together and very small in size, the roads are as a whole quite good and covered with the usual crop of road stands.

At the end of the first year we were a bit doubtful as to the success of our venture, but thought we really ought to give it a little longer trial, and so the second

* With Kirk-Maher Co. Watertown, N. Y. An address before the National Convention, October 22, 1923.

year found our trucks again speeding around the countryside dispensing good cheer and ice to our numerous enthusiastic dealers. By the end of this second year, however, facts and figures showed us in a very convincing manner that the only people who were really cashing in on our trucking routes were the gasoline station, the tire salesman and the repair man. We called a halt right then and there. This year we have had our trucks running out of the city with the result that our books are happily free from red marks so far, and we have enjoyed a substantial increase in gallonage.

I have gone into this detail concerning ourselves merely to form a background for what I have to say regarding the interurban packing route and to tie it with the idea that perhaps numerous other organizations in this great industry could tell similar stories at the present time. If a statement of what we have done can be of any use to you, I give it for what it is worth.

Do not misunderstand me and get the idea that my experience has been such that I am against the interurban packing proposition first, last and always. I believe that undoubtedly there are many localities in which this practice is being pursued in a manner profitable to all concerned, but unfortunately all of us are not ideally located. This fact, however, does not seem to stop many of us from trying to imitate our more fortunate friends.

In order to give you some idea of the interurban packing problems in our state, I wrote to a number of the manufacturers in different sections asking for their opinion on the matter. Were they running these packing routes, did they find them a paying proposition under what conditions did they think they could be made to pay, and what induced them to commence this practice? Had I not assured these good gentlemen that the information contained in their letter would be used only in a general manner, I would like nothing better than to read their letters to you.

I never thought it could be possible for an individual of the ice cream manufacturing type to rise to such heights of eloquence in denunciation of an existing policy as did some of these men in expressing their thoughts to me. Others, of course, were more calm and restrained in their utterances. Like ourselves, all have been obliged to institute this practice because someone else had started it. You know, so far, no one has ever discovered the parties really responsible for this action. Somebody has always been forced into it through the efforts of someone else, but if the burden of responsibility can ever be definitely placed, I advocate nothing less than a "shooting at sunrise" for the guilty party.

All the manufacturers stated with one exception that the out-of-town packing routes were the most unprofitable elements in their business, but felt that they would have to stay with it until some united action could be taken. Their opinions were based upon the fact that the average route only did real business on Saturday and Sunday, and also because several competing companies would run large trucks over the same territory and together sell about as much ice cream as could be nicely carried on a Ford one-ton job.

Many Different Ideas.

One man was of the opinion that a packing route in order to be profitable could not be over 60 miles in length and should dispose of at least 100 gallons of ice cream a day for a period of six months. Another stated that in the majority of localities the only profitable

THAT HOT SPRINGS TRIP IS A BRIGHT FEATURE OF THE SOUTHERN CONVENTION.

route would be one upon which you had all the business. In other words, when competition entered that particular field of endeavor, profits went out. Many other ideas were expressed along this line, but it would seem that the question is really too large to be held down or governed by a certain set of specified rules.

Judging by the frequency with which this subject is placed upon convention programs and taking due note of the expressions of the manufacturers just mentioned, I am inclined to believe that the same questions are being asked in all parts of the country, and that a frank admission of our faults and a little analysis of the faults of this packing business may be a good thing for all of us.

Competition we must all agree is a wonderful incentive to progress and is the medium through which all business must pass in order to be judged successful. Our industry, young in comparison to some others, has in its youth stepped right into this age of intensified competition, and we are waging a war of the survival of the fittest amongst ourselves with quite disastrous results. As a by-product of this competition, the interurban packing route has done its share to bring about the chaotic conditions existing in our industry today.

If any of you read the magazine called the "Nation's Business," which is edited by the National Chamber of Commerce, you will recall the seven very interesting articles which ran in different issues under the heading of "Problems of Distribution." The theme of all the articles was that we are requiring too much diversification in all lines of work with the result that ineconomical and inefficient practices are necessitated. The packing route is the result of diversified service in our industry and there is no gainsaying the fact that for most of us it has proved most ineconomical. Competition has forced

this diversification of service on the ice cream manufacturer just as it has forced it on the shoe man and the clothier, and so on. Competition has added an unnatural and unnecessary significance to the interurban packing route. It has accentuated and magnified its importance to such an extent that many of them have been swept off our feet. The majority of you gentlemen will remember that greater profits were made under more sane conditions before the advent of the packing rouse than since that time. Those same conditions will come back to us if we will but go after them.

I am purposely omitting all figures in this discussion because I feel sure that some of the other speakers will have had more experience than I in this matter will deal with it in a more detailed and concrete manner. My plea is based upon an appeal to your good judgment in the sense that you appreciate the fact that you owe something to the industry as a whole besides just to yourself. Ask yourself what the packing route has done for you, what it has done for your competitor, has it bettered the relations between yourself and your dealers, has the industry as a whole profited by the extended expansion of this policy?

The answers to my questionnaire may be taken coming from a group of manufacturers no different than any group of men you might pick anywhere, and they have claimed that the packing route had done nothing for them, that it served to intensify competition, that it pleased their dealers because they received ice for less than their needs, and that the industry had not profited. The interurban packing route is a dangerous plaything if you are not equipped to handle it and thinking that you are equipped does not equip you. How many of you men have instituted packing routes simply because your dealers demanded, because you thought you were going to increase your gallonage, or for the reason that your competitor was already giving that service?

Well, those are just some of the reasons which prompted us to take the step, but that does not mean that these reasons justify the action taken. Some of us have found that unless we stopped these routes, they would stop us, but more of you are still carrying on with the hope that somehow luck will break. It is a long shot and you would be doing a service to yourself as well as to your industry to apply the brakes before you start going down the hill. If your competitor is running a packing route over a territory covered by yourself and to all outward appearances he is making money and you are not, my advice would be to pull out and get your gallonage out of more profitable fields.

If you are quite sure that your competitor can make no more out of the route than you can and still he will not give up the practice, I would advise teaching him a lesson and there are numerous legitimate ways of doing. This may sound very drastic to some of you men, but I am firmly convinced that one of the solutions for this question is action—drastic, and lots of it.

Develop Mutual Trust.

It would seem only logical that a paper of this sort should advocate some remedy for the many ills upon which it has dwelled more or less in length. I have heard many remedies discussed but the one that appeals to me the strongest and upon which I place the most hopes for a happy solution of the packing problem embodies the idea that we must get a better grip upon that spirit of mutual trust and regard for our fellow workers which our state and national associations are trying to foster.

We are so afraid that a competitor will put something over on us that we camp on his trail, watch him more closely than we do ourselves and then because of

A Keg Buyer Becomes a Barrel User in Less Than a Year

As an example of the way demand for Mapleine Ice Cream grows—

Last December we received an initial order from a manufacturer for 5 gallons of Mapleine. He repeated in July for 10 gallons; early in August he ordered 20 gallons and 16 days later, wired us to rush him a barrel of Mapleine. In less than a year this sale for Mapleine Ice Cream!

strikes off on a certain tangent we follow right after him. Our seeming inability to make a promise and then in the face of competition to play square and carry it out is causing a lot of unnecessary worry and unhappiness in our business relations.

All the time that is spent at our annual gatherings and all the effort that goes into preparing papers to be discussed there is practically lost because we lack the courage and the trust of each other to get together in our own localities and carry out some of the suggestions to which we so heartily subscribe at the meetings. The convention discussion may help to point out the way, but it cannot compel anyone to follow it.

The convention discussion on this interurban packing problem cannot run out of business the manufacturer in your locality who through his unwise practices has proved himself to be a detriment to the industry, but it does provide the collective manufacturers in your

locality with the thought to get after this black sheep and set him going straight. The action of so doing up to your group alone.

More frequent meetings on the part of local groups such as the New England manufacturers are having will make for greater co-operation. A more intimate knowledge of your neighbor is in most cases bound to bring with it a greater feeling of respect for and trust in him. We must get out of our heads the idea somebody is continually trying to doublecross us for that, exactly the way our competitor feels about us. As long as we hold each other in mutual mistrust we shall stay in the same place and you all must agree that the solution of this packing business has been standing there a long time. Let us all make one honest effort when we go home to get together with our neighbor on this packing problem and see if all this talk won't for once bring just a spark of action.

Report of Express Committee

By THOS. H. McINNERNEY, Chairman*

THIS has been a year of more than usual activity for the express committee.

In July, 1922, the Interstate Commerce Commission instituted a general investigation into the reasonableness of rates and charges of the express carriers. We, of course, with a full realization of the serious effect on our industry of the recent high level of express rates, interested ourselves actively in the proceedings with the hope that some relief might be procured through a reduction in the rates on our commodity at least. Hearings, which we followed closely, were conducted by the commission at many places throughout the country. We employed counsel, assembled a great volume of statistics and presented our case at the Chicago hearing March 21 and 22, 1923. Our counsel also filed a brief in our behalf and subsequently appeared at the final hearings in Washington where oral argument was heard. No decision or orders have, as yet, been published, nor has the commission intimated what its conclusions will be, but we feel we made a showing of conditions in our industry which warrant relief and are hopeful of favorable results. The proceedings will be actively followed to completion and all possible done to further the interests of our industry.

Late in 1922, the Canadian Association of Ice Cream Manufacturers requested assistance in the prosecution of their appeal to their governor in council from a decision of their board of railway commissioners refusing

to grant a second class express rating on ice cream. We gladly loaned them the active assistance of Secretary Loewenstein and our traffic counsel.

Despite the fact that Illinois shippers of ice cream enjoy an estimated billing weight of 100 pounds per five (5) gallon shipment and rates lower than other states (both billing weight and rates being lower than the interstate weights and rates) it was found the shipping business in Illinois continued to rapidly decline to such a serious extent that the Illinois association filed a complaint with the Illinois Commerce Commission asking immediate relief by means of a drop of the scale numbers (approximately 20 per cent) in rate and a cartage allowance of 25c per shipment where shippers are obliged to perform their own drayage service. Our traffic counsel, with the active support and assistance of Secretary Loewenstein and this committee, handled the case for the Illinois association. No decision has been published.

Pursuant to the instructions carried in a resolution adopted at our last convention, the express committee employed counsel and in February of this year filed a formal complaint with the Interstate Commerce Commission asking for the establishment of estimated billing weights on shipments of ice cream based on 100 pounds per five (5) gallon shipment; also asking repayment. Realizing fully the importance and seriousness of this proceeding and the absolute necessity for success to insure the further development of the ice cream shipping business, our counsel, Secretary Loewenstein

TEXAS OFFICIALS WANT TO MEET EVERY TEXAS MANUFACTURER AT GALVESTON NOVEMBER 26-27-28.

and this committee spared themselves no time or effort in the preparation of the case. Our efforts to secure vital statistics from our members met with poor response at first, but we finally gathered sufficient information to build a convincing case which was presented to the commission at the hearing in Chicago, June 27 and 28, 1923. The carriers, no doubt realizing our determination and the justice of our appeal, brought forth an imposing array consisting of over fifteen attorneys and traffic officials representing the railroad interests as well as the express companies, bitterly contesting the case at every step. Briefs have been filed, but the examiner who heard the case has not yet filed his report to the commission. There is still a great deal of work to be done in this case and this committee is watching it closely, determined to carry it to a successful con-

clusion. We and our counsel are firmly of the opinion our showing should result in the relief asked for, which will put our ice cream shipments back on the billing weight basis prevailing prior to the 1920 increase.

The express committee is at all times working in harmony with officials of the express companies in the suppression and correction of traffic violations and abuses by ice cream shippers and it is gratifying to report that due to these activities the carriers have not deemed it necessary, during the past year, to impose upon our shippers any new or changed rules and regulations.

Respectfully submitted,

T. H. McINNERNEY,

Chairman, Express Committee

Cones and their Importance to the Ice Cream Industry

By J. R. WELLS*

IN these days when much thought is being given by ice cream manufacturers as to the methods of increasing their field of distribution, it may be timely to consider the possibilities of the ice cream cone, not only in respect to increased gallonage but also safety to the manufacturer's reputation.

The writer has had considerable experience in the cone field and could enumerate many instances where ice cream manufacturers have demanded absolute purity of the cone they purchase, with the result of immensely increased sales immediately following.

In these days of adulterants and cheapened products,

* Vice-President Cone Co. of America. Written for The Ice Cream Review.

it is wise for manufacturers generally to adopt a very strict attitude in respect to the cones they themselves distribute; to use every legitimate endeavor to force the retailers who sell their ice cream to use containers of undoubted and guaranteed cleanliness and purity.

On August 20th, last, the Boston Post came out with a flaming headline on its front page, announcing the fact that the health authorities had seized and condemned a million ice cream cones as unfit for human consumption. Such unfortunate publicity as this necessarily reacts on the ice cream industry generally and does incalculable harm to the trade.

Manufacturers who are indifferent as to what vehicle is used to convey their ice cream to the mouths of their children must cease this indifference for their own good. It behooves them to use every possible endeavor to see to it that the cone is on a par in respect to its purity of materials as those used in the manufacture of their own ice cream.

Again, some months ago, seven hundred thousand cones of a certain brand were condemned by the health authorities of one of our states, the reason given being that they were compounded of putrid vegetable matter and unfit for human consumption. You can well imagine the dreadful impression as to cones that must get in the minds of the people from such things as this. Mothers and fathers, if such things continue, will eventually prohibit their children from buying ice cream cones at all and the millions of nickels and dimes spent in that manner for ice cream will be diverted to purchases of fruit and candy.

All ice cream manufacturers must realize as we have seen the introduction, especially by the confectionery trade, of the very attractive five cent packages of candy and other confections which have been developed to attract the patronage of the children throughout the length and breadth of this country. Naturally, if the ice cream cone is not up to the highest of quality and attractiveness, the children will discontinue spending their nickels and dimes in that direction and naturally buy the attractive candy package, which is so freely offered today.

Is it not time that the ice cream manufacturers as a body began to take an active interest against the wretched methods of distributing their ice cream by bad cones and stopped them? The ice cream cone business is generally increasing all over the country. Truly remarkable results have been obtained wherever ice cream manufacturers have sought the business through the use of cones. Very many of the largest industrial plants

Make Holidays Your Clean-Up Days with

Reyam Fruit Custard

No need to gamble on fickle public taste—here's the best bet in years—one they all smack their lips over, Fruit Custard Ice Cream made from Reyam Fruit Custard. Easiest to handle, too, because no mixing is required. Ample fruit, color and flavor in a half-gallon to make forty quarts of the richest golden-cream fruit custard ice cream. Order it now!

Tutti Frutti Mixture

Mixed fruit ices and ice cream give full satisfaction when made with Reyam Tutti Frutti Mixture; keeps perfectly; always uniform and dependable.

Chopped Walnuts in Maple

for more Maple Walnut Cream. Holds record of 60% sales increase.

Crushed Peach and Crushed Apricot

Solid pack—cold process—for making fresh fruit cream.

Broken Assorted Glace Fruits

25-lb. pails. Complete assortment of fruits of various colors.

Cold Process Strawberries

Just like fresh berries—in barrels and No. 10 cans.

CINCINNATI EXTRACT WORKS

ECONOMY CABINETS

Mr. Manufacturer:—

You were no doubt at the Cleveland exhibition of the Ice Cream Supply Men's Association, and had the opportunity to examine the Economy Ice Cream Cabinets. These Cabinets are handsome, durable and efficient. We can supply you with any type you desire. Metal-lined and Tub-lined Cabinets insulated with granulated cork. Also Metal-lined Cabinets insulated with 3 inches of corkboard on sides and 4 inches on bottom. These cabinets are truly Economy Cabinets. Anticipate your requirements for next season and place your order early.

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

the country have adopted the cone as a means whereby ice cream is sold at their lunch counters in their plants.

The cone saves the continual re-washing of dishes, the breakage of same and loss of spoons, besides the cone itself, if it is properly made, is a fine adjunct to the meal. At many social functions, particularly at dances, in various parts of the country, ice cream cones are being passed around as a means of serving ice cream. Many of the large chain store organizations are doubling and trebling the size of their soda fountains; the enormous sales they make of ice cream cones is truly astounding.

The desire for the ice cream cone today is established in the minds of millions upon millions of children all over this country. It is up to the ice cream manufacturers to cultivate this trade for all it is worth. The cone industry generally welcomes all the novelties that may be brought out whereby any prejudice may be removed at present existing in the minds of many against eating anything out of the hand. Many novelties for eating ice cream come and go but the cone is firmly established in the desires of the people as an added pleasure in eating ice cream.

Carolina Firm Solves Problem of Keeping up With Tubs

SOLUTION of the problem of keeping up with its tubs has saved many hundreds of dollars for the Quality Ice Cream Company, Spartanburg, S. C.

A mammoth bulletin board, somewhat similar in appearance to a checkerboard, enables the Quality plant to ascertain at a moment's notice the whereabouts of all of its tubs and other ice cream containers, and the bulletin board has cost nothing except the original outlay for lumber, hooks and cardboard tickets. Since the installation of this system, the Quality plant has lost no containers and has never been forced to spend valuable time in looking for a misplaced tub.

How Record Is Kept.

When a truck starts out with its load of ice cream, its driver visits the big bulletin board and registers the numbers of the tubs on his truck. One-gallon tubs are

numbered 1 to 100; two-gallon tubs are numbered 2 to 300, and so on. Every square on the bulletin board is numbered to correspond with the numbers carried by the hundreds of tubs used to carry Quality ice cream to its customers throughout the Piedmont region of the Carolinas.

The truck driver, for instance, has tubs numbered 104, 167, 228, 13 and 542 on his truck. He places hooks firmly attached to the squares on the bulletin board yellow cards which state exactly where the tubs on the truck are going.

If tub No. 104 is going to a drug store in a nearby town, a card is hung on the hook in the square numbered 104, and this card gives the name of the drug store, the town in which it is located and the number of the street on which the drug store stands.

No driver is ever permitted to leave the Quality plant until he has attached the proper cards to the little hooks on the bulletin board.

This bulletin board is located in the office of the Quality plant, and was designed by E. W. Kennedy, the company's bookkeeper. F. C. Walter, manager of the Quality Ice Cream Company, states he has never used a system so admirably adapted to use in a busy ice cream plant and yet so nearly infallible.

Ready Check Every Night.

At the end of every business day the bookkeeper at the Quality plant goes to the bulletin board and checks to ascertain in a moment how many tubs are out, the numbers, in whose possession they are, and how long they have been away from the plant. No cards are ever removed from the bulletin board until the tubs with the corresponding numbers have been returned to the plant.

The Quality plant's bulletin board adds to the pleasing appearance of the plant office. The board is yellow, to correspond with the color of the company's big trucks, while the numbers on the little squares are red, to correspond in color scheme with the lettering on the Quality trucks.

The Quality plant has found that system pays whether in manufacturing ice cream or in keeping track of tubs. This bulletin board has stopped a leak that cost the Quality plant a surprisingly large sum annually, and a somewhat similar plan might be adopted with success by many other ice cream plants.

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

An Ideal Gelatine MIXER

This double jacketed "Harris" Copper Gelatine Mixer enables you to keep the melting mass at the correct temperature desired and the agitator produces just enough action to keep the mass uniformly in motion.

RIGIDLY built of heavy copper with every precaution toward sanitation.

Easily and quickly emptied and cleaned.

Quality Ice Cream at Low Cost

Mojonnier 3' Vacuum Pan at the plant of the
Crockery Ice & C. S. Co., E. Liverpool, Ohio.

Users of the MOJONNIER VACUUM CONDENSING UNITS have featured among its advantages, the following:

1st. **PRODUCES A BETTER FLAVORED PRODUCT.** The milk boils vigorously at 145° F. This temperature is never exceeded. This prevents any possibility of "cooked" flavor. The steam driven off and condensed contains all of the "off flavors," leaving only the real milk flavor. This method makes possible the use of fresh skim or whole milk, sweet cream or butter.

2nd. **A BETTER PASTEURIZED PRODUCT.** R. W. Peterson and P. H. Tracy (University of Illinois) in their Bulletin, May, 1922, on the "Condensation Process of Preparing an Ice Cream Mix," under caption of "Conclusions," state:

1. A uniformly prepared ice cream mix may be made by the condensation process, using milk, butter or cream, sugar, and gelatin.
2. The condensed mix is easily standardized to a uniform composition by having the butterfat, milk solids not fat, sugar, and gelatin in the proper proportion before condensing. A definite yield is thus obtained. Why reduced costs? Here are the figures on a batch made recently in a plant in Pennsylvania (name furnished on request), 11% B. F.

100 gal. Milk at .22.....	\$22.00
33 gal. 20% Cream at .90.....	29.70
126 lbs. Sugar at .07.....	8.82
5 lbs. Gelatin at .60.....	3.00

Cost of condensing in excess of pasteurizing cost..... 63.52
Total cost 100 Gallon Mix made in Vaccuo..... 64.02

Old Way—Cost of mix (100 gal. from condensed milk and cream).. 82.50
Vaccuo method—cost of mix (100 gal.)..... 64.02

Saving per gallon mix .18.....\$18.48

Saving per 100,000 gals. mix, \$18,000.00.

Ice Cream Improvers

A Reply to Mr. E. H. Parfitt. By M. WOLDENBERG*

THE discussion on Ice Cream Improvers, as contained in the Exposition Extra of The Ice Cream Review is certain to be read by all thinking ice cream manufacturers. Presenting, as it does, a frank and unbiased outline of the worth of improvers, it places improvers in the category in which they belong.

It has been the common tendency on the part of some ice cream manufacturers to view improvers as stabilizers or fillers, and inasmuch as gelatine is universally used for the purpose of stabilization, improvers were relegated to the list of non-essential ingredients. Others have construed improvers as "substitutes," and therefore undesirable ingredients to use when endeavoring to manufacture high grade ice cream. Others still, (and this group represents by far the majority, are daily deriving beneficial results thru the use of any of the standard improvers offered upon the market.

What is the reason for such a divergence of opinion? Is it because improvers, despite statements of improver manufacturers, really have no merit? Is it because of a natural antithesis of opinion? Or is it because those manufacturers who do not use improvers lack the knowledge of the scientific work which an improver, correctly used, will accomplish?

It will be the purpose of this article to set forth the facts relative to the scientific as well as practical use of improvers in the manufacture of commercial ice cream.

* Ph. D., Director of Chemical Laboratory, The Daigger Corp., Chicago.

In order to manufacture ice cream in a commercial way it is necessary to increase the viscosity of the mix in order to be assured of a uniformly good ice cream while still permitting the manufacturer to obtain the desired yield. The question naturally arises as to what viscosity is and how an increase in viscosity is produced.

According to Washburn, "Viscosity is stickiness or cohesion. Viscosity in cream or mix is due largely to the condition of the casein contained in the cream or mix. Any violent agitation, such as separation, pasteurization or homogenization breaks up the threads and shreds of the filaments of casein into tiny bits and lessens their ability to stick one to another and produce what is known as viscosity. The casein in milk is in solution, as is the sugar, but in sort of suspension. Therefore in milk we have the diffusion of an insoluble product, and to this product casein is present in minute but real threads and shreds, and filaments which wrap against and around one another and tie together much like the fibres in a rope. Imagine hemp, first in a tangle of long threads from which mass long strings can be twisted and drawn. Now imagine that hemp run thru a chopper such that the pieces are broken and cut into short bits. These bits would not hang together to form the rope. But in milk, upon standing, these threads unite to form the longer filaments again. This reunion of filaments brings about the increase of viscosity.

Increase of viscosity is produced by any one of the agencies, each of which work to the reunion of the pieces. They are:

First: Age or time. With exactly the same acid content the old cream is much more viscid than the new cream because of the thickening, or it might almost be termed clotty effect somewhat analogous to the clotting of blood when exposed to air.

Second: Acid. The presence of minute portions of natural lactic acid increases the viscosity of the product but acid if allowed to develop to slightly too high a degree, produces a brittleness in casein which lessens viscosity as well as producing undesirable flavor in the product.

Third: Enzymes. There are a few enzymes which will act on the curd to increase apparently the length and strength of the filament bundles, and which thereby increases the viscosity. These enzymes in various kinds of purity and proportion to inert vehicle substances such as powdered sugar, and these with or without some vegetable gum, are substances regularly sold as ice cream improvers. That improver is best which contains these various factors in the best proportion, purity and safety in "use."

Inasmuch as comparatively few manufacturers create increased viscosity with acid due to the danger of a resultant sour mix the most commonly used methods are thru the medium of natural ageing or by the use of enzymes as contained in what is commonly termed ice cream improvers.

It has long been the axiom that the longer the elapsed period between the time milk is taken from the cow and the time it is actually consumed, the worse the milk gets or the more possible chances there are for contamination. Safeguards are constantly being adopted by progressive handlers of milk and its products to insure as pure a product as is humanly possible to produce. Despite the extent and nature of these precautions it is generally

conceded that the quicker the handling of milk or its products, the more uniformly good and pure, will be the finished article.

Yet despite these truths, ice cream manufacturers are being constantly urged to age their mix for a period of 24 to 48 hours. Were it possible in the average plant to maintain a temperature of 33 degrees F. for 24 to 48 hours (at which temperature Hammer concludes that there was no growth of organisms that could be detected) perhaps this advice would not be in so great a contrast to the generally recognized principles with regard to the handling of milk. Practical experience has acquainted me with the fact that the average "holding" temperature of an ice cream mix is usually between 38 to 40 degrees F. and that in a great many instances it climbs as high as 45 degrees F. Under these circumstances there is most certainly a development of certain groups of bacteria which development it has been found desirable to curtail.

Improvers increase viscosity quickly in a warm mix and slowly in a cold mix. Given correct temperatures, improvers materially reduce the time necessary to increase viscosity as compared with the time necessary to allow when improvers are not used. This saving in time not only means a saving in operation in that speedier production is made possible, but also in that it reduces the possibility of bacterial development in approximately the same proportion as it reduces the time which must be allowed a mix to increase in viscosity when "naturally" aged. Inasmuch as practically the only reason why a mix is allowed to stand for a period of 24 to 48 hours is to produce an increase in viscosity, this viscosity may be increased in a much shorter period of time by the use of improvers without the probability of the

pronounced development of undesirable bacterial organisms. It is in this way that improvers control, or at least retard, the development of all bacterial organisms commonly found in milk or any of its compounds such as an ice cream mix.

It is claimed on the part of some manufacturers and improvers that they accentuate the rich creamery bouquet of flavor. While this may be stretched to a slight degree yet there is some foundation for the statement whenever correctly made. It is known that fresh milk or cream has what is known as a "clean cream flavor." It has often been experienced that a mix when held too long at low temperatures develops a somewhat bitter taste. With this in mind, a mix when handled as quickly as is practical, will retain more of the natural creaminess of the fresh materials than a mix which has been held for a prolonged length of time. In other words the assumption is that the longer a mix is held the farther it gets from the flavor that is desirable and the closer it gets to the flavor that is not desirable. This is said with full knowledge of the fact that a bitter flavor will not be produced in an average ice cream mix when held for 24 to 48 hours.

The question of yield in ice cream is at times badly abused. There are two kinds of yield, i. e., yield at the sacrifice of quality and yield while maintaining or bettering quality. If an ice cream manufacturer were approached and requested to use improvers because this use would permit of obtaining a higher yield than is then being obtained the answer might rightly be given that the maximum yield possible to obtain with the formula used was not even then taken. When an ice cream manufacturer standardizes upon a yield of say 90 per cent it is because he and the trade he caters to are satisfied with the quality piece of goods which that particular yield produces. Those manufacturers who do not receive beneficial results with the use of improvers testify to the fact that their use permits of obtaining a slightly greater yield (all other things being equal) without the sacrifice of the quality of their goods. This is caused by the action of rennin in softening the curd and making possible a smoother body.

It is sometimes said that the use of improvers means smaller and more numerous air cells. While it is admitted that the size and number of the air cells relate directly to the yield, yet experiments have been conducted with a view toward substantiating the above claim. A batch of 200 gallons of mix was divided into two parts of 100 gallons each. Each part was handled identically the same with the exception that to one no improver was added. Competitive runs were made on cream drawn when it registered 90 per cent overrun on a Mojonier overrun tester. Upon microscopical examination it was seen that the ice cream to which no improver was added contained slightly smaller and more numerous air cells than the ice cream which did contain the improver.

Ice cream improvers were originally used to permit of an increase in swell, but at present are used quite as much, if not more, for the purpose of standardizing or rendering uniform and constant the swell. If all ice cream were to have only 80 per cent swell one day, 90 per cent the next, and 90 per cent the next, it would have a disastrous effect upon the sale and consumption of the product. Not alone is it necessary that the mix have a viscosity which will permit a swell, but a certain sort of viscosity which will allow the newly made cream to be drawn from the freezer and give, essentially, if not quite as much swell in the last portion drawn from the freezer as from the first, thus creating

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

uniformity between can and can drawn from the same freezer.

That improvers have their place in the manufacture of ice cream is shown by the fact that reasonable claims made by manufacturers of improvers can scientifically be substantiated. Their value to ice cream manufac-

turers is not only apparent where there is no time ageing, but also in the work which they accomplish in pasteurized or homogenized (or both) mix. Reduced as they do the time necessary to produce desired viscosity, they are invaluable to those who believe in efficiency, standardization and progressiveness.

Cleanliness in the Ice Cream Plant

By T. S. BLAIR

OUR far-famed friend, "Mr. Just-As-Good," now seems to be enjoying his last lease on life. Law-makers, city officials, and ice cream trade organizations are actively engaged in shortening the days of this gentleman who is also known by the title, "Mr. Substitute."

The day of the cocoanut cow is passing. Many health officials have deemed that "filled milk" is not "just-as-good" as natural milk, and is injurious, unsanitary, and therefore unlawful. The use of foreign fats, gum tragacanth, and ice cream imitations is now prohibited in certain localities. Paraffine and other substances considered injurious to health are forbidden by several state legislatures. And many progressive associations of ice cream manufacturers are adopting formal agreements sanctioning only the use of materials unquestionably wholesome in ice cream production.

The ice cream trade is likewise constantly bettering itself in public favor by building the industry upon an improving sanitary basis. Just as the substitute material is now discountenanced in the "mix," so, too, are questionable methods in the securing of sanitary cleanliness discarded. This is the day of thorough and eco-

nomical results, and substitute and "just-as-good" materials are fast losing prestige.

The present demand for, and interest in the discarding of "Mr. Substitute" gives every promise of being a sane and lasting movement. Cleanliness in ice cream manufacture is not a fad advocated by overly particular customers, nor the fancy of impractical manufacturers. Sanitary cleanliness is today a paramount requirement in the manufacture and handling of any food product. And no amount of clever advertising, retail service help, or price inducement offered by the ice cream manufacturer will offset the injury resulting from belief among the trade that the product he produces is not clean. In short, there is today no substitute for cleanliness.

Cleanliness impresses one as so simple of production and so easy to maintain, that apparently little need be said about it. In fact, cleaning is usually done by the less intelligent helpers, and is often given little or no supervision. Yet this seeming simple necessity in the ice cream business is more capable of substitution, and more often accomplished by a would-be "just-as-good" material, than any other one operation. The securing of sanitary cleanliness, and especially that highly specialized cleanliness which means so much in profitable ice cream production and distribution, involves more than the application of a little water, the expenditure of some unskilled effort, and the use of just a cleaning material.

Substitute cleanliness and "just-as-good" sanitation may seem an impossible practice in as scientific an age as this. Yet there are those of the trade that still employ just such methods.

The thorough and delicate cleanliness demanded in ice cream manufacture necessitates a total absence of odor, and stale or sour grease. Equipment, containers, etc., must not only be sanitariously clean, but care must also be exercised not to clean such surfaces with greasy cleaning compounds, materials containing lye, and similar foreign substances not easily and quickly removed by rinse water. This thorough cleanliness must also be practical and economical to maintain.

Cleanliness in ice cream manufacture is mostly removal of waste and foreign greases. Does it seem economical to use a greasy cleaning agent and by so doing add other greases to produce the clean, virgin surface necessary to preserve the delicate flavors and quality of first class cream? Or would it seem more practical to jeopardize the quality and flavor of your product by burning out your utensils with strong caustic agents as hard to completely rinse as the cleaners containing a grease?

True sanitary cleanliness is far more easy and economical to attain and maintain than its "substitute" half brother, and the careful manufacturer of today is demanding that the cleaning materials used in ice cream production prove both their efficiency and economy in meeting the quality demands of the public.

Way down South in Dixie

Southerners Eat "Bread of Friendship" at Cleveland

THE thin gray line moved North again. Cleveland heard the rebel yell and was happy to surrender, turn over the keys of the city and bid cordial welcome to Dixie's ice cream hosts.

No friend of the South familiar with its greatly underrated spirit of enterprise could fail to be gratified over the magnificent showing made at the national convention by the gentleman who crossed the S'wanee river and followed their chieftians upon that trade expedition.

After many years of unrecognition, victory was all the sweeter this year. Victory came when the national association awarded the second highest honor at its command to W. W. Campbell, that courtly, courteous gentleman of long and able service in Southern organization work. In selecting Mr. Campbell as its vice-president, the national association took a step which is sure to cement the ties between the association's unaffiliated manufacturers in the South.

Decision to hold the next national convention in a Southern city also is most gratifying to men interested in the development of the South's ice cream industry. This will mean greater interest by the national association in co-operating with Southern manufacturers and aiding in the solving of their problems.

Ice cream history was written at Cleveland. The South's gallant band would not be denied. Now that it is all over, there can be nothing but genuine satisfaction in the minds of all that wise counsel was followed. Better co-ordination is sure to result—better understanding and stronger national interest.

Not just friends of the South are pleased—not just men of deep partisan pride, but every man who looks to the development and expansion of the American ice cream industry.

The association did something more than please its Southern members; it took an important step in the interest of "Ice Cream—A National Industry."

THAT Southern luncheon at the Hotel Cleveland left a very pleasant taste in everybody's mouth. Men of Dixieland met to break bread and take a cup of kindness while they formed plans in the interest of their industry.

In all the lands of earth there is no class of people

more loyal to race, section and traditions than the men of Dixie, and the good fellowship displayed at the luncheon reminded more than one man how proud he was to be a native of a section where hearts beat fast and warm and friendship is deep and abiding and a thing sacred to the soul—where homefolks love the Lord their God and their neighbor as themselves.

It was in every sense of the term a Southern luncheon with heaping plates, overflowing hearts and sharp wit expressed in drawling accents. Repartee fell thick and fast, with the Crackers of Georgia, the Tarheels of Carolina, the Colonels of Kentucky, the Volunteers of Tennessee and the Longhorns of Texas neither asking nor giving quarter.

In fancy one could see the ghosts of Patrick Henry, Bob Tombs and "Marse Henry" Watterson stalk the room as sally after sally was met by rejoinder, and victory fell as fluently and rhythmically as water flows over a stone cataract.

Brother Bill Sidebottom was sure, suh, that Vanderbilt had one of the finest athletic records of any institution, and George Boedeker awsked his pahce suh, but Texas U. has a football team in a class to itself. Whereupon that gay cavalier, J. D. Kinnett, warned everybody to know that the Crackers' state association took a back seat for nobody's organization and insisted that his neighbors should not miss the opportunity of being at their next meeting, November 15, and attending one of the best state conventions to be found anywhere, after which its members would watch the University of Georgia put the Centre College football team to rout. Yes, suh.

When the gentleman from Kentucky finally yielded, a son of old Arkansas said he took his football dope out of the sport sheet, but if you want to see the fairest ladies on earth come to Little Rock for the Southern convention and be royally entertained. If you-all were looking for a place for an exposition and the hotel was too crowded, he'd turn over his home in Little Rock to this purpose.

Mr. Cuscaden insisted that Kentucky was a state of fighting gentlemen who played extremely good football and he thought the gentlemen were extreme optimists; they hoped to find anywhere women fairer than Dixie's. But he was sure that the Arkansas gentlemen

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

very gracious and that he would not miss the opportunity to partake of that hospitality.

Important things were settled at that luncheon—preparations for a great Southern convention and other matters of state—but there was absolutely no agreement on the matter of good football teams and fair ladies. For these are points involving far too much honor ever to yield.

DECISIONS reached by the Southern officials at Cleveland settled all doubts—if any ever existed—that the coming Southern convention will be an extremely worth-while affair. It was evident that the program would have to be stretched to an extra day to get through all the business to face the convention.

It was extremely pleasing to see the association vote in favor of the Dixie Flyers' exposition. "Pete" Miller fought hard for this point, and when it was won President Mortensen, with characteristic promptness, pledged support to give the convention the best exposition possible with the facilities at command.

The last stumbling block has been removed. Everything is ready for a mighty gathering of the Dixie Clans at Little Rock, December 4, 5, 6 and 7. The decks are clear for action.

SOUTHERNERS have every reason to be proud of their delegation's showing at Cleveland. There never was a finer looking bunch of men from any section of the country than those led to the "ice cream capital" by M. J. Costa and his state lieutenants. The showing made by the South excited much favorable comment on every hand.

The idea of maintaining a separate booth for the registration of Southern delegates was a bit of progressive thought, for which Secretary J. W. Clopton is deserving of all the praise already bestowed. Men of Dixie immediately felt at home when they reached this dock and put their names down in a book that contained many names of men familiar to them for the good work they have done in the upbuilding of Dixie's ice cream industry. There were papers from home. Some received letters from home through this booth.

It was truly a gathering place for "homefolks" and for men who love their traditions of heart and hearthstone.

AT THE national exposition from the South was a long gentleman with a long idea. The gentleman is W. D. Seale, Jackson, Miss. The idea is, co-operative advertising in the ice cream industry. He told the Mississippi delegates his views on the matter last year. He holds the opinion that the time is coming when the small man must look to some step for a gigantic advertising program which will increase the popularity of ice cream. Mr. Seale believes the national association eventually will see fit to make this move in the

interest of building up its industry. In the meantime, he is hoping that the Southern association or the Mississippi body will see fit to attempt some such localized plan.

AMONG the charter members of the Southern association at Cleveland was Charlie Kent of Kentwood, La. The fact of the matter is, Mr. Kent was the organizer of the association. It was more than a decade ago that the "sage of Kentwood" decided the ice cream manufacturing business was getting to be too much of a scramble for self and devil-take-the-other feller.

Nobody from Dixie was prouder of the showing of the Southern association at Cleveland than this grand old man of Louisiana.

FUNNY how things change about so quickly. It was just a short time ago, seemingly, that friends down the country were wondering if "Bill" Sidebottom would be in shape to attend the Southern convention after his terrible auto accident—an accident that shook the frame of this mighty man from top to toe. He made it. It was a hard fight, but he made the convention. It was hard to look at him at Cleveland and remember that anything ever had happened to make that wonderful old smile come off, even for a thing like an auto wreck.

NOW, that everything has been decided upon, the rest of it is up to the Flyers. Rather a whole lot of the work for the Little Rock meeting is in their hands. Association officials, of course, have their hands full of details and odds and ends, but the fighting band led by Neil Mortensen are the people now being watched with hopefulness. The Flyers go into the very farthest outposts of Dixie, and their words carry much weight. This time their word is.

"Eleventh annual convention Southern Association, December 4, 5, 6 and 7. Come to Little Rock."

And they are coming, too, the Flyers say.

CAROLINA officials at Cleveland wanted the whole wide world to know that they are planning for a splendid convention at Winston-Salem in January. "George White showed us all a nice time at Raleigh last year, and we intend to do all in our power to make the one this year at least just as good," said President Charles Landreth.

OTHER political rumors afloat at Cleveland last month concerned the next president of the Dixie Flyers. With much good timber in sight, the name of Byron Morris seemed to stand out. Mr. Morris was elected vice-president at the session last year. He has been a conscientious member of the Dixie Flyers for several years.

THAT HOT SPRINGS TRIP IS A BRIGHT FEATURE OF THE SOUTHERN CONVENTION.

Topics of Wide Interest in Southern States to be Discussed at Dixie Convention

"All-Southern" Program Shapes Up for Representative Convention—
Delightful Entertainment Features

PLANs thus far outlined for the eleventh annual convention of the Southern Association of Ice Cream Manufacturers indicate that Southern manufacturers are counting upon an attendance representative of the entire South. The convention will be held at Little Rock, December 4 and 5, with a day at Hot Springs December 6.

The subjects to be discussed treat of things in a broad, general way applicable to the ice cream manufacturers in all parts of Dixie.

W. D. SEALE.

The program will be chuck full of interesting discussions, which will be handled by such men as W. J. Barritt of Tampa, Fla.; W. E. Drake of Nashville, Tenn.; William A. Heuser of Louisville, Ky.; Prof. A. C. Baer of Stillwater, Okla.; Harry Cuscaden of Louisville, Ky.; W. W. Campbell of Shreveport, La.; S. N. Sutton of Vicksburg, Miss.;

A. E. Dixon of Fayetteville, N. C.; W. D. Seale of Jackson, Miss.; D. W. C. Yarborough of Birmingham, Ala.; Earl W. Hodges of Little Rock, and several others prominent in the Southern industry.

This tentative list of speakers alone includes eight Southern states—Kentucky, Oklahoma, Tennessee, Mississippi, North Carolina, Louisiana, Arkansas and Florida.

Other states will be represented on the convention program, too, and the subjects the speakers are to discuss will cover all phases of the Southern industry.

Professor Baer will speak on "Progress of the Ice Cream Industry in the South." Harry Cuscaden of Louisville will speak on co-operation, his text being "What's Dumber Than a Dumb Animal?" Earl W. Hodges, prominent Little Rock business man and widely famed as an entertaining orator, will talk to the manufacturers in a sympathetic vein, his subject being "A Hot Bunch in a Cold Business."

Some of the Subjects.

Other subjects to be discussed are:
"Why the Business Man Should Attend All Meetings of His Trade Association."
"Advantages of Membership in Trade Associations."
"Advertising."
"Co-operation."
"Advisability of Carrying More Than One Grade of Ice Cream."
"Is a Charge Account of Empty Containers Practical?"
"The Ice Cream Manufacturer From a Salesman's Viewpoint."
"Should there be a Uniform Ice Cream Law for all Southern States?"

Entertainment Features.

A convention program of the highest order is assured for all visitors to Little Rock, Southern association officials believe. The entertainment features will comprise one of the brightest programs of fun on record for the association, we are told.

The Dixie Flyers, as usual, are taking the lead in working up the entertainment features.

Thus far arrangements have been made for a dance, compliments of the Dixie Flyers, on the first evening. The Ladies' Auxiliary will have a luncheon for ladies present at noon on the first day. The ladies will be the guests of the Dixie Flyers at a theater party at 2:30 o'clock the afternoon of the second day. The annual banquet of the Southern association will be held the evening of the second day. Special entertainment has been arranged for Hot Springs, to which resort the delegates will repair the third day.

ANNUAL CONVENTION

Southern Association of Ice Cream Manufacturers

LITTLE ROCK, ARKANSAS

To Members and Associate Members:
Southern Association of Ice Cream Manufacturers:

GENTLEMEN:—

We are pleased to advise that executive officers of the above association have selected the following schedules as the official route to the Southern convention, which will be held in Little Rock, Arkansas, December 4 to 6, 1923.

In order that members of our association may spend one day in Hot Springs, Ark., without additional cost of railroad fare, during the meeting of the Eleventh Annual Convention, which will be held in Little Rock, Ark., December 4 to 6, 1923, it has been decided to suggest that members purchase the "all year ticket" to Hot Springs, Ark. These tickets are on sale daily, with final limit ninety days from date of sale, stop-over allowed at all points enroute. Please see that your tickets read via the MISSOURI PACIFIC RAILROAD, from Memphis, St. Louis and Kansas City. This in order that we may all travel together on the trip from Little Rock to Hot Springs, as well as from Memphis, St. Louis and Kansas City.

We have also to request that members arrange, if possible, to arrive in Memphis the morning of December 3rd. We will visit members of the association in Memphis, and make a sight-seeing trip, have lunch at one of the leading hotels and leave Memphis via the Missouri Pacific at 1:50 p. m., arriving in Little Rock at 6:55 p. m.

PULLMAN RESERVATIONS:—Secure Pullman reservations through your railroad representative for the going trip. The Missouri Pacific representative will be at headquarters hotel, Little Rock, during the convention, and make your Pullman reservation covering the entire return trip.

The trip to Hot Springs, Arkansas, should appeal to everyone and will give us an opportunity to visit the Hot Springs National Park, wherein is located forty-six springs which gush approximately one million gallons of water daily, at an average temperature of 135 degrees Fahrenheit.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

Putting Over Ice Cream Specials in New Orleans

By F. E. ROBINSON

TODAY the public at large recognizes the food value of ice cream and the consumption of same is showing a favorable increase each year.

There is credit due all manufacturers and when we sum up the South's total there are many outstanding individuals whose years of practical experience permit

C. H. DAMPIER.

them to cope with the most popular "flowers in this field."

The Anheuser-Busch Company in New Orleans have acquired quite a reputation on their product, and incidentally we might mention that their frozen egg-nogg scored a tremendous hit in this territory. Frozen egg-nogg is flavored with the real article and possesses a truly come-back taste.

C. P. Dampier, superintendent of the Anheuser-Busch ice cream plant in New Orleans, needs no introduction. He rates the best type of constructive plant superintendents and has demonstrated in a striking way his ability in knowing the requirements of the public. Mr. Dampier was instrumental in the make-up of frozen egg-nogg, the sale of which was put over on a large scale and compliments were in order as received, for

certainly the quality represented absolutely the last word in ice cream manufacture.

Quality Moves Brick Ice Cream.

What aids the sale of package or brick ice cream? We are told by Mr. Dampier that quality is the first consideration, while the change of flavors keep them in the buying mood; and we agree with him on this point of view since we understand his specials are very tasty and his flavors are unique and popular with the trade.

The Anheuser-Busch Company are now featuring "Country Club brick" with such sherbet centers as grape bouquet, loganberry, orange, pineapple, etc., using N. Y. vanilla, bisque tortoni—Cafe parfait a la Reine, portola, etc., for the three flavor combination.

Mr. Dampier is a strong advocate of acidity control in the mix and to this subject alone has directed some little attention which has added prestige to his practical ability, and forever repaying him in dividend. While he has never posed as an authority on any one subject, he has been a source of information to many identified in the industry and has always expressed willingness to accord others a due consideration concerning matters irreverent to every-day problems.

"It's all in knowing how; but when we sum up his years of practical experience, being identified with the larger manufacturers in the North, South, and West, we can acclaim him the master of his art and extend to him some due consideration for his alert activity in keeping pace with the fastest growing food industry catering to a public who have acquired a favor for America's most delicious food.

A few shots from the lair of the Wolf Hounds who have managed to survive the terrible mythical war that has been raging in our fine law-abiding state of Oklahoma for the past few weeks. What a chance one does take in sending out a few words about this horrible war without the consent of the "King."

Of course, the writer only recognizes one King, that is Our Lord and Master, therefore he takes the chance of gaining the displeasure of one in our midst who strives to be a "King" with all the pomp and glory attached, that is the glory of one who would be, I am the Law, I am the Ruler, do as I say, are out will come. My army of 22,000 to see that you think, speak, or whisper in your dreams, just what I command, nothing more.

My what trying times we have seen in this part of the good old U. S. A. lately. But listen, men, the voters of this God-loving, God-fearing, grand state of Oklahoma went to the polls Tuesday, October 2, 1923, in the face of the threat of the 22,000 army, and cast their votes as true American citizens, walloping the daylights, and then some, out of the ones that would take away the freedom of the courts, and the ballot.

Oh, boy, but Oklahoma voters did themselves proud. Once more we Oklahomans can look up to our King, Our Lord and Master, and thank Him for all that

SX BULLETIN AGAIN A CONVENTION FEATURE.

Delegates to the national convention again were treated to the pleasure of keeping up with odds and ends at Cleveland through the SX bulletin, a publication that the Essex Gelatine Co., Boston Mass., has formed a habit of presenting at every notable gathering of ice cream manufacturers. The SX bulletin first was seen at the Southern regional exposition in Atlanta in 1921. Lewis B. Esmond, salesmanager of the firm, is editor. His associates are Robert S. McFarland, Harry M. Colman, Erwin B. Richardson, John J. Treacy, Stanley Casler and Marshall D. Beuick. As usual it was published daily through the national convention and was a bright feature of the week.

THE DIXIE FLYERS' LITTLE SISTER.

GENTLEMEN of the Southern trade, meet "Baby Dixie"—going and coming.

The charming little lady shown in the accompanying photograph is the little sister of the Dixie Flyers and the Southern Association of Ice Cream Manufacturers.

Baby Dixie, Looking Both Ways for Daddy.

facturers. She is Miss Dixie Miller, Birmingham, Alabama, goin' on three years old, if you please, sir.

Miss "Dixie" Miller is so-called after the Dixie Flyers by her father, P. N. Miller, Jr., She first saw the light of day April 7, 1921, when Mr. Miller was president of the Dixie Flyers. Her real name is Ida August, named for her mother, whose sad death a year ago left her in the tender hands of her big sisters in the Miller household and her big brothers in the Dixie Flyers.

So it is that as "Baby Dixie" grows older, chubbier and more dimpled, the name "Dixie" sticks, and many of her friends don't know she ever had another name.

She has blue eyes and dark brown hair, and is the "big boss" in the Miller family.

All Southern ice cream men who have business in Birmingham are assured of a welcome at the home of the Dixie Flyers' little sister, "Baby Dixie," goin' on three.

MISSISSIPPI ASSOCIATION TO MEET JANUARY 8 AND 9.

Dates for the annual convention of the Mississippi Ice Cream Manufacturers' Association were set at January 8 and 9 by Mississippi officials who held a separate conference between sessions of the national association at Cleveland. President S. N. Sutton said his members are awaiting the convention with much eagerness. Secretary N. D. Brookshire, Meridian, announced that work immediately will begin toward a convention program. Laurel is the meeting place. Hotel Pinehurst is to be convention headquarters. The Mississippi convention always is one of the best state meetings in the Southern ice cream industry. The convention last year was largely attended.

Annual Convention

HOTEL MARION

Little Rock, Ark.

December 4, 5 and 6, 1923

ONE OF THE "ROSES OF LITTLE ROCK" AIDS IN SOUTHERN CONVENTION PREPARATIONS.

Who says there is no romance in trade? There is a pretty romance in connection with the coming convention of the Southern Association of Ice Cream Manufacturers, to be held at Little Rock, the "City of Roses," December 4, 5 and 6. It is the romance of a young lady who sits before the keyboard of a typewriter in the

MISS HELEN CARMICHAEL.

plant of Watson & Aven, Little Rock, and sees something besides the cold, glistening ivories before her. She sees the part that she can play toward advancing Dixie's ice cream industry.

The young lady is Miss Helen Carmichael, the understudy of officials planing the Southern convention and exhibition. Miss Carmichael is the daughter of the secretary of the National Ice Cream Co. of Little Rock and herself is secretary to F. T. Watson, head of Watson & Aven.

When plans first were being shaped up for the gathering of the Dixie manufacturers, it was necessary to have someone at Little Rock stay in close touch with all pre-convention matters, giving them such attention as no busy ice cream manufacturer could ever afford.

"But who can do this?" officials asked themselves.

"I can," said Miss Carmichael, and she is doing that very thing. No one is more enthusiastic over the outlook for the convention's success than she. Registration of booths for the exhibition are being made through E. A. Watson, president of the Arkansas Ice Cream Manufacturers' Association. Miss Carmichael is keeping track of everyone of these registrations, and in addition is helping members of the association arrange for their registration.

DIXIE MAIL BAG

UNION ICE CREAM COMPANY'S NEW PLANT

I have just returned from a trip to Memphis, Nashville, Knoxville and Birmingham. Found all the ice cream makers hard at it making the best ice cream in the world. By the way, a friend of mine, just returned from a three months' trip to Europe, tells me that the

Mr. and Mrs. Gordon Moublo.

ice cream over there is not ice cream at all compared to our American product.

While in Nashville I was very much impressed with the Union Ice Cream Company's new plant. Mr. Drake and Mr. Rose were as busy as bees looking after the product that "has made its way by the way it's made" Union ice cream. And their city salesman, Hartwell Weatherford, is a prince of fine fellows. I spent a week with him, going over the trade there, and was delighted and surprised to find nearly 80 per cent of the ice cream places in Nashville were handling our cones.

Novelties in dispensing ice cream come and go, but the cone stays on and its use is increasing tremendously all over the country. Among the reasons for its increase is the instinct of children to lick or suck a creation, rather than to bite it. Therefore the cone should be one that absolutely can be relied upon for purity and thorough cooking, as well as an aid to absorb the liquid which results from some of the ice cream melting.

Also the immense automobile trade is helping the industry. The "always in a hurry" automobilists generally haven't time to stop for a soda or a sundae, and the ice cream cone is a convenient means of consuming ice cream in transit.

GORDON L. MOUMBLO,
Chattanooga, Tenn.

TOPICS OF WIDE INTEREST IN SOUTHERN STATES TO BE DISCUSSED AT DIXIE CONVENTION.

(Continued from page 100)

ected through the prompt action of the Arkansas Ice Cream Manufacturers' Association recently.

On October 2 a bill was introduced in the special session of the Arkansas legislature levying a five-cent tax on the gross sales of the retailer on all soft drinks, ice cream, chewing gum and toilet articles, and making it compulsory for the manufacturers to keep exact records of all goods delivered to the retailer.

The following day a meeting of the retail druggists was held to fight the bill. The ice cream manufacturers and other manufacturers effected a meeting on October 3 to take up the fight.

One of the representatives reported that approximately 12,000 telegrams protesting the passage of the bill were received at the capital in one day. This strenuous action resulted in the special session adjourning without the bill being called up for a vote.

DIXIE FLYERS ANNOUNCE ICE CREAM EXPOSITION DETAILS.

The ice cream manufacturers from the South, at a luncheon held at Cleveland during the national association meeting, expressed the desire that the Dixie Flyers put on an exhibit at Little Rock, the best possible in space they were able to get.

The Dixie Flyers will do this, there will be thirty to forty booths available, 6x8 feet, uniform in size and decoration, signs printed, chairs and tables furnished at an expense of \$15.00.

In order that there will be no confusion or misunderstanding it will be necessary for the boys who want these exhibit spaces to notify Miss Helen M. Carmichael, Watson & Aven Ice Cream Co., Little Rock, Arkansas, who is assisting the secretary of the Dixie Flyers during the convention period.

Several spaces have been allotted to parties the secretary has seen. There are still about 25 more to be had, and as they are received they will be given out and promptly notified promptly.

Kindly co-operate with your officers of the Flyers as much as possible. We want to do everything we can.

P. N. MILLER, JR.,

Secretary and Treasurer.

Southern Officials Complete Convention Plans at Cleveland Conference

An Exposition by Dixie Flyers, and a Large Attendance from All Southern States Assured at Conference between National Convention Sessions. Three Days' Convention Sessions at Little Rock Probable.

ARRANGEMENTS for what Southern officials believe will be Dixie's greatest ice cream convention were virtually completed at a luncheon-conference of association officers and members at the Hotel Cleveland the second day of the national convention. Officers of Southern state associations took part in the conference and gave their counsel.

Developments at the luncheon were:

1. There will be an exposition staged by the Dixie Flyers.
2. It will be necessary to add one day to the program to finish the business to come up.
3. Arkansas manufacturers are all ready for the reception and entertainment of visitors.
4. The Dixie Flyers have their plans well in hand and are "all set" to do their part toward making the convention a great success.
5. Interest in the convention is wide-reaching and the association's largest convention attendance is expected.
6. Arrangements for an interesting, instructive, well-balanced program have been made, and entertainment plans thus far formed assure much fun and frolic for the delegates and their ladies.
7. The spirit of understanding and good-will is highly developed among Southern manufacturers.

"Good-will" was the keynote of the conference, which was a very good convention itself. Manufacturers of different states vied with each other as to what state would have the best attendance at the Dixie convention and work more toward making the convention a success.

All Dixie Behind Convention.

It seemed that all Dixie stood to the front and, through these men as their spokesmen, formally put itself behind the efforts of Southern ice cream officials to hang up new records for Southern conventions.

The Little Rock meeting, which will be held December 4, 5, 6 and 7, will draw a monster attendance, officials felt assured after hearing the views of men from the different states.

Harry Cuscaden and C. L. Vahlkamp, representing the newly formed Kentucky Dairy Products body, pledged a large attendance from the Blue Grass state.

W. M. Sidebottom, George A. Decker and W. E. Drake, Nashville manufacturers, said Tennessee would make its usual good showing. Charles E. Landreth, Winston-Salem, president of the North Carolina Ice Cream Manufacturers, and A. E. Dixon, Fayetteville, secretary, said North Carolina could be counted upon. They invited everybody to attend their state convention at Winston-Salem in January.

J. J. Sullivan, president of the Texas Ice Cream Manufacturers' Association, and George Boedeker, presi-

dent of the Texas White Caps, said Texas would be represented at the Southern convention. They invited Southern association members to attend their convention at Galveston this month, promising them "a war time."

They were supported in this promise by H. P. Olse, president of The Ice Cream Review, who told the Southerners that since attending his first Texas convention he has never heard the words "steer" and "white caps" without trembling.

A feature of the convention highly pleasing to Southern officials was the assurance that Oklahoma and Texas would have delegates to the Southern convention. This

will give the convention the most representative attendance of any convention in its history, said J. W. Clopton, secretary of the association, whose enterprise made possible the luncheon at the rounding up of the Southern delegates to the national affair.

J. W. Sullivan, Enid, Okla., president of the Oklahoma Association of Ice Cream Manufacturers, after extending a cordial invitation to attend his association's convention this month, said Oklahoma would be found on hand for roll-call at the opening of the Dixie session. Mr. Parker was proud of the reputation Oklahoma enjoys as one of the best state associations in the entire country.

To Break Convention Tradition at Memphis.

What will be a pleasing feature of the visit to Little Rock developed at the session when Secretary Clo-

pton "invited" his members to be the guest of Memphis manufacturers at a stop-over in the "Bluff City" on their way to Little Rock. This instantly brought to the feet S. S. Dent of Fortune's, Inc., Memphis, who told his Southern friends that Memphis would be delighted to entertain them for a few hours while in the city. Plans, he said, will be worked out to break the monotony of the ride with "a little social stuff" in Memphis. James Nelson, C. Nelson Manufacturing Co., instantly was anxious to know if he would pass through Memphis on his way down. Similar questions were asked by many others.

A matter of principal discussion was that of the Dixie Flyers' exposition. This had for some time been hanging fire because of the doubt in different official minds that there would be sufficient space in the hotel available for this purpose at Hotel Marion.

"Pete" Miller outlined his steps in the matter and earnestly requested that a discussion be brought out

Southern Attendance Features National Convention

The Southern ice cream industry was strongly featured at Cleveland. Approximately 100 of the leading manufacturers of the South made a splendid appearance among the delegates from far and wide.

At the close of the convention much favorable comment was heard from many manufacturers of other sections upon the enterprise of J. W. Clopton, secretary of the association, in establishing a registration booth for Southern delegates, where Southerners formally registered after visiting the national booths, just as though they were at their own convention, though no Southern badges were provided, of course.

Papers from Southern home-towns were provided at the Southern registration headquarters, and many gentlemen from Dixie were seen scanning with eager eyes the news in the Birmingham Age-Herald, the Nashville Banner, The Atlanta Constitution, The Louisville Herald, the Arkansas Democrat the New Orleans Times-Picayune, the Memphis Commercial Appeal, and many other Southern dailies.

The Ice Cream Review co-operated with Southern officials in maintaining this booth.

MENTION "THE REVIEW"—IT IDENTIFIES YOU.

see if such an exposition could be made possible. M. J. Costa, Athens, Ga., president of the Southern Association of Ice Cream Manufacturers, asked for the Southerners to "speak right out"—and they did.

If adequate space was holding back the gentlemen, E. T. Reynolds, Valley Ice Cream Co., Camden, Ark., said he would be glad to run down to Little Rock, where he has a home not in use, and join manufacturers of that city in plans to provide the space. This brought forth a round of cheers.

President M. J. Costa's Convention Face. Snapped following the Southern Conference at Cleveland.

Big Southern Exposition Near.

James L. Nelson, veteran supplyman and widely known among Southern manufacturers, expressed himself in sympathy with the Southerners' wish for an exposition, but declared that it was the opinion of supplymen that such expositions were rarely profitable to any extent to justify holding them. He said he was anxious to see plans worked out whereby an exposition could be arranged

for the South by The Association of Ice Cream Supply-

men, but added that at a conference of supply association officials earlier in the week nothing definite along that line had been done. St. Louis, a border city priding itself as more or less of a Southern city, is under way with plans to erect an \$8,000,000 exposition building which would be admirable for an ice cream show, he said. He regretted that it is not near completion. A great Southern exposition is an early prospect, maybe at Memphis, he said.

President Costa told the members that the prime purpose of a trade association is, "the inspiration members get from social contact with each other and the good will and understanding thereby developed. But," added Mr. Costa, "if we have a display, it will be made more interesting for delegates and thereby help convention attendance."

W. W. Campbell, Shreveport, president of the Louisiana Ice Cream Manufacturers' Association and past president of the Southern association, moved that the Dixie Flyers be asked to give as good an exposition as possible under prevailing conditions.

The vote found 49 for the exposition and 13 oppose.

Local Topics Discussed.

Local topics developed in the middle of the conference, and for a considerable length of time different state officials held sway with words of eloquence concerning the good work their associations are doing, always placing credit upon the support of their membership. The North Carolina association, a Southern official reminded the gentlemen, won high honors at the 1921 convention of the Southern association when it attended 100 per cent strong, taking away the prize for attendance. The Carolinians' modest secretary, A. Dixon, smilingly bowed his thanks for the applause that followed.

S. N. Sutton, Vicksburg, president of the Mississippi Ice Cream Manufacturers' Association, informed the gentlemen that his association had decided upon January 8 and 9 for its convention this winter, Laurel being the scene of action—with plenty of action assured, according to this popular official. He was sure that Mississippi's past good record for lively conventions at least would be upheld.

Southern Association President M. J. Costa told what his home association is doing for the good of the cause. "We meet in Georgia every time the moon changes," said the genial "Mike," who is the idol of the Dixie manufacturers. "Our next meeting will be held November 30 at Athens. Incidentally, the University of Georgia will try conclusions on the gridiron with Centre College on that day. "We are sure to have lots of fun—always have it."

J. D. Kinnett, Macon, Ga., president of the Cracker association, assured everybody that his members would be pleased to have them attend their convention.

J. G. Sherrer, Ashley Ice Cream Co., Charleston, S. C., secretary of the South Carolina Ice Cream Manufacturers, rose when President Costa introduced the "baby" association of the industry. Mr. Sherrer said his recently organized association will meet at Charleston in November. The gentlemen were invited to attend.

Exposition Plans.

At the close of the discussion on the Dixie Flyers exposition, President Neil Mortensen, Louisville, gave assurance that everything possible toward a good exposition would be done. He said the Flyers would never be found wanting in supporting the Southern convention.

Following the meeting P. N. Miller, Birmingham, announced plans for the exposition. He said there would be between 35 and 40 booths available, uniform 6 by 3

EVERY MANUFACTURER IN OKLAHOMA SHOULD BE AT TULSA NOVEMBER 21-22-23.

Ladies' Auxiliary to S. A. I. C. M. and Other Organizations

TENNESSEE LADY EXPECTS LOTS OF FUN AT LITTLE ROCK.

After reading Mrs. Geisel's letter appealing to the ladies to attend the Southern convention at Little Rock, I cannot refrain from urging them to attend for I know by experience that they will have a most profitable and enjoyable time, during every moment of the entire three days.

Last year I was fortunate enough to be able to attend the convention at New Orleans thanks to the suggestion of some of our Dixie Flyer boys. When I first arrived I had my doubts as to whether I would enjoy myself or not, but in a short while, after meeting the members of the Dixie Flyer Auxiliary, all doubts were dispelled and every moment proved a pleasant one.

Personally, I am interested in the coming convention from a business as well as a social standpoint. Having been connected with the ice cream industry in Chattanooga since its infancy, and having seen the industry grow into its present size, I am naturally interested in the valuable information and suggestions, that are offered during the convention. Last years convention convinced me that it is essential that we attend such conventions if we are to get the most out of our business.

The fact that our Dixie Flyer boys—Mr. Pete Miller, Dr. Ben Brown, Mr. Morris, Mr. Anderson, Mr. Robin-

son, Mr. Stewart, Mr. Crouch, and numerous others provide for the entertainment of the ladies is sufficient to assure an enjoyable time for all.

I again urge the ladies to attend the Little Rock convention and extend to any who may pass through Chattanooga any time a most hearty invitation to the Peerless Creamery Company. A hearty welcome always awaits the members of the Dixie Flyer Auxiliary and the Dixie Flyer boys in Chattanooga.

RUTH O'NEAL DAWSON

HOLLY MADE GENERAL MANAGER OF ST. LOUIS PLANT.

A. P. Holly, general secretary of the Indiana Manufacturers of Dairy Products and widely known for his work with that organization, has resigned to become general manager of the City Dairies, St. Louis. He will be succeeded by Robert Hammond, who has for some time been at the head of the creamery license bureau at Purdue University, and is well known in Indiana.

The City Dairies Co. recently was purchased from Sampel Spleen, St. Louis agriculturist, by the Fries Ice Cream Co. Officers of the company, which is incorporated at \$25,000, are: William Jones, president; M. Antrim, vice-president, and Mr. Holly, secretary, treasurer and general manager. Directors are: Messrs. Antrim, W. R. Griffith, A. E. Jones, F. E. Hamilton and Mr. Holly.

The plant will be one of a chain of Fries plants with other factories at Fort Wayne, Indianapolis, St. Bend and Terre Haute, Indiana, and Columbus, Akron, Ohio.

A farewell dinner was given Mr. Holly late in October, about seventy friends breaking bread and wishing him luck. He was presented by his friends with a silver umbrella in the name of the Indiana Manufacturers of Dairy Products.

PENNSYLVANIA FIRM ERECTS ADDITION

The Fries Ice Cream Company, 136-144 Maple street, Reading, Pa., is erecting an addition and making improvements to their plant at an approximate cost of \$23,000. It is expected that the plant will be completed about March 1st, next.

A 24x110 foot concrete block garage will be erected with frontage at 137 South Tenth street and connected with the rear of the Maple street plant. It is designed to accommodate the twenty motor trucks used in the firm's business. The garage will be completed about December 1st.

Immediately thereafter the contractor will begin work on a 30x60 foot brick and concrete addition to the freezing room. This will house a new ice manufacturing unit with a capacity sufficient to produce all the ice required by the company in the manufacture of ice cream.

A new and modern refrigerating system will be installed in the ice cream manufacturing department.

J. M. Fries is president of the company, Clayton Fries is general manager and E. A. Fries is treasurer.

You can find the person who will be glad to buy or sell what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

methods of this manufacturer in his 'bulletin "S Talks."

Since then we have been successful in efforts to photos of the plant, which are herewith presented.

Mr. Weatherly for a number of years has been prominent in national and coast association work. He moving spirit in the Pacific Ice Cream Manufacturers Association, which meets at Vancouver next month.

SOME SOCIAL STUFF

Picked up at the Convention

The North Carolina group, as usual, made a showing at the convention, headed by that excellent gentleman, Charles E. Landreth, president of the Carolina association. The Carolinians led the Southern states attendance.

* * *

Chicagoans attended the convention in a body, making an impressive showing.

* * *

The Pennsylvania delegation arrived in a private car and the Keystone gentlemen were much in evidence throughout. They are not keeping it any secret that they are expecting a large crowd for their own convention at Hotel Penn-Alto, Altoona, Pa., this month.

* * *

Among representatives from the Pacific Coast was Fred Martin, Spokane, past president of the national association, and C. J. Alfred, president of the California and Southwestern States Ice Cream Manufacturers' Association. Mr. Alfred is a strange Californian, not refraining from discussing the Golden State but showing keen embarrassment when others attempted to do so.

* * *

Greetings to President Calvin Coolidge were extended by ice cream manufacturers of the country at Cleveland, ice cream manufacturers of Cleveland contributed a brick of ice cream to a tub to be sent the president with the ice cream men's card of greetings.

* * *

S. N. Sutton, president of the Mississippi Ice Cream Manufacturers' Association, motored to the convention from his happy home at Vicksburg, Miss., going by way of New York and Canada, and cutting in at Niagara Falls "to make the trip short."

* * *

Jack Gumpert had a heavy secret, but those who shared it, for some strange reason, do not care to tell anything about it.

* * *

A. H. Anderson, Massey & Massey, up to the convention with the gentlemen from the South, had lots of engagements at Cleveland and all of them were not of a business nature. A charming young Southern belle was one of his constant companions.

* * *

James J. Sleight, for many years connected with the Frankling Sugar Co., Philadelphia, has taken charge of this company's service department, it was announced at the exposition. Mr. Sleight is widely known in the industry. As "Jim" Sleight he is popular in ice cream manufacturing circles in many sections.

A Convention Diary

A Modern Samuel Pepys Records Adventures at "Ice Cream Capital"

I Arrive at Convention and Meet Early Adventures.

MONDAY, OCTOBER 22: Up betimes after a night of great unrest in my jolting railway carriage. To bags and razor and brushes and I was fair presentable, though with mind so strong at wondering as to who would be at the convention, these preparations were much too hurried for correct toilet.

Then to my compartment again, and the sinegambian who nigh brushed off my vest button and watch charm was put out when I rewarded him only with 15 cents. A rude fellow, I thought, as I sought a gas conveyance and gave directions to the convention hotel. The operator of this vehicle likewise was surly when I read his meter and gave him only exact change, much to spare his soul from the taint of extortion.

My way to the registration booths being interrupted by so many happy fellows of gracious speech, unmistakably glad to see me, my good humor was restored by the time I had received my delegate's badge.

Mr. Charles Morris, our worthy president then was waiting with cordial handshake and usual courtly manner. I was set to wondering at his great enterprise in being so early abroad and looking after his duties. My own purse, I doubt not, would be much fuller had I more of this great industry. I was struck with admiration at the president's pure speech, the employment of good grammar being so singular in this day with our rising young introducing so much jazz vernacular and sporting talk.

INTO the convention hall and amazed at the others ahead of me. Also at the more arriving. Verily, friends in trade are showing much interest in the affairs of others, and more particularly their own no doubt.

The president's excellent annual message had sooner left me in approving frame of mind than the speakers were telling me much that I did not know about my business.

Dr. Downey, youthful in appearance, was familiar with the subject of "Edible Gelatine" so much that he said profited my own mind. Great faction over our own affiliation came to me when Roszell, an excellent gentleman from Illinois, told advantages of membership in a trade association. A gallant Southern gentleman, Mr. Campbell, far traveled from his Louisiana home, gave me much resolve to attend every meeting when he told why the business should attend all sessions of his association.

* * *

LEAVING the convention chamber and a gentleman encountered me with an invitation to visit the exposition building, which I did. A good company, having heard much good report of the exhibit through this gentleman's excellent publication, The Ice Cream Review. This gentleman's kindly espied many happy acquaintances en route, all of whom familiarly addressing him as "H. P." for some peculiar reason. Possibly that counts like "Horse Power" in name he can well bear with grace and merit. Proud was I to be in such congenial company.

* * *

I See A Noble Exposition.

ARRIVED at the exposition, housed in a noble building, and quite amazed at the magnificence of all. Many products were there to see and explanations in abundance as to their usefulness. Cheerful and courteous were the gentlemen displaying their wares. Very generous were they in filling pockets with souvenirs, though more important was their facts concerning the equipment used in my factory—and that which should be used.

Over 2 large floors of these magnificent displays we walk, and right tired was I at reaching the hotel where haste was made to dispatch to home a telegram shamefully neglected, telling of safe arrival.

Then to the tub and the razor and brushes again to make ready for an evening of festivities, provided the gentlemen of the supply association which I am not be content with presenting a wonderful exhibit but had to show their hospitality with a very elaborate program of entertainments, covering most every evening of the week.

* * *

I Make Merry With Friends.

AT the Hotel Cleveland by 7 of the clock and a goodly company already there, with much shaking of hands and making merry. Many hours it seem that our frivolities continued and yet so agreeable were we all that we lingered over many friendly and pipes and cups of kindness—mayhap far too long of the latter for the peace of my very annoying science, for indiscretion is very foreign to my accustomed life of simplicity and prayerfulness.

Then to my room, thoughtful over the interesting

coaxing of friends, which makes one, usually so strong in resolve, powerless to resist.

Making ready for bed and thoughts were upon my wife, poor wretch, alone though not wholly without friends, and scarce could I help regretting not to be there to put out the clock and wind the cat and to whisper with her the prayers for which I now had little feeling but shame to my Godless evening.

Then to bed and troubled sleep was my lot, with strange dreams of friends beckoning to me with faces which I dislike and did not want but hated to have me effrontery to offend with unwonted virtues.

But I know that in many ways the day was well spent.

* * *

I Pass An Eventful Day.

TUESDAY, OCTOBER 23: Early awake and wondering at all the tumult without. The sound of the rain being not unlike the stormy clapping of the previous day, my first thought was that I had, quite unforgivably, dozed during a speech. But heavy sheets of water without showed me that a storm had been raging for some time.

To my tub and after a brisk rubdown, into my clothes. Dressed with grave misgivings over my seemingly gayety of the past evening, wondering if my disappointed over my actions must have been my friends who understand my profession of Godly scruples.

A cup of coffee and toast brought another cheerful frame of mind. Back to the convention hall and more excellent speeches, thought great embarrassment overcame me, when a gentleman from England, who our industry is just being undertaken, told of his company's great care in recording details of cost, and truthfulness would not allow me to stand when a worthy president asked for all his members similar diligent in cost facts to rise.

Other interesting speeches, and again to the exposition, where hours passed quickly in visits at different booths. Then back to the hotel, a conscientious toast and with a number of elegant ladies and gentlemen repaired to an elaborate banquet provided by the association. So numerous were the guests, two floors were required, and much fun and merriment were there following the partaking of delicious dishes. Dallying and then to my room and to bed, much wearied in body.

* * *

More Good Speeches—And Fair Ladies.

WEDNESDAY, OCTOBER 24: Up bedtimes and to the convention hall early. My note book already well filled with facts imparted by others again was in demand. A morning thus profitably passed, I contented with a short visit at the exposition and then strolled the streets of Cleveland, greatly amused and thused over the bustle of this growing city.

Fair ladies in the convention party were whisked by in cars, provided for their entertainment, some by graceful matrons from the South, a section rich in feminine fairness.

In the evening across town to the Masonic Temple where the supply association provided a smoker for gentlemen, and most of us had little trouble remembering it was for gentlemen, though our ladies would have wished fewer cups for us, which was no fault of the association.

Then to the hotel and to bed and thoroughly convinced I was a veritable scapegrace, though I had profited much in knowledge and diversion.

I Discover Excellent Qualities In A Competitor.

THURSDAY, OCTOBER 25: The convention session was fairly under way when I finished a conference with some supply gentlemen and had given them the privileges of sending some equipment to my manufactory on approval. Much struck by the continuing great interest as shown by the large audience. The good speeches heard fairly justified this interest.

To the exposition with some friends, and in the par with us my neighbor Brown, whom I suddenly found to be a most likable gentleman, fully imbued with good qualities I was ashamed not to have discovered before.

To the supply gentlemen's wondrous "dance capable" in the evening for a merry time. Then to the hotel and to bed.

* * *

FRIDAY, OCTOBER 26: The convention sessions being over, the day was taken up at letter-writing in the morning, the exposition in the early forenoon and to an amusement ball in the evening. More letters later and then to bed.

* * *

A Friend In Distress Borrows My Nightshirt.

SATURDAY, OCTOBER 27: After another eventful day at the exposition, and many interesting chats with friends, now making ready for train, bags and baggage fixed, and awaiting young bandit who is on his way, according to the bellboy captain.

Much amused, however, over great discomfort last evening of my huge friend of The Ice Cream Review, who wished to borrow a night shirt, having lost his and blaming his embarrassing predicament upon a scatter-brain young associate editor, who shared his employments room and departed earlier, packing the huge gentleman's ample nightshirt and leaving his own inadequate pajamas behind for that indignant gentleman to look upon with scorn. No doubt, the absent-minded associate editor, unhappy youth, now is trembling in great dread of the wrath which must overtake him and—

But here's the young bandit for my bags and as I have only a thousand dollars in broken change left in my purse I, too, am in great danger and need my friends' prayers. But maybe he'll take pity upon my dire straits and great embarrassment and give me a tip.

❖

SHOTS FROM SX CONVENTION BULLETIN.

The New England boys arrived in well-filled squad. They have made the highest average attendance in record.

* * *

It seems good to have a chance to give L. M. Hendon of Baltimore, the glad hand once again.

* * *

"Stick" and Charlie Noyes sauntered down from the Pine Tree State and are looking us over to CONTRADICT new ideas.

* * *

Harry Forrey, of the York Sanitary Dairy Co., is in great demand, we are told, but we cannot seem to locate him. Where do you keep yourself, Harry?

* * *

James Owens, together with his side-kick "Si" Barnes, have traveled all the way from the Fussell Young Ice Cream Co., at Washington, D. C., to be with us. We hope they will complete the week in our company for they are always good fellows to have around.

* * *

Our old friends, Gentleman Bill Sutton, of the Mission House Ice Cream Company at Cambridge, Massachusetts, gazes upon us once again with his winning smile.

LIKE the Proverbial Acorn, The Olsen Publishing Company has grown to a mighty oak, spreading its many branches of service to all ends of the dairy world.

Its publications, The Milk Dealer, The Ice Cream Review and the Butter, Cheese & Egg Journal have long ago been recognized as leaders in their respective fields. They have maintained their prestige only on account of the service rendered to the dairy industries.

And with the sturdy growth of this business of Service to the Dairy Industries, a mighty printing plant has been developed.

The advertising and printing needs of the dairy industries is a specialized line to which our organization has devoted its entire energies. Profit by commanding our experiences. No obligation to you to submit your advertising and printing requirements for comment and quotation.

CONVENTION FLASHLIGHTS AND SIDELIGHTS

By AN OBSERVER

GENERAL satisfaction was the feeling prevailing at the twenty-third annual convention of the National Association of Ice Cream Manufacturers was drawing to a close. In more than one way it was the association's greatest convention, in the opinion of officials and other observers who have followed the career of the association with more or less interest. Outstanding features were the large crowds at business sessions, a remarkably well-balanced program, a splendid spirit of congeniality and very able addresses upon important trade topics.

If for no other reason than the spirit shown, the twenty-third annual convention well may go down as the industry's greatest. Officials have every reason to feel elated over the outcome as a whole, but it was particularly the friendly, open-hearted manner in which delegates mingled and chatted that spoke so well for the success of the association's purpose, with due regard to the many other important purposes of the association, to recognize that the association's chief use and function is to advance understanding, is a viewpoint from which there is no escape.

There is no doubt that many men left Cleveland fully content that the ice cream industry is taking rapid strides in advancement, the national association is reaching great heights of usefulness, and fellow manufacturers are men fully worthy of trust and confidence.

Call that convention a success which reflects so much pleasing evidence that understanding is developing among men of the trade.

THE ice cream industry is growing. All of us have been understanding that for some time, but the Cleveland convention and exposition showed us that the industry already has attained far greater growth than most of us have realized. What is more important, it gave striking evidence that the industry's advancement is along lines of security, wide-reaching.

The Second National Ice Cream Exposition was an affair such as to do credit to any industry. It certainly takes its place among the trade expositions of the ten leading industries of the nation, with only the auto shows eclipsing it to any marked degree.

Cleveland's Public Hall, possibly the greatest exhibition hall in the country, with the exception of New York's Hippodrome, was utilized to the last nook and corner and crevice. The only reason there were no more exhibits is, there was no more space without infringing upon the space for visitors. Ninety thousand feet were devoted to showing the manufacturers the varied products that offer the way to advancement in the ice cream manufacturing business.

Virtually every section of the country was represented. Attendance was up to all advance promises. They came on trains from near and far, and in autos from distant points. There were gentlemen from foreign countries. It was the industry's most representative convention.

The ice cream industry is growing, growing, growing. The "Rose of the Dairy Industry" has in truth become a

gigantic bush, all the time threatening to overshadow the main trunk from which it projects.

THE importance of the work of The Association of Ice Cream Supplymen, especially through its great educational exhibitions, was clearly shown at Cleveland last month.

There is no doubt that the rank and file of the ice cream manufacturing industry is well pleased with what the supply association has done for them in the way of keeping them informed upon the commodities entering into ice cream production. It is to be regretted that the national association neglected to invite the supplymen to stage an exposition at their 1924 convention. For not taking this action at that time the association probably has good reasons not to be questioned by this observer, and it is possible that in its own time the invitation will be issued.

However, there is no definite understanding as to an exposition for next year. The association merely elected officers and chose New Orleans for its next meeting place. E. B. Geisel, head of the Anheuser-Busch plant, New Orleans, has offered the supplymen the use of his company's large warehouse in the Crescent City. This warehouse, we are told, affords even greater space than the Cleveland Public Hall. But there are other things to be decided before this invitation can be accepted.

The supplymen have different courses before them. If they are invited to exhibit at New Orleans, and there is every reason to believe this will be done, they can stage a third National Exposition. Also they may decide to choose a more centrally located city and present another exposition. Then again, they may revert to their former practice of staging regional conventions in different parts of the country. Supply officials at Cleveland could not make a definite announcement last month.

Developments in the matter will be watched with the greatest interest. There is no doubt that the ice cream manufacturing industry wants the exposition. There also is no doubt that they shall have it. The industry demands it.

VERNON F. HOVEY is the new president of the National Association of Ice Cream Manufacturers. His selection meets with the approval of all ice cream men who know of his long and earnest interest in the promotion of the industry through association work. Mr. Hovey, who does business at Schenectady, N. Y., for the past two years has served the association as New York state director.

With the affairs of the association in such hands, it is easy to expect good counseling and able management in the direction of affairs for the coming year.

It is no small task that Mr. Hovey undertakes. The National Association of Ice Cream Manufacturers has grown to be one of the great trade bodies in the country with membership extending from coast to coast and overflowing into Canada. Too, Mr. Hovey takes up the reins of office relinquished by a man of peculiar official

genius. Charles A. Morris for two years has made his organization a most able leader, ever alert in its interest, ever resourceful in emergencies, ever ready when needed.

Mr. Morris merits a debt of gratitude. His members are duly sensible of this fact. It is only in the consciousness that such an able successor has been chosen that deep regret is not felt.

* * *

IN a day and time when correct English is seldom found, except on printed pages—and sometimes not even there—it is interesting to record the fact that the retiring president of the national association is an old-fashioned gentleman who uses good grammar in his speech.

When our late president, Warren G. Harding, was early in office, English editors were strangely interested in his English, making more or less caustic comment upon our president's mode of expression. It was strange to hear a former editor criticised for splitting the infinitive, incorrectly employing verbs, etc. It is even stranger than hearing college professors make grammatical errors.

But when the ice cream industry numbers among its members a man who speaks purer English than most college professors, and whose manner is equally as courteous and pleasing, we can feel well satisfied with the type of men attracted to this industry.

The retiring president typically is an American, of that splendid race of "Down East" Yankees. But not even that delightful New England accent can cover up his careful pronunciation, his choice selection of words, his correct employment of verbs in the proper place.

* * *

SPEAKING of New England, the convention president had no reason to be disappointed over the way his home folks turned out at his invitation. They were at Cleveland 81 New England gentlemen representing 45 ice cream firms, in addition to 12 ladies.

IMPROVEMENTS FOR NORTHWESTERN PLANT

For new equipment, alterations and additions to its plant the Royal Ice Cream Company, Tacoma, Wash., is spending \$12,000. Nearly half this sum is being invested in glass-lined, steel storage tanks. Capacity for making ice cream and handling milk and cream are increased by 50 per cent.

New Record Set.

The company's ice cream production reached a new record during the warm season lately ended. During August, the output rose to 1,200 and 1,500 gallons daily, distributed to 300 retailers in Tacoma and nearby territory. When another summer comes a daily production up to 2,500 gallons will be possible. During hot weather the company delivers ice cream, chiefly by truck, as far as Easton, Morton and National.

More equipment and plant changes enable the Royal Company to handle 2,000 gallons of milk and cream in a housing space where 1,200 gallons were a former maximum. New equipment includes an improved cooler, which brings milk, after pasteurization, to a 4-degree temperature before it goes to the storage room.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

Lookin' on at the National Exposition

Little Visits to the Booths in the Cleveland Auditorium
With Lester S. Olsen

IN 50 per cent of the ice cream plants of the land wheels almost came to a standstill the week of October 22-27 while ice cream manufacturers of America were upon the magnificent adventure to ice cream wonderland.

To say that it was the industry's greatest exposition would be but to echo things already mentioned in this publication and already heard a thousand times before delegates packed their socks and collars for the journey to home and a quiet corner.

You already have heard that there were 200 exhibitors. It is not news to you that there was ninety thousand square feet of floor space. There is nothing new in the assertion that the exposition, both in point of space and in variety of products, was 40 per cent greater than last year's. You saw the swirling crowds, snaking and squirming their way down the long aisles to this exhibit and that, at every round of the corner meeting something of a startling nature.

Every corner of the exposition hall, both floors, held an adventure. Every extra visit to the hall disclosed something new that was overlooked the first time. One

week is indeed a short space of time in which to take and seriously study all the products on display.

The feature of the exposition was the growing interest of manufacturers in their trade exhibits, of course. Men who have followed the fortunes of the supply association since it first launched its exposition program, beginning with small, lightly attended regional expositions, especially, were struck by the large crowds in the hall, daytime and in the evening, and by the frank interest shown.

There were machines of every type and for every purpose in this industry. Containers and flavors were there in abundance. There were advertising devices, gas and electric delivery trucks, freezers, gelatine, iceless cabinets—the list is entirely too long to cover now.

* * *

Representatives of many foreign countries were there, and many orders were placed by European and South American firms for American ice cream equipment.

To a gentleman representing the Arctic Ice Cream Co., Detroit, goes the honor of being the only man in the hall to "sell" a foreign delegate in that delegate's own language. The buyer was Louis Greenens of Gand, Belgium, interested in cabinets. In the German tongue he asked the Arctic representative if he could speak German, and upon hearing an affirmative reply he proceeded to ask questions concerning the iceless cabinet, and was so satisfactorily answered that he bought. His equipment was on the way to Belgium by the time he left the convention.

* * *

Among exhibits attracting much interest in the public hall were the mechanically and electrically refrigerated ice cream cabinets. Firms displaying these cabinets included the Lipman Refrigeration Co., Beloit, Wis., and the Nizer Corporation, Detroit.

* * *

The Consolidated Cone Company had an exhibit ranking among those claiming the most interest. Through an oversight this firm's name was left out of the November issue of *The Ice Cream Review*.

* * *

C. K. Nelson, inventor of Eskimo pie, was one of the most interested visitors in the exposition hall, spending much of his time in the booth of the Eskimo Pie Corp.

* * *

We do not attempt at this time to mention all the firms exhibiting there, and those omitted now will be mentioned next month.

* * *

In the booth of the Menasha Woodenware Co., Menasha, Wis., were the following representatives: G. D. Holman, Menasha, Wis.; Elmer Mack, Cleveland, O.; Francis R. Gallagher, Indianapolis, Ind.; E. E. Engel, Flint, Mich.; W. O. Welch, Cleveland, O.; O. B. Cartwright, Atlanta, Ga.; J. W. Chase, Columbus, O.; W. E. Smith, Cleveland, O.; O. J. Johnson, Syracuse, N. Y.; W. E. Larkin, New York City.

Notes on National Dairy Exposition

A Record of Little Visits in the Booths of Dairy Supplymen
at Syracuse Last Month

For the first time in the history of the National Dairy Show the originators of soluble cocoa have been represented. Van Houten, Inc., are the originators of soluble cocoa powder, according to Geo. E. Stevenson, who was in charge of the Van Houten booth at the dairy show. This feat was accomplished in 1828, by C. J. Van Houten. Van Houten's cocoa has been made in Holland ever since that time, as they have been unable to obtain proper milling in this country. It is manufactured in the city of Weesp, Holland. Mr. Stevenson, who was in charge of the exhibit, is in charge of all bulk business for companies specializing in ice cream and dairy cocoas and chocolate syrups.

* * *

Emery Thompson brine freezers also were well represented by M. E. Cutler, general manager of the firm; Andrew Thompson, J. H. Mahler and G. E. Fuller. They had on display 40, 80 and 120-quart freezers, featuring the new extra large inlet valve with new type of batch control. Mr. Cutler has done a great deal of engineering and research work and to him a great deal of credit is due for the great improvements that have been made recently in the Emery Thompson freezers.

* * *

At the dairy show this year H. H. Miller Industries Company had considerable new equipment on display. They have added the Skidd line of equipment which, in addition to Mr. Miller's own line, made a very favorable showing. One of

VIKING—The Practical Pump

For pump users who demand dependability and economy of operation.

The VIKING is self-priming and delivers a steady stream under varying heads. This eliminates all splashing and pounding.

Only two moving parts—no valves, springs or other trouble-makers.

Get the Viking catalogue. It's yours for the asking.

VIKING PUMP CO., Cedar Falls, Iowa

VIKING PUMPS

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

the features was the Miller-Kwick 4-roll churn. Other pieces of equipment on exhibit were the 250-16,000 pound per hour cooler, vats, ice cream freezers, centrifugal milk pumps, 1 inch to 2 1/2 inch size bottle fillers, etc. A new 10,000 pound pre-heater is another new addition to the Miller line. H. H. Miller, M. E. Miller, L. S. Allen and W. H. Thompson, Chas. Skidd and Edward Thompson were in attendance.

* * *

Keinner-Williams Stamping Company of Richmond, N. Y., were showing milk coolers, ice cream cans, gauge pumps, hand serving pails, etc. H. A. Keiner, H. E. Keiner, W. W. McEwen, D. H. Gundrum, J. C. Smith, J. Smyth and C. B. Richter were in charge of the booth.

* * *

The Commercial Truck Company, Philadelphia, exhibited a new milk truck, embodying many new exclusive features and a motor wheel unit. The truck attracted much attention and universally favorable comments were passed upon the ingenious design which permitted remarkable ease of operation from the side of the truck, thus obtaining unprecedented speed in delivery on the route. E. J. Hancock and C. W. Peck were at the show all week, in charge of the exhibit, and R. K. Merrick, sales manager, was present three days.

* * *

The National Homogenizer Corporation exhibited for the first time the new national homogenizer, incorporating new Schroeder patents. The machine exhibited was 100 gallon capacity, finished in nickel and white enamel. Its main feature, aside from the particularly sturdy construction, was the elimination of eccentrics and the revolving stepped homogenizing head for which the manufacturer claims three distinct phases of efficiency. A very large amount of interest was displayed by the trade generally and a large attendance of prospects was recorded.

The exhibit was in charge of F. D. Courtenay, general manager, with the following assistants: P. M. Travis, C. H. Sicard, H. H. Scott, S. B. Macafee and O. H. Bean. W. L. Scarritt, chief engineer of the company, was also in attendance.

* * *

The John W. Ladd Company had on display at the national dairy show in Syracuse the new Blue Line bottled can washer, Models Standard "24" and Junior "24". The Rogers Junior and Standard brick makers were shown with the new automatic valve. Several sizes of viscolizers were on display in the Ladd booth.

At the ice cream show in Cleveland the Ladd organization again displayed the viscolizers and Rogers brick makers.

* * *

The Everhot Manufacturing Company of Maywood, Ill. experienced their biggest week, according to J. H. Payton who was in charge of their exhibit in the State institution building. Mr. Payton had little time to explain the use of the "Everhot Branding Iron" for a great deal of his time was occupied in taking orders for the machine. It fills a long felt want in the dairy and ice cream business, for it provides a method for permanently marking milk crates, ice cream tubs, cabinets and provides a prominent numbering system, he says.

* * *

In booths Nos. 63 and 64, building No. 3, we found E. Heile, representing the Walker Vehicle Co., Chicago, exhibiting the "Walker Special Model '22'", one ton milk delivery chassis. There was a comprehensive display of photographs of Walker electric trucks, in the service of national prominent users and a full sized model of a standard Walker rear axle, showing the well-known Walker balance drive in actual operation.

(Continued from page 132)

B. B. Scott is one of the most loyal exhibitors behind the exposition. This Yankee gentleman's product, Scott's coffee extract, is to be seen wherever The Association of Ice Cream Supplymen decides to visit. His booth attracted many visitors at Cleveland.

The Kemper-Thomas Company of Cincinnati, Ohio, manufacturers of The Barker Patent Waterproof outdoor signs; the Everbright "Nicolene" indoor signs, and cloth caps and novelties, exhibited their products. The company is now supplying some of the largest ice cream manufacturing companies in the United States, officials say.

C. H. Kratz, C. H. Weier of Cincinnati and George Arnold of Cleveland, represented the company.

Cedar wood ice cream packing tubs and cedar wood ice cream packing pails are manufactured by the Richmond Cedar Works of Richmond, Virginia, who were represented at the national convention, in Cleveland, by John S. Parrish, J. Sheperd Parrish, H. Carlton Parrish, Kirk Parrish, Marshall Miller and George A. Mortland.

The Cone Company of America, Long Island City, N. Y., and Chicago, Ill., was represented at the convention by Vice-President J. R. Wells, H. H. Northrup, New York; H. Lapat, manager of the Chicago office, and O. W. Johnson of Chicago.

The company manufactures absolutely guaranteed pure cake ice cream cones, it is claimed.

The Texas Barrel Company, Houston, Texas, exhibited their patent bottom ice cream tubs with three year guarantee. This company manufactures cabinets and tubs of all sizes.

Jacob Noodleman of Houston, Texas, and Miss Kaplan of Cleveland, Ohio, had charge of this booth.

The White Company, Cleveland, Ohio, exhibited illuminated photograph display showing various types of refrigerator bodies and milk tanks mounted on all models of the White chassis. Daily parties were formed and conducted through the White factory.

The company was represented by F. E. Triebner, F. Hayden and E. Bowers, all of Cleveland, Ohio, and all managers of national sales; also by C. O. Sellman, Pittsburgh, Pa.; C. Lamson, New Haven, Conn.; A. Gardner, Baltimore, Md.; O. M. Crotty, Pat. O'Connor and W. Humbert, all of Cleveland, Ohio.

Ice cream cutting machines were exhibited by the New Era Company of Oshkosh, Wisconsin. Persons representing the company were C. A. Carver, P. C. Carver and H. L. Carver.

The John J. Grothe Company, Inc., Woburn, Mass., manufacturers of Zero trucks, was represented by J. N. Gurdy, president; A. B. Mackay, vice-president and general manager; Joseph Robbins, Charles A. Cronin, James A. Smith, James N. Keefe and Alfred Gurdy, all of Woburn, Mass. The Cleveland branch was represented by M. T. Gardner and Mrs. M. T. Gardner. Frank L. Ruzicka represented the St. Louis branch and John Mitchell, Jr., the Canadian branch.

New style two-colored ice cream tub covers were exhibited by the Canvas Products Corporation, Fond du Lac, Wis. P. C. Goodrick, secretary, represented the company.

Among the new advertising features of the convention was The Ice Cream Kid manufactured by Harry H. Heming, Milwaukee, Wisconsin. "The Kid" is a regular American boy who sat licking an ice cream cone in true boy fashion, and his changing expressions as he would rub his stomach, nod and wink at those about him, attested that he believed ice cream a food which should be used in liberal quantities. "The Kid" was accompanied by C. B. McKeown of Wilkingsburg, Pennsylvania.

The exhibition of the Cleveland Fruit Juice Co. of Cleveland, Ohio, was in charge of C. H. Duncan, A. A. Campbell, H. G. Hunson, R. W. Varnum, H. C. Brown, H. H. Driggs, W. H. Snider, A. W. Carvel, H. P. Merritt, Arne Vick, B. L. Welsh, W. B. Bagnell, C. N. Beecher, G. Birkholz, F. C. Herrick, S. C. Haviland, H. G. Harris, W. E. Strickland, O. W. Swift, G. W. Thornton, C. E. Ward, W. S. Welsh.

Frank A. Haines, J. Will Carpenter, Harry Cohn, G. Pelkington and Ira S. Brightman are distributors of Medale Milk Powder, Good-Morning Branch Crushed Fruit, Good-Morning Gelatine Adwater, anti-germ salts, deodorants, disinfectants, etc.

Kleen Products Company, Inc., North Wales, Pa., exhibited their products, among which were spoons for Seal and Dixie Containers. Henry L. Hartman, secretary-treasurer, and Richard Whittall, district sales manager, were in charge of the booth.

The Palm Fechteler & Company of New York City, displayed many artistic decalcomania window signs for ice cream manufacturers for use on dealer's windows. The firm of Palm Fechteler & Company is a pioneer in the decalcomania field, and all lettering on U. S. mail wagons and American Express Company wagons are their products, they claim.

Jas. A. Ferguson, sales manager, 67 Fifth Avenue, New York City, and W. H. Chubb, with headquarters in Cleveland, Ohio, represented the company.

Ryan E. Timberman, Inc., Wilkes Barre, Pa., featured complete newspaper advertising campaigns for the ice cream trade and dairy interests. Beautiful four color window streams featuring the "taste appeal" with natural color fruit were also displayed in their booth.

L. A. Babcock of Cattaraugus, New York, and J. E. Ca, of Erie, Pa., distributors, displayed some of their products in their booth at the convention. Among them were ice cream batch mixers, triangular packing cans for package ice cream, United States freezers, ice pails, etc.

The Cincinnati Extract Works of Cincinnati, Ohio, displayed cold packed fruits, glace fruits, whole and broken maraschino cherries, extracts and colors. Customers from Maine to California visited their booth, some of them having been customers of theirs for the past twenty years, they claim.

Emil I. Mayer, organizer of the company in 1902, was in charge of the display daily. With him was A. J. Lewis of Cleveland, Ohio, and C. P. Guinivan of Buffalo, New York.

The Individual Drinking Cup Co., Easton, Pa., was represented by C. F. Dawson, J. V. Cuskey and M. E. Morris.

Souvenir desk reminder and perpetual calendar was given to every ice cream maker by the Fouts & Jenks Company, Jackson, Michigan, exhibitors of flavors and flavor concentrates for ice cream.

R. A. Austin, C. R. Foster and C. H. Redding, vice-president and sales manager, represented the company.

The Foxboro Company, Inc., Foxboro, Mass., displayed a temperature controller in operation. The company was represented by A. E. Bates and L. D. Brainard, 508 Leavelle Building, Cleveland, Ohio.

The alert representatives of the Star Extract Company, New York City, attracted much attention to their display of Scotch Bob, "the new butterscotch ice cream." Vanilla, chocolate intensifier, custards, and other flavors were pleasingly displayed. The representatives of the company were Carl Katzenstein, John T. Shanahan, J. Harry Bender, E. Weden and Edwin Hexter.

Waldman Bros., 9 No. Moore St., New York City, exhibited imported novelties, noise makers, and skull caps for carnivals and trade excursions. This company is the maker of the famous shooting gliders.

The Liquid Carbonic Co., Chicago, Illinois, manufacturers of ice cream supplies, was represented by C. J. Palmer, sales manager; Dr. George Lloyd, chief chemist; W. W. MacGowan, R. J. Reinhart, Wm. MacMillan, C. B. Palmer, W. B. Sutcliffe, land, E. A. Patten, F. W. Bettes and E. D. Coppe.

Lucious fruits for use in the manufacture of delicious ice cream was displayed by the Schuster Company, 4th and Huron Rd., Cleveland, Ohio. Representatives of the company were R. H. Clower, Norfolk, Va.; A. E. Stettin, Cleveland, Ohio; C. E. Schuster, Cleveland, Ohio; E. W. Lett, Erie, Pa.; John Noble, Cincinnati, Ohio; R. G. L.

Glass lined vertical coil batch mixer and pasteurizer,
Universal homogenizers, belt and motor driven pumps were
exhibited by the Jensen Creamery Machinery Co., Oakland,
Calif., and Bloomfield, N. J.

Representatives attending the convention were F. G.
Connel, Jr., treasurer and general manager; W. D. McCand-
less, F. A. Lowery, J. E. Addison, Wm. Britton and L. C.
Ott, special homogenizer representative.

* * *

The Crown Fruit & Extract Co., Inc., New York City, was
represented at the exposition by P. N. Miller, Jr., N. S. Bis-
sell, Max Reese and C. W. Russ.

* * *

That edible gelatine enhances the food value of ice
cream to a remarkable extent was shown by the experimental
data on display by the Edible Gelatine Manufacturers of
America. A full report of the investigation of the food value
of gelatine conducted at Mellon Institute of Industrial Re-
search, Pittsburgh, as well as results of co-operative work
with Pittsburgh hospitals were given through complete
growth curves of experimental animals. Curves showing
the recovery of sickly infant when one per cent of gelatine
was added to their milk foods were especially striking. A
chart of "Uses of Edible Gelatine" showed the extensive em-
ployment of gelatine in many food industries.

Dr. Thomas B. Downey of Mellon Institute was in charge
of the exhibition at the convention, thus offering an oppor-
tunity to obtain reliable information regarding edible gela-
tine.

Company members of the Edible Gelatine Manufacturers
of America are: Crystal Gelatine Co., Essex Gelatine Co.,
Kind & Knox Gelatine Co., Milligan & Higgins Gelatine Co.,

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Swift & Co., United Chemical & Organic Products Co., United States Gelatine Co., and J. O. Whitten Co.

Milligan & Higgins Co., 222 Front Street, New York City, manufacturers of edible gelatine, had an interesting exhibit at the convention. The company was represented by Frank L. Carroll, 19 So. La Salle St., Chicago; Chas. Blake, A. W. Johnson and H. T. Hall of 222 Front St., New York City.

The Gaulin homogenizer exhibited at the convention, manufactured by the Manton Gaulin Mfg. Co., Inc., 11 Elkins St., Boston, is efficient, sturdy and durable, according to J. M. Colony, representative of the company. Mr. Colony claims that Gaulins have no equal in length of service; many of the original installations are still in daily use.

The representatives of the Consolidated Wafer Co., Chicago, claim they received innumerable compliments on the beauty and excellent eating qualities of Cremo cake cones, together with their high class packing and shipping containers. The Consolidated Wafer Company is one of the largest cone manufacturing companies in the world.

Representatives of the company attending the convention were R. G. Hansen, John W. Erb, E. L. Maier, Harry Schwartz and Max Goldberg, vice-president.

Sealright Co., Inc., Fulton, New York, exhibited Sealright packages in various sizes. Dr. Wilbur L. Wright, president, was in charge of the company's booth. Other attendants were: E. W. Skinner, vice-president and general manager, John L. Dolphin, Wm. S. Lee, Sam A. Landau, E. R. Johnson, Geo. Geddis and Harold Howe.

Dry Zero Insulation Co., Chicago, exhibited three Dry Zero cabinets, showing two in operation. They also advertised Dry Zero iceless shipping containers and Dry Zero insulation. Representatives from all over the country attended the convention, among them: J. H. Hunt, W. J. Hunt, A. P. Hawkins, M. M. Rosenberg, Jas. D. Baker, Geo. W. Wood, D. F. Belden, Harold Hitchcock and Alex. Davis.

Paterson Parchment Co., Passaic, N. J., was represented by Geo. C. Mayer, A. T. Pratt, Jos. X. Gubbins, John Andrews, M. R. Repine, H. C. Mather, J. A. Newman and A. H. Verrinder.

C. Mortensen represented the Standard Milk Machinery Company of Louisville, Ky. He is president of the Dixie Flyers and popular in the South.

The Central Ohio Supply Company exhibited products manufactured by the Stout Mfg. Co. of Milwaukee. Gelatines and washing powders were also displayed. Attendants in this booth were V. V. Nelson, E. H. Bayar, Carl Zimmerman, D. E. Davidson, E. H. Paine and F. M. Clark.

The Commercial Truck Co., Philadelphia, exhibited a cut-away motor wheel unit showing the direct unit drive embodied in all Commercial trucks. A three and one-half ton truck which had been in use for five seasons created much interest, as the condition of the truck would not indicate that it had seen very much service.

The exhibit was in charge of Messrs. Hancock and Peck, factory representatives.

John Wood Mfg. Co., Conshohocken, Pa., exhibited electric weld ice cream cans. A. T. Sponar, Frank Sutcliffe, president, J. L. Jenners, Wm. Taylor and R. W. Simpson represented the company.

David Michael & Co., Philadelphia, displayed Mexican vanilla powder, a product that has made vanilla the favorite ice cream of the multitude, is claimed by the representatives of the company: David Michael, Howard Silcox, Walter Roskam, Eli Rosenbaum, R. Van Dusen and Robert Rosenbaum.

Chas. A. Beall, J. W. Mulligan and H. J. Tomb represented the Rex Extract Co. of Brooklyn, N. Y.

Elyria Enameled Products Co., Elyria, O., gave an interesting display of their glass lined equipment. P. J. Cochran was in charge of the exhibit with the following attend-

ants: D. B. Etters, J. E. Simpson, F. B. Morris, M. B. nington, T. F. Braman, D. W. Greene, J. T. Emmon and S. Calvert, president.

A. J. Miller and O. C. Miller represented the Sani Tinning Co. of Cleveland, O. The company specializes retinning rusted and worn ice cream cans.

Swift & Co., Chicago gelatine manufacturers, were represented by F. W. Mehlihop, manager, M. Strenetz, Kemp and F. Rose.

The Lipman Company, Beloit, Wis., for many years manufacturers of full automatic refrigerating machines for fountains, have now developed a combination cabinet especially for the ice cream trade. The cabinet is insulated pure cork board and designed particularly for use with Lipman full automatic refrigerating machine in such manner that the cabinet and machine are a single unit. This machine was displayed at the convention in Cleveland by R. Morash, J. L. Shrode and C. E. L. Lipman.

The W. C. Ritchie & Co., 831 W. Van Buren St., Chicago, exhibited Napacans and Napaspirals, containers for products. F. F. Harrison and G. W. Drummond represented the company.

The Pfaudler Company, Rochester, N. Y., gave an exhibit of its products which proved interesting to every ice cream manufacturer. The representatives of the company attending the convention are as follows: W. D. Phetepiece, president; R. B. Kilmer, general sales manager; J. E. Collier, assistant general sales manager; E. D. Bennett, sales manager Chicago branch; H. S. Tvedt, eastern representative; G. E. Gray, central states representative; G. M. Scott, western representative; J. G. Moore, southern representative; W. H. Klee, eastern representative; and J. C. Douglas, eastern representative.

Keiner Williams Stamping Company, 8747-73 123d Richmond Hill, N. Y., exhibited its ice cream and milk cans. Representatives were H. A. Keiner, H. C. Keiner, D. H. Keiner, drum and W. W. McEwen.

A pretty fountain with pure vanilla as a spray was an attraction at the booth of the Corizzo Extract Company, West 20th St., New York City. Representatives were Oscar Nunes, C. H. Parsons and K. S. Nauert.

Gowing-Dietrich Co., Inc., Syracuse, Buffalo and New York City, exclusive distributors of the Manton-Gaulin homogenizers in New York after January 1, 1924, exhibited a 400 gallon belt driven homogenizer at their booth at the national convention in Cleveland. The company was represented by D. H. Dowing, Jr., E. K. Barine and L. S. Wheeler.

Cork Importing Corporation, Buffalo, N. Y., exhibited insulating material which has been on the market for the thirty years. J. H. Stone, who has been identified with the industry since its beginning is now general sales manager of the above corporation. Non-Plus-Ultra Novoid corkboard (100 per cent pure compressed) is a fine grained material particularly adopted to the manufacture of ice cream machines and truck bodies, according to officials. The American consumption of corkboard produced by this company is approximately 150,000,000 board feet per annum.

The Weibatch Liquid Scale Co., Inc., of Grand Rapids, Mich., exhibited two liquid weighing machines. Vice-president A. E. Clarke and Salesmanager R. A. Chappell emphasized the advantage of weighing the batch instead of measuring it. To back their statements, copies of testimonials were distributed, written by users of their product. Practically all cases the letters state that the machines are for themselves in from four to six weeks' time, and used the machines have increased their business.

The Ohio Galvanizing & Mfg. Co., Niles, O., was represented by A. P. Daugherty, W. R. Robinson and B. L. Lor at the national ice cream convention. The above company manufactures ice cans, can baskets, distributing trays and packing cans, under the commercial name "Ohio Special."

J. W. Hussey, W. M. Gribbin and L. D. Ault, Jr., represented the Davis Cooperage Co., Martinsville, Ind. The

pany manufactures ice cream tubs, pails, cabinets and cabinets for mechanical refrigeration.

On the main floor of the Cleveland exhibit the Daigger Corporation, 54 W. Kinzie St., Chicago, exhibited Washburn's improver, Washburn's vanilla concentrate, Washburn's chocolate concentrate, and survivors.

* * *

A complete line of advertising signs for the ice cream industry was displayed by the Beacon Mfg. & Sales Co., Inc., Freeport, New York. Charles H. Lush and George Darenberg represented the company.

* * *

James F. Drew, 382 Pearl St., New York City, exhibited imported egg yolk in original packages, as well as imported gelatines and vanilla beans. Mr. Drew is a veteran exhibitor. He is widely known and loved in the industry.

* * *

The National Homogenizer Corporation, Utica, N. Y., exhibited the homogenizer with the rotating head which is built at Frankfort, N. Y., under the Schroeder patent rotating head. Four distinct homogenizations of the product take place while passing through this machine. The original type of Schroeder homogenizer has been in active use in Europe for many years and hundreds of them are in successful operation abroad, they say. Representatives who attended the exposition were W. T. Scarrett, M. E., engineer in charge of production, Frankfort; F. D. Courtenay, general manager, Utica; and P. M. Travis, B. Sc., chemist in charge of development work, 47 West 34th St., New York City.

* * *

The Ella brand flavors were displayed by the Citrus Products Co., 54 East Kinzie St., Chicago, Ill. Representatives attending the convention were President Eric Scudder, Treasurer P. S. Mann, C. H. Athelpohl, manager of the ice cream department, and J. W. Sheridan, salesman.

* * *

A display of many dairy and ice cream plants located in different parts of the country was featured at the dairy show by The McCormick Co., Pittsburgh. The variety of the plants and the appearance of them met with considerable favor among visitors, we were told. The exhibitor was in charge of Eilliam D. McCormick and his assistant, J. K. Anderson.

NOTES ON NATIONAL DAIRY EXPOSITION.

(Continued from page 134)

Wyandotte was there as usual, occupying a big space with a big crowd of folks around it all the time. Those attending from the J. B. Ford Company were J. J. Hart, C. B. Robinson, Thos. Blair, D. B. Dozier, V. R. Jones, Wyandotte, Mich., F. H. McCawley of New York City, J. Lapointe of Albany, C. B. Learo and F. E. Vakes of Syracuse, John W. McDonald of Oswego, J. D. Gibby of Rochester, H. H. McCallahan, manager of the Buffalo office, A. Tetreault of Montreal, Canada, C. I. Fairbanks of Boston, C. Van Gilder of Allentown, Pa., Wm. Dodshall, Jr., Scranton, Pa., and J. Rhuby of Detroit, Mich.

* * *

Our neighbor on the left, the Armstrong Cork Company had on exhibit their Armstrong "Circle A" cork brick, pareil corkboard brine covering, steam pipe covering, pressure block, insulating brick, linoleum floor covering for office use and it was evident that the visitors to the dairy show were deeply interested in the Armstrong products. This company was represented by R. H. Evans of Pittsburgh, H. B. Gates from the Pittsburgh office, Hugh J. Krampe, Rochester, Mr. Shive of Rochester, Mr. Pendleton of Schenectady. Mr. Krampe was obliged to leave for his home after the first few days of the show, having suffered an attack of tonsillitis.

* * *

The Sealright Company, as has been their usual custom, has brought another piece of equipment for the dairy and ice cream industry. This year the main feature of the exhibit was a little machine that is used for slicing the Sealright container into equal portions. This machine slices a quart container into eight pieces, revolving the cylindrical carton and cutting the paper evenly all around. All a retaining the housewife has to do then is to slice the cream with an ordinary table knife and the cream comes out of the ring in first class condition. Sealright also had on exhibit for the first time paper milk bottles and had a working demonstration of the filling and capping machine, filling and capping the paper bottles. They are said to work very satisfactory in the filling and capping machines that are now on the market.

The Sealright Company had a fleet of cars at the exposition ready to take delegates to their factory at Fulton, 24 miles away, to show how the Sealright caps and paper containers are made. Dr. Wright told us that some of the milk dealers went there and actually saw the caps that they had ordered, made and printed. Among other things, they exhibited at the Sealright booth were the one-gallon cans and packing trays; two and one-half gallon ice cream cans for bulk use; Sealright ice cream slicing machines; one-quarter pint individual containers; Sealright filling machines; Sealright bottle caps and the paper milk bottles. Those in attendance were John Dophin, San Landau, W. Lee, R. R. White, J. Good Conley, E. R. Johnson, R. D. Edwards, George Geddis and Geo. Vogt. Dr. Wilbur Wright, president of the company, and E. W. Skinner, vice president, were in charge.

* * *

The exhibit of The Foxboro Co., Inc., consisted of indicating and recording gauges and thermometers particularly suitable for the dairy industry. Of particular interest was the Foxboro temperature recorder-controller, which was in actual operation. This instrument will not only control the temperature of such operations as pasteurizing and holding, but will also furnish a record of the temperatures maintained.

The following men were in attendance: F. G. Hart, The Foxboro Co., Inc., 49 Federal St., Boston, 9, Mass.; C. Schwarz, The Foxboro Co., Inc., 921 Granite Bldg., Rochester, N. Y.; H. E. Bundy, The Foxboro Co., Inc., Box 2, Albany, N. Y.; P. S. Bolton, The Foxboro Co., Inc., 50 Church St., New York City.

* * *

From far away California came samples of powdered milk, casein, milk sugar, milk fat and other dairy products of which we hear little about, made by the Golden State Sales Corporation, formerly the California Central Creameries.

C. E. Gray, B. H. Rawl, F. E. Buck and O. Wyman of California represented the company at the dairy show. They were present also A. E. Paulsen, F. J. Widenhorn and C. Burckhalter of New York and C. E. Buell from Boston.

* * *

The Menasha Printing & Carton Company of Menasha, Wis., had a beautiful booth decorated with Menasha cartons and supplies that have been prepared for ice cream and creamery companies in practically every state of the Union. Gray D. Holdom, sales manager of the company, was in

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

of the booth and was assisted by Elmer Mack of the
and office, W. L. Milberry and W. E. Larkin of the
New York City, New England, Philadelphia and Washington
and O. J. Wilson from New York state, Pennsyl-
and Virginia territory.

* * *

L. Baylor of the James Leffel & Company of Spring-
field, O., had a hard time of it trying to explain to the boys
he didn't put the boiler that he had on exhibit to work
up the building during the first cold days of the
Mr. Baylor had on exhibit a small Leffel Scotch
boiler, one that has been used in a great many small
Mr. Baylor's boiler is also made in larger sizes and
by many of the large ice cream and milk companies
butter manufacturers of the country. The James Leffel
Company was also represented by J. Ross Lebold.

* * *

The Mojonnier Bros. Co., had the usual interesting ex-
hibit at the show. In charge was Timothy Mojonnier and
Moon of Chicago, Paul C. Mojonnier of St. Louis,
Hixon, formerly of San Francisco office and now of
New York City, and J. A. Cross of Columbus, Ohio, Herbert
was also in attendance.

The equipment on exhibit was the Mojonnier culture
tiller for continual propagation and control of pure
cultures for butter, buttermilk and cheese.—Mojon-
nier immersed butter print scale; Mojonnier rubber
poured composite sample bottle; chemical and bacteri-
al supplies for the dairy laboratory, Mojonnier vacuum
drying equipment; Mojonnier ice cream packing ma-
chine Mojonnier milk tester for fats and solids—Mojonnier
ice cream overrun tester; Mojonnier vacuum pan; Big book—
"Chemical Control of Dairy Products" by Mojonnier and

The feature of the Mojonnier exhibit was the new model
ice cream packing machine, with a capacity of fifteen bricks
package sundaes per minute. This machine operates
the same principal as the larger machine and requires
one man to operate it instead of two. The larger ma-
chine has a capacity of 1800 bricks or 3600 package sundaes
per hour.

* * *

Svenir hunters used to stop at The Olsen Publishing
Company's booth, which was at the entrance of the Manufac-
ture Exposition Building leading from Building No. 3,
ask for the name of the donor of the thermometers.
were wondering for a number of days what they were
about until we learned that they were being put out
by C. Doering & Company of Chicago. Mr. Doering was
in as a souvenir, a little thermometer registering with
greater accuracy the physical and mental condition of
each person. C. Doering & Son had on exhibit their cottage
cheese machine and their new and improved butter print
machine in use by a great many plants in America. A list
of users of the Doering butter print machine would in-
clude many of the most prominent concerns in the dairy
industry.

Mr. Doering also had on display the Hoffman no-glare
motor automobiles, of which he is patentee. This light
shined under the fender and throws the rays forward on
the road instead of upward into the eyes of oncoming drivers.

* * *

Those who did not call at the booth of Oakes & Burger
of Cattaraugus, N. Y., and get their souvenir, consisting
of an excellent leather cigarette case and some good up-to-
date information on modern dairy plant equipment, have
missed something that is really worth while. Oakes &
Burger Co. are very well known in the East, having been
in business for more than 50 years. They handle a complete
line of equipment for milk plants, creameries, ice cream fac-
tories, cheese factories, condensaries, milk and casein plants
and are themselves engaged in the manufacture of a great
part of this equipment. They are representing the Bosse-
lor Corporation of Harrison, N. J., manufacturers of re-
frigerating equipment. Those in attendance at the Oakes &
Burger exhibit were the following: L. A. Babcock, presi-
dent; I. C. Oakes, secretary; Alexander Burger, treasurer;
E. Sweetland, John Case, Wm. Bean, Eber L. Russell,
sales force; C. E. Briggs, shop superintendent;
J. Cunningham, Chas. Carlson and John Armstrong, shop
men.

* * *

Over in one corner of the A. H. Barber-Goodhue Co., we
saw a little crowd of men and the nosy reporter had to
elaborate to see what it was all about. We found in the
middle of the group, one of the late electrolytic cells, manu-
factured by the Electro Chemical Co. of Dayton, O., going

full blast. This is a very simple piece of equipment which
cuts the cost of sterilizing solution 95 per cent.

The Electro Chemical Co.'s outfit is very simple, sani-
tary and easily installed, and ice cream makers, milk deal-
ers and creamerymen expressed their entire approval of it.

* * *

The Anheuser-Busch, Inc., of St. Louis, exhibited the
47th A. B. C. refrigerator body sold to Burdan Brothers of
Pottstown, Pa. This was a two-ton size mounted on a 2½-
ton machine chassis. The exhibit was in charge of O. E.
Shaw and A. M. Minnick.

Trade Literature

The Canadian Dairy and Ice Cream Journal made its
initial appearance the latter part of September. It is pub-
lished at Toronto, Canada. An editorial outline of policy on
the front cover of Volume 1, Number 1, says it will be the
mission of this publication to serve the dairy plants in all
parts of Canada. The first issue contains thirty-four pages
and cover.

* * *

A book recently to reach the editorial department of The
Ice Cream Review is entitled "Ices and Soda Fountain
Drinks." P. Mitchell is the author and it is published
by McLaren & Sons, Ltd., 30, Shoe Lane, London, E. C. It
was sent to The Ice Cream Review with the compliments of
A. Pompa, editor of The Ice Cream and Soda Fountain Jour-
nal, London.

The book deals successively with "Ices and Sundaes,"
Section 1; "Wholesale Ice Cream," Section 2; "Bacteria and
History," Section 3; "The Soda Fountain," Section 4, and
"Phosphates, Bitters and Egg Drinks, etc.," Section 5.

A number of formulas are given in Section 1, most of
them along the sundae idea made popular in America. Brick
ice cream also is described.

Under the caption "Wholesale Ice Cream," the author
discussed methods of manufacturing the product in America.
In covering the history of ice cream, the writer the first men-
tion of the product in Great Britain is in connection with
Charles I, who gave his Italian chef, Demirre, a pension of
20 pounds per annum to keep to himself the secret of the
"frozen eggs" he made for the royal table. This was about
1640, it seems. He then sketches the progress of the indus-
try in Britain from the time that Agestine Gatti opened the
first ice cream parlor, until the present, showing how the
greatest obstacle to the development of the industry in Eng-
land is, the prejudice against ice cream caused by disrepu-
table vendors handling the product. He discusses the history
of the industry in America.

* * *

A new booklet on the Anderson Eskimo pie machine re-
cently was released from the press by the Anderson Bros.
Manufacturing Co., Rockford, Ill. It describes in a very in-
teresting and informative way the uses of this machine.
Officials say their literature is meeting with much favor
among manufacturers. Many inquiries are being received
regarding the Eskimo pie machine, we are told.

BACK TO ALABAMA

This one was told before a group of delegates at the
Cleveland exposition by Charles E. Landreth, president
of the North Carolina association:

"A negro in the trenches in France," said Mr. Land-
reth, in his rich Southern drawl, "heard a shell scream
overhead. He turned to a companion and said, 'Nigger,
didjer know shells eud tawlk?' 'How eum, nigger?'
asked the companion. 'Cauz dat un what jes' passed
wuz sayin', 'I'se goin' ba-a-a-ck ter Ala-a-a-BAM!'"

NEW 60-QUART FREEZER SAID TO FILL A BIG NEED.

There has been a strong demand from ice cream makers for a freezer that would have a capacity greater than the standard 40 quart freezer and less than that of the giant 100 quart freezer. To take care of this demand, therefore, The Creamery Package Mfg. Company is building a 60 quart Ft. Atkinson Horizontal Brine Freezer.

In spite of its increased capacity the new freezer occupies practically the same floor space as the 40 quart size.

And it has all the features which made the 40 quart and 100 quart Ft. Atkinson Freezers so popular.

The dasher and scraper blades are made entirely of bronze and are heavily tinned. Owing to their design, the mix is thoroughly agitated and beaten, resulting in a product of well controlled swell and one that possesses unusual velvetiness and body. The brine coil is constructed of one piece seam-

less copper rolled in form of helicoid coil, fitting absolutely tight and will withstand great pressure. Heavy insulation prevents the loss of temperature.

The outside cylinder jacket is heavy nickel plated copper and the inner cylinder is seamless nickel silver tubing. Heavy spiral gears running in oil are provided. All bearings are interchangeable and are made of genuine government bronze.

The base may be furnished in white vitrified porcelain enamel or aluminum bronze as desired. They may be equipped with either tight or loose pulley drive or direct silent chain motor drive.

NEW STOCK ISSUE FOR CALIFORNIA COMPANY.

A stock issue of 40,000 shares of preferred and 60,000 shares of common has been decided upon by the directors of the California Crushed Fruit Company to meet the demand for increased capitalization imposed by the tremendous volume of business which has poured in within the last year. This issue will be disposed of at \$10.00 a share of preferred with a bonus of one share of common stock for every two of preferred. This new issue is being absorbed largely by the citrus growers of California who are eager to invest in the company which they regard as one of the strongest assets of the citrus fruit industry. The record for speedy and widespread distribution of fruit juices made by the company has aided the growers materially in marketing their product. The fame of the California Crushed Fruit Company is not limited to the United States and Canada. During the past year, the fruit juices have been sent to distant parts of the world. The business of the company is constantly being increased by orders that pour in to the makers of Suncrush Orange and Suncrush Lemon from the Orient, Bolivia, Java, Holland, Italy, the Dutch East Indies and various other countries which have made a favorite of the Suncrush products. The California Crushed Fruit Company can boast of having aroused interest in its increased capitalization in every section of the world. The value of sharing in the new stock issue is realized by those who are being called on every day for the Suncrush Orange and Suncrush Lemon. This is evidenced by the attention that is being given to the issue by the retail trade—the

dispensers of Suncrush products. The popular fruit juices are well known throughout the trade and the opportunities afforded investors in the company are widely recognized. Editor The Ice Cream Review:

EDITOR THE ICE CREAM REVIEW TAKES ISSUE WITH DR. TOLMAN ON GELATINE.

I have just read Dr. Tolman's article, "Development of Edible Gelatine," which appears in the extra issue of The Ice Cream Review, (dated October 15, 1923,) and since I presume you aim to take every precaution to avoid printing any statement which is likely to mislead your readers, I call your attention to the following paragraph in Dr. Tolman's article (page 140), which I certainly consider misleading and extremely unfair to the importers of pure food gelatine:

"In conclusion I want to say that the work done by the Department of Agriculture in this investigation of the manufacture of edible gelatine, was undoubtedly of the greatest value to the industry, and the establishment of standards of metallic contamination, although in the beginning seemed a hardship to the industry, has actually proved to be a gain and lasting benefit. So that American made edible gelatine as a whole are superior to imported gelatines in freedom from metallic impurities."

In the first place, every parcel of gelatine imported into this country is analyzed and carefully tested in the laboratories of the Bureau of Chemistry, U. S. Department of Agriculture, before it is released for sale on the American market. American made gelatines are not subjected to this severe and continual scrutiny, although they are apt to be picked up and examined by government inspectors now and then at ice cream and candy plants.

Therefore, why does Dr. Tolman surmise that "American made edible gelatines as a whole are superior to imported gelatines in freedom from metallic impurities?" The fact does not uphold his statement in this regard.

Again, when the Bureau of Chemistry began the investigation on gelatine, referred to by Dr. Tolman in his paragraph headed—"Developments in Manufacturing,"—the writer personally co-operated with the Bureau in its work on gelatine, and the very gelatine that I now exploit under the trade mark of Delft, was at that time the only edible gelatine on the American market which conformed in every respect to the drastic standards established by the new law, and practically every gelatine manufacturer in the United States vigorously protested against the ruling that gelatine be made free from sulphur dioxide and other metallic impurities; but Delft, at that time sold on the American market by a domestic gelatine manufacturer who dealt in imported gelatines to some extent,—showed the way, and American gelatine makers were then compelled to revise their manufacturing methods, and meet the standards laid down by the Food and Drugs Act which Dr. Tolman so strongly advocates.

Delft gelatines have always been free from metallic impurities, and, furthermore, are practically the only gelatine on the market today, supplied in quantity lots, with price uniformity, and guaranteed to be entirely free from harmful and liquefying bacteria.

Dr. Tolman's implication that imported edible gelatines are inferior to American gelatines, is unfair and certainly not justified by facts.

HAROLD A. SINCLAIR

Soldered Ultra

Which Do You Prefer?

Solderless "Tinokeh"

FOR the first time you can get the facts on soldered and welded, or solderless cans, without bias.

Heretofore, every manufacturer of cans would loudly claim that his can was best—whether a soldered can or a welded can—according to the type he made.

No wonder ice cream men were bewildered—and got a lot of wrong ideas on the merits of these two types.

SOLAR ICE CREAM CANS

We Make Both Soldered and Solderless Cans —
and we can therefore honestly tell the truth about each—we need hold nothing back, nor camouflage.

This season we again offer the good old reliable Soldered Ultra, the can that put more pep in can making than any event in the industry. When the Ultra started, it started a march of improvements—and today the Ultra heads the list—millions in service attest its goodness.

Now for the "TINOKEH." Well—you have seen the other so-called welded cans—but if you want a common sense solderless can—that weighs more—that's stronger—that anyone can re-tin—that has no feather-edge fissures—that does not depend on tin to fill up cracks—then—you must see the "TINOKEH."

Pound for pound our prices are 10% lower! Surely write us!

Trade Notes

AUTOMATIC ELECTRIC ICE CREAM CABINETS.

The first iceless ice cream cabinet in general usage is being manufactured by the Nizer Corporation, Detroit, a subsidiary of Arctic Ice Cream Co.

The development of this cabinet was started over four years ago to eliminate for the Arctic Ice Cream Co. the serious and burdensome problems of ice and salt handling and packing. In view of the rather extraordinary success which crowned their efforts, it is interesting to know that the same group of men who are back of the Nizer development, were also back of the National Lamp Works, in their development of the Mazda lamp.

G. P. Cowan, vice-president of the Arctic Ice Cream Company reports that installations of the Nizer cabinet which were made in the stores of Arctic dealers almost two years ago, are operating successfully, and have required a minimum of attention.

In fact, the cabinets have turned out so well that at present this company is rapidly equipping its dealers in all the cities in which it has plants. Altogether, approximately 400 machines are in operation. It is estimated that within another six months, their entire distribution system will have been converted to the iceless method.

In addition to making the equipment for the Arctic Ice Cream Co., the Nizer corporation has been filling orders during the past year from many other ice cream manufacturers throughout the United States. At the present writing, more than 120 cities and towns have one or more of these cabinets in operation.

The Telling-Belle Vernon Co. and Baker-Evans Co. are operating over 150 in Cleveland and the surrounding towns. The M-B Ice Cream Co. of Waco and Dallas, Tex., have over three hundred, it is claimed.

Composite records covering the operation of many of the Nizer cabinets for periods up to two years show that it will be possible to show a saving of 10 to 20 cents per gallon in handling and distributing costs, as against the methods which the industry has used to date.

There are several other outstanding advantages claimed for these automatic electric cabinets. The number of employees engaged in handling ice and salt at the plant, in driving trucks and in packing ice cream will be reduced to about one-third, we are told.

It has been customary in the past to figure upon delivering about 50 pounds of ice and salt with every gallon of ice cream. Since the Nizer system eliminates the use of ice and salt in the retail store, it will only be necessary to carry on the trucks about two pounds of ice and salt to keep the ice cream while in transit. So it is estimated that the load capacity of truck equipment can be reduced in the proportion of six to one. Naturally, the heavy type of trucks will be replaced with lighter vehicles and only about one-third the number. This means faster deliveries and the possibility of longer routes.

In the past, one of the greatest objections offered to the introduction of mechanical refrigeration has been that it required attention from the retailer. The Nizer cabinet, however, is a completely enclosed unit, and is absolutely automatic. On the basis of the service records already established, it can be expected that no attention even from the ice cream manufacturer—other than periodic inspection—need be given for long periods.

The many letters of endorsement from retailers who are using the Nizer cabinet, place particular stress upon the fact that they are no longer bothered with wet floors, rotted woodwork, damaged fountains, interruptions to business, salty taste or soft ice cream.

This latter point will bring to mind the question of temperature control. In the Nizer cabinet, temperature regulation is taken care of by an automatic suction-pressure controller of special design which can be set to cut in and cut out at any desired temperatures. Under normal setting the ice cream remains constantly at from 6 to 8 degrees—the right temperature for serving. It can be readily seen that the elimination of soft ice cream by keeping constant temperature, also eliminates the danger of the formation of ice crystals and the loss of flavors. Dealers using these cabinets state that from one to four quarts more can be served from a five-gallon can.

Another interesting point that has shown itself in connection with this iceless handling method is that the public is attracted by the better quality of the ice cream. Dealers in many instances have reported actual increases in sales

since the installations were made in their stores.

The Nizer corporation recently bought the large plant of the Commerce Motor Truck Company, so that present production may be increased. This new plant is being re-equipped, and will be in operation sometime early in November.

The Housing Company of Waverly, Mass., showed a two-hole cabinet with ten gallons of cream, five of vanilla and five of chocolate which was held in the cabinet from Monday afternoon, October 22, at 2:00 P. M. until Saturday morning, October 27, at 9:00 A. M. without the use of ice and salt. Refrigeration was furnished by means of cartridges containing a chemical solution which were frozen solid at a local ice cream plant and placed in the cabinet directly in contact with the five gallon can.

Two cartridges were used for each five gallon can. Cartridges were changed daily at 9:00 A. M. During the week in order to show the many manufacturers how their system worked it was necessary to completely uncover the top of the cabinet at least fifty times daily why by so doing allowing the warm air to get into the cabinet. Notwithstanding this handicap, the temperature of the cream never registered higher than 11 degrees F. above zero, and was declared by every manufacturer who viewed and sampled the cream to be in a perfect servable condition.

The Housing Company make an ice cream body of various sizes which transports the cream to the dealer with the same cartridges that are afterwards used in the cabinet, thereby completely eliminating the use of ice and salt both in transit and during the twenty-four hour period in the dealer's store. Owing to the limited amount of space obtainable at the convention, they were unable to show the body, but the same good results, we are told, are obtained in the cabinet, as evidenced by actual owners and users of the Waltham System as well as the many concerns who have had the body demonstrated to them. Messrs. James E. O. Connell and H. C. Folger were in charge of the exhibit.

FRANK MULKEY JOINS HERSHEY CO.

Frank E. Mulkey, widely known in the ice cream industry as one of the trade's best posted men on chocolate, has severed his connection with the Elite Chocolate Coated Baseball Co., and now is representing the Hershey Co., Hershey, Pa. Mr. Mulkey is operating from Chicago. He has been identified with the ice cream industry for several years and has a comprehensive knowledge of its problems. He represented his company at the National Ice Cream Exposition.

INDIANA MANUFACTURERS TO MEET DECEMBER 13 and 14.

Dates for the annual meeting of the Indiana Manufacturers of Dairy Products have been changed to December 13 and 14, according to announcement by officials. The meeting will be held at Indianapolis. The association formerly announced that it would meet one day early, but later decided upon the dates given here. Robert Hammond is general secretary of the association.

SALESMEN CLUB PRIZE WINNERS.

Harry Cohn, Haines-Carpenter Co., St. Louis, Mo., was declared the winner of a handsome traveling bag by the Cleveland, awarded by the Salesmen's Club of The Association of Ice Cream Suppliers to the salesmen who had best served the club and the industry as a whole during the past year.

J. W. Mulligan, Rex Extract Co., operating from Louisville, won second prize, a watch chain. Third prize, a fountain pen, was won by R. E. McFarlane, Essex Gelatine Co., Boston.

CONGRATULATIONS, DEAR LADY.

Friends of Miss Sally Mahoney, Hudson Manufacturing Co., Chicago, gathered in Parlor H. at Hotel Winton just before the opening of the National Ice Cream Exposition and helped that lady celebrate her birthday. Approximately thirty gentlemen, young and otherwise, but devoted in their loyalty to this popular young lady, gathered to pay tribute with flowers and candy.

ASHINGTON MAINE
News From Far and Near
ALIFORNIA FLORIDA

Los Angeles, Calif.—Architects Morgan, Walls & Morgan are taking bids for erecting a new creamery plant on Slauson Avenue west of Western Avenue for the Crescent Creamery Company. There will be a two-story milk plant, two-story ice cream plant and one-story boiler house.

Hollywood, Calif.—With a daily capacity of 1000 gallons of high-grade ice cream, the Hollywood Ice Cream Company has started operation in its new home at Santa Monica boulevard and Detroit street. This production limit can easily be increased to twice the present size, according to officials of the company.

The Hollywood Ice Cream Company has a capitalization of \$100,000, and is backed by a number of Hollywood people. The officers are L. W. Thurlow, president; H. C. Fournier, vice-president, and D. A. Eberle, secretary-treasurer.

Particular attention has been paid to the sanitation of the plant and its operation. A full-front plate glass window enables passersby to witness the extreme cleanliness of the factory. No ice is used in the process, mechanical refrigeration being substituted. A fleet of light and heavy trucks has been put in operation to make immediate deliveries to retailers anywhere in Hollywood on short notice, according to President Fournier.

Hutchinson, Ia.—E. T. Barker, manager of the local Hutchinson ice cream factory, and his two brothers, Herman and Bennie of Correctionville, enjoyed a two weeks' outing in the northern country. E. T. left here by car and was met by his brothers at Iowa Falls and they continued on their journey to Black Duck, Minn., where they spent a few days and then went north to Lake of the Woods, Canada, to try their luck at fishing. Without doubt they enjoyed the outing to the fullest extent.

Sac City, Ia.—Ice cream also will be manufactured in the new plant being erected by the Sac City Creamery Co. The plant is to be 67 feet wide in front, 52 feet back with a depth of 132 feet long. Plans have been drawn.

Ottumwa, Ia.—Herman Nelson, formerly of Ottumwa but recently of Quincy, has purchased, in partnership with W. A. Schwindler of St. Louis, the Carpenter Ice Cream Co. of St. Louis. It is the largest firm dealing exclusively in ice cream in St. Louis. Mr. Schwindler is moving to that city from Quincy, but Mr. Nelson will retain his residence here.

Cookeville, Ill.—The Cookeville Ice Cream and Butter Company has been incorporated with a capital stock of \$10,000. The officers are: H. S. Hargis, president; O. O. Allovay, vice-president; W. P. Moody, secretary-treasurer. These gentlemen and O. K. Holladay and Ray Maloney constitute the board of directors.

El Dorado, Kans.—Edward Newbold, who has been with the Snyder Ice Cream Company, Wichita, for the past few years, has taken over the management of the Delicia Ice Cream Company, 215 West Fourth Avenue.

Smith Center, Kans.—The ice cream and butter business of the Smith Center Creamery Co. has reached such proportions that it was necessary for J. P. Edell, the manager, to lease more room. An addition has been built on the north side of the building.

Jackson, Miss.—Magnolia Ice Cream Company, incorporated by J. L. Blackwell, Walter M. Wright, and others.

Maryville, Mo.—The Jersey Ice Cream Company of St. Joseph, and Nebraska City, Neb., has purchased the ice cream distributing company of R. E. Evans and expects to build an ice cream plant here next spring, it was announced recently by T. R. Cox.

Sedalia, Mo.—Contract for the building of the new Weber ice cream plant at 108 W. Sixth street, was let to Dean & Hancock, local contractors. Cost, \$15,000.

Sikeston, Mo.—H. F. Meyer recently sold his interest in the Hebbeler Ice Cream Company to his former partners, Edward Hebbeler and sons, who will continue the business with C. F. Hebbeler as manager.

Newark, N. J.—Martoccio Brothers have established a new ice cream factory at 557 Orange Avenue.

Newark, N. J.—The Crystal Candy Company has discontinued the manufacture of ice cream.

Red Bank, N. J.—Fire destroyed the candy and ice cream manufacturing establishment of the Peach Candy Kitchen.

Secaucus, N. J.—William J. Mraz has just started manufacturing ice cream.

Trenton, N. J.—A. B. Hildebrecht, of the Hildebrecht Ice Cream Co., attended the annual convention at Cleveland.

Allentown, Pa.—The plant of the M. & G. Ice Cream Co., this city, was sold at sheriff's sale recently to George W. Aubrey, an attorney who is said to represent Joseph M. Steele, Sons & Co., Philadelphia contractors, for \$130,000. The plant was completed a year ago and cost nearly \$1,000,000. Creditors will lose over \$500,000, it is estimated.

Allentown, Pa.—Ice cream manufacturers from Allentown, Scranton, Wilkes-Barre, Altoona, Johnstown, York, Harrisburg, Reading, Philadelphia, Bethlehem, Easton and other cities, met at Allentown recently and discussed alleged rising production prices, principally motor transportation and icing cabinets. No immediate increase in the price of the product is contemplated, it was announced.

Waco, Tex.—Geyser Ice Cream Company increased its capital stock from \$100,000 to \$300,000.

Molson, Wash.—The Hazelwood Company has made plans for the enlargement of its plant here. Reports indicate an increase in dairying all over the upper Columbia River valley.

Milwaukee, Wis.—Luick Ice Cream Co., 183 Ogden Ave., has had plans prepared for a four-story 120x120 ft. brick and concrete garage, Van Buren Street. Leenhouts & Guthrie, 424 Jefferson St., are the architects.

Tomah, Wis.—Erwin Kelk, who, with Avery Ranney, started the K. and R. Dairy Company here, manufacturing ice cream, has sold his interest to William Mistele and will move on a farm near Mauston. Mr. Mistele comes here from Oakdale, where he was in the creamery business.

SECRETARY DIXON TELLS CAROLINIANS OF TRIP TO CLEVELAND.

Your secretary has just returned home after attending the convention of the National Association of Ice Cream Manufacturers at Cleveland, Ohio. I am pleased to inform the membership that the Southern delegates were strictly attending to business all the time, with full co-operation from everybody.

At the luncheon given for the Southern delegates in the Bronze Room of the Hotel Cleveland there were sixty delegates present, and there were fifteen manufacturers registered from North Carolina—100 per cent, increase over last year. Our associate members were well represented, and altogether, the writer thinks the North Carolina association has reason to be proud of the loyalty and co-operation shown among its members. Due to the activity of the Southern delegates we succeeded in having W. W. Campbell of Shreveport, La., elected vice-pres. of the national association, and also secured New Orleans as the city for the next national convention. This recognition of the South means much to the industry and your officials pledged the support of the North Carolina association toward making the next meeting at New Orleans a complete success.

In conclusion, your secretary wishes to thank each and everyone of the members of our association for making his stay in Cleveland pleasant, and from now on for the next ten weeks, our efforts will be for the success of the next annual convention of our state association, which is to be held in Winston-Salem, N. C., January 15 and 16, 1924. Won't you write your views as to what you think will make the meeting more successful, and send them to the secretary as soon as possible? The first meeting of the entertainment committee will be held in Raleigh sometime next week. 100 per cent CO-OPERATION, PLEASE!

Yours very truly,

A. E. DIXON, Secretary,

The North Carolina Ice Cream Mfrs.' Ass'n.

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

At Last ~

Nizer Cabinet Saves 15 Cents Per Gallon
Now In Use In Over 120 Cities
Long Service Records Prove It
Absolutely Reliable

THIS public announcement has awaited the completion of successful two-year tests in dealers' stores. The Nizer Automatic Electric Cabinet is the first to fully demonstrate its right to supplant the ice and salt system of refrigeration.

Development of the Nizer was started over four years ago for the Arctic Ice Cream Company, of Detroit — and the perfected machine was adopted by that Company as standard equipment two years later.

The many ice cream companies which are now equipping their dealers with these Cabinets have based their action upon the remarkable records made during the tests — not upon theory.

The unprecedented success of Nizer stands as a second great tribute to the man who developed the Mazda lamp.

Direct benefits of Nizer Cabinets are many — reaching practically every phase of handling, distributing and retailing. Main points are: it saves, on the average, 15 cents net per gallon; it entices old dealers and secures new ones; it preserves ice cream perfectly and increases sales; it is absolutely automatic; and it can be easily transported because the cabinet contains the complete apparatus.

You are extended a cordial invitation to see Nizer Cabinets being built and to personally inspect the 300 stores in Detroit which are already equipped. Our staff of creamery, refrigeration and electrical engineers will thoroughly review with you our records of installation, operating and service costs, and help make a careful analysis of your own situation.

We are in a position to make prompt deliveries.

NIZER CORPORATION
DETROIT - MICHIGAN

The Nizer

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Iceless!

The novelty of "electric-kept ice cream" makes a strong appeal both to dealers and the public. Many testimonials have come in telling of increased sales and increased satisfaction.

The Nizer eliminates salty ice cream, sloppy floors, contamination, crystallization, shrinkage, and loss of flavor.

A typical 8-hole Nizer installation. 4- and 6-hole sizes are also available in styles to take either Memphis or Standard cans.

Nizer Automatic Electric Cabinets cut truck investment, delivery time, driver expense, garage costs, service requirements—to much less than half.

The cabinet is the complete unit, containing motor, compressor, coils and all. That its operation is positively automatic is testified to by a simple fact—it is padlocked.

Showing adaptability to back-bar installation. Nizer Cabinets are finished with bright Monel metal tops and baked black enamel sides. Only the simplest connections to ordinary water and electric lines are needed.

Cabinet

EVERY MANUFACTURER IN OKLAHOMA SHOULD BE AT TULSA NOVEMBER 21-22-23.

The Composition and Manufacture of Ice Cream

By O. E. WILLIAMS*

ICE cream is not a definite product insofar as the composition is concerned, hence the characteristics and food value of this popular food are variable. Ice cream varies a great deal in its content of both fat and milk solids not fat. It varies in other ingredients also to some extent, of course, but these variations are comparatively unimportant and we need not take them into consideration at this time. The composition of ice cream, however, I firmly believe is becoming "better and better" in most places, to use the words of a prominent Frenchman, and I am sure there is much evidence of it.

Types of Ice Cream.

Generally speaking there are two distinct types of commercial ice cream: (a) the ice cream made **with** additional milk solids not fat, and (b) the ice cream made **without** additional milk solids not fat. Usually the former type is rich in skim milk solids, while the latter type is rich in fat—the paramount and most valuable solid in cream. The variation that often occurs in these two types of ice cream is shown in Chart 1.

Chart 1—Types of Commercial Ice Cream.

	Per cent	Per cent	Per cent
With			
additional milk solids not fat, Fat.....	8	10	12
additional milk solids not fat, M.S.N.F., 12		10	8
Without			
additional milk solids not fat, Fat.....	14	16	18
additional milk solids not fat, M.S.N.F., 6		5.86	5.75

The total milk-solid content of the three different kinds of ice cream made with additional milk solids not fat is ordinarily kept at about 20 per cent. This is done in order to obtain a product that will have a smooth velvety texture and a desirable body.

Products containing 8 per cent fat, for instance, are made by increasing the content of milk solids not fat from a trifle over 6 per cent to about 12 per cent by the addition of either condensed or evaporated milk, or both. Skim milk powder also is occasionally used for this purpose.

In the manufacture of ice creams of this type the amount used of milk solids not fat is sometimes less and sometimes greater than the proportions given in the chart. The difficulty that comes from using smaller amounts usually results in the production of a product with a coarse and icy texture (spiny at high temperatures and hard at low temperatures); and when greater quantities are used there is danger of developing sandy ice cream. In case there is anyone here who has never seen or tasted sandy ice cream I shall be glad if you will examine the sample that I have brought from the laboratory and notice how unpalatable and disagreeable the ice cream has become after only seven days in storage.

The fact that so many manufacturers have been troubled with sandy ice cream in recent years is an indication that they have been too liberal in using additional milk solids not fat.

Ice cream made without additional milk solids not fat usually contains from 12 to 18 per cent fat. The variation in skim milk solids in this type of ice cream is very small.

In the manufacture of either type of ice cream a question commonly asked is, what proportion of fat and

milk solids not fat will make the most desirable ice cream? This I believe can be answered best by referring to some work done in our laboratories two years ago on the effect of composition on the palatability of ice cream.

Effect of Composition of the Palatability of Ice Cream

In the spring and summer of 1921 a number of experiments were made to determine what would constitute a relatively good proportion of fat and milk solids not fat in ice cream. The difference obtained in ice creams made in these experiments was measured by means of a market where about 50 daily purchasers had an opportunity to choose from three different kinds of ice cream. Their choice was then taken to represent the degree of desirability of each kind offered.

The results obtained from experiments on the effect of fat content on the desirability of ice cream is shown in chart two.

Chart 2—Preference for Different Proportions of Fat in Ice Cream by 27 Purchasers During Three Consecutive Weeks

Mix	Number	Per cent
F, 18 per cent fat.....	259	82.6
D, 15 per cent fat.....	33	10.4
E, 12 per cent fat.....	24	7.6

The ice cream mixes were all homogenized to prevent the separation of the fat during the freezing process. This experiment seems to prove that the majority of people prefer ice cream rich in fat.

The results obtained from experiments on the effect of milk solids not fat content on the desirability of ice cream is shown in Chart 3.

Chart 3—Preference for Different Proportions of Milk Solids Not Fat in Ice Cream by 128 Purchasers on 30 days in Six Consecutive Weeks.

Mix	Number	Per cent
B, 12 per cent milk solids not fat.....	665	56.1
C, 9 per cent milk solids not fat.....	305	25.7
A, 6 per cent milk solids not fat.....	215	18.2

The fat content in the ice cream made in these experiments was 10 per cent and all mixes were homogenized. More than 50 per cent of the 1185 total sales were in favor of the ice cream containing 12 per cent milk solids not fat and more than 80 per cent of the sales were in favor of ice cream containing at least 9 per cent solids not fat. This experiment shows conclusively the desirability of using additional skim milk solids in the manufacture of these types of ice cream. Further information can be obtained from Department Bulletin 1161, entitled "Effect of Composition on the Palatability of Ice Cream."

How Composition Affects the Cost of Ice Cream.

Aside from the significance that increased amounts of both fat and milk solids not fat have on the palatability of ice cream, it is interesting to note how the difference in composition affects the cost. Figures showing relative costs of the two different types of ice cream are given in chart 4.

Chart 4—How Composition Affects the Cost of Ice Cream

Price of	Fat	8%	10%	12%	14%	18%
milk solids	M.S.N.F.	12%	10%	8%	6%	5%
per lb.	M.S.N.F.	Cost per 100 pounds of ice cream				
Fat						
\$.50	\$.17	\$6.86	\$7.46	\$8.08	\$8.69	\$10.50
.40	.13	5.62	6.12	6.62	7.12	8.62
.30	.10	4.49	4.86	5.23	5.60	6.23

These figures are based on the price of milk solids given in the chart, plus 54 cents for sugar and 15 cents

* Address before 7th Annual Convention of the Central Atlantic States Association of American Dairy, Food & Drug Officials, Washington, D. C., April 24, 1923.

o gelatine. The fat is calculated to come from cream
e ing 40 per cent fat. The cost of the milk solids not
a is reduced by the amount added in the cream.

One hundred pounds of ice cream mix will produce
Gallons of ice cream weighing 5 pounds per gallon,
he cost of one gallon can readily be obtained by
iding the figures in the chart by two and pointing
f three places in the quotient—that is, dividing the
ars and cents by 20.

Three points of interest shown by those figures are
the small difference in cost between the ingredients
he products of the two types of ice cream; (b) the
st of increasing the fat content from 8 per cent to
2er cent in the manufacture of one type of ice cream,
n increasing it from 14 per cent to 18 per cent in the
aufacture of the other type of ice cream; (c) the
e of seasonal variations in the price of milk
ols on the cost of ice cream.

The cost of ingredients for twenty gallons of ice
m containing 12 per cent fat is \$8.08; and for twenty
aons of ice cream containing 18 per cent fat the cost
s 10.55, a difference of \$2.47, or about 12 cents per
aon.

The effect upon cost from increased fat content in
h two types of ice cream is still smaller, and amounts
bout 6 cents a gallon between the ice cream contain-
g 14 and 18 per cent fat.

The influence of a seasonal variation of only 10 cents
e pound of fat will increase the cost about 6 cents per
aon in the manufacture of ice cream containing 8 per
e fat and 10 cents per gallon in the manufacture of
e cream containing 18 per cent fat.

In this brief analysis of the cost of ingredients con-
ained in the poorer and richer kinds of ice cream com-
ely found in the two different types, namely, the ice
ms made with additional milk solids not fat and ice
ms made without additional milk solids not fat,
s very apparent that the poorer ice creams cost al-
t as much as the richer. This is a point that is well
e member in connection with results previously men-
ed regarding the effect of composition on the palat-
bity of ice cream.

The writer stated in the beginning of this paper that
e thought the quality of ice cream manufactured today
s etter than it used to be.

Evidence of this is shown in Chart 5 by a few analy-
e recently made of the two different types of ice cream
o in one of our large cities where there is no effort
e to enforce the regulation of its composition.

Chart 5—Analysis of Ice Cream.

Number of samples	Fat		Average total solids
	High	Low	
Without additional M.S.N.F.	16.5	12	15.1
With additional M.S.N.F.	12.0	9.5	10.6
			35.9

The average total solid content of each type was
ut the same. The fat content was fairly high and
orm in the ice cream made without additional milk
s not fat; and in the ice cream made with additional
t solids not fat the fat content was from 2 to 3 per
e greater than it was two or three years ago. This
vidence of more consideration being given to com-
on in the manufacture of ice cream. Similar re-
s have come from other cities, and no doubt it is a
olition that will soon become general. The composi-
d of ice cream has been on the up grade for many
s and the efforts made to increase the milk-solid
ent of ice cream has in a large measure been respon-
le for the healthy growth of the ice cream industry.

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

Glacifer Shipping Packers

require no ice or salt

An insulated packer with a
dry method of refrigera-
tion.

**A saving of 40% to
50% in Express rates**

Made in 3 gal. and 5 gal.
sizes for either bulk, brick,
or packaged ice cream.
Smaller packages for ca-
tering.

Glacifer dry disc system will
keep ice cream in dealer's
cabinet for 24 to 36 hours
without ice or salt.

What Does it Cost a Gallon to Deliver Your Ice Cream?

The test made by the engineers from the Massachusetts Institute of Technology showed that ZERO Refrigerator Bodies are the most economical delivery unit.

The Moisture Boy is a Greedy Cuss

When cork and other insulating materials weigh nothing and when building materials and metal necessary to make a refrigerator body longer, higher and wider, so as to accommodate the cork or other insulating materials, weigh nothing, then will be the time when refrigerator bodies will be lighter than ZERO Refrigerator Bodies.

**BUY YOUR REFRIGERATOR BODIES BY THE POUND
—TRANSPORTATION COSTS MONEY (\$4.00 per ton a day)**

WANTED TO BUY—Used ice cream equipment. Forty quart C. P. freezer, homogenizer or viscolizer. 300 gal. pasteurizing vat. 200 gal. pasteurizing vat. Set cooling coils. 100 ice cream tin. 200 ice cream cans. 100 gal. starter or holding vat. Address: R-614, The Ice Cream Review. 11-23

WANTED—Second-hand ice cream tin. Must be in good condition. Write J. Ridder, Louisiana, Box 518. 14

WANTED TO BUY—An ice cream plant in a good town. Address R-697 The Ice Cream Review. 11-23

POODLE DOG ASSOCIATION
President, J. E. ENRIGHT,
717 Railway Exch., Chicago.
Secretary, A. G. ROSE,
Rose Spec. Co., Des Moines, Ia.

To the Members of the Poodle Dog Association:

Secretary Crowley advises that the annual convention of the Iowa Ice Cream Manufacturers Association, will be held at the Hanford Hotel, Mason City, Iowa, either on December 10-11-12 or December 11-12-13. (Correct dates will be given in your next notice.)

We are advising the members of the Poodle Dog Association—together with other concerns to whom it might be of interest to be represented—this early, so that you may plan to be among those present.

The manufacturers association are planning a bigger and better convention than ever before. They are arranging for at least two joint sessions of the ice cream

manufacturers and the Poodle Dogs that will be both instructive and entertaining—and worth-while.

The Poodle Dogs are arranging to put over the share of the convention in good shape—and of course they will. In order however to perfect our plans it is desirable that we know as early as possible how many Poodle Dogs, (including new members) will attend. We want every Poodle Dog at the Iowa convention. Will you be there? If not personally, how many representatives will attend—and who?

Don't lose sight of the fact that this is the one big opportunity of the year to meet your customers all together, socially, and under conditions that bring about the closest possible feelings of friendship and goodwill. Last year over eighty Poodle Dogs answered the roll call. Let's make it One Hundred this year.

Looking forward to your early and favorable reply and thanking you for your co-operation in the past we are,

POODLE DOG ASSOCIATION,
A. G. Rose, Secretary

A beautiful exhibit at the National Dairy Exposition by the Creamery Package Mfg. Company of Chicago.

IT AGITATES AS IT HEATS — INTERNALLY

Mixing the Batch Properly Makes Good Ice Cream Better

THE quality of your ice cream depends as much upon the kind and condition of the batch of mix that goes into the freezer, as upon the freezing process itself.

Managers of successful Ice Cream Plants all over the country personally superintend the mixing of their batch, knowing that the freezing will practically take care of itself.

Cherry Ice Cream Batch Mixers, Coolers and Aging Vats

They especially favor our Horizontal Twin Coil Mixer here illustrated, because it permits uniform mixing and ripening of the whole batch, under positive temperature control.

They appreciate the fact, too, that it serves equally as a batch mixer, a ripener, a cooler, a pasteurizer and an aging or storage tank.

The fact that the coil fills practically the whole interior, thus assuring uniform tem-

peratures; and also the manner in which the patented scraper blades prevent sugar from collecting on the bottom, commend the Cherry.

Its sturdy construction, its mechanically-correct gearing, its heating and cooling coil (Single or Twin) properly hung and with long bearing surfaces, make this Mixer outlast two or three of the ordinary kind.

Send for Bulletin No. 2031R for full particulars.

DECEMBER 1923

SOUTHERN ice cream manufacturers are preparing to move on Little Rock. Plans seem to be well shaped for the best convention ever held by the Southern Association of Ice Cream Manufacturers. Officials of that body for several weeks have been occupied almost wholly in work to this end.

This convention will be watched with the greatest interest. Ice cream men of Dixie have met and overcome so many obstacles in the last few years, their methods of doing things have attracted wide attention. After getting their own affairs in good shape with years of hard work, they went to Cleveland in great force in October and did not let up until they won the next convention and saw one of their ablest men elected a national officer.

The convention plan this year is for wider representation of the Southern states in the Southern association. Truly, ice cream men of the "solid South" seem to be working fast toward making their section safe and solid for the ice cream industry.

The Southerners' convention always is colorful. Theirs is a spirit found nowhere else. If you do business anywhere in that territory, you'll do well to have a ringside seat.

IT LOOKS like a merry Christmas for the ice cream industry. In all sections the industry shows a promising condition. The approach of the happy Yuletide finds general satisfaction prevailing, not only over developments in the fleeting year, but also over the favorable outlook for the future seems to hold in store.

In more than one way we seem to be nearing an "ice cream Christmas." With members of the industry more than ever alert to their opportunities, the winter consumption problem never has seemed so near solution. The past autumn has been marked by a new attitude on the part of ice cream manufacturers. Close observation shows less of the listless, resigned, half-hearted spirit that formerly prevailed at this time of the year.

A new heart and a new hope seem to have come to the industry. Optimism has grown with the realization that this industry can be developed to a great measure of all-year-round permanency.

Advanced methods, mechanical efficiency, fair practices have done away with many problems of the past. Development of personal contact has brought about a scheme of closely knit relationship that has killed much of the old feeling of self-sufficiency. The industry's line of progress may well be described as consisting of interlocked hands extending from sea to sea, the strong bearing up the weak, and all striving for common advancement.

The ice cream industry never before faced a Christmas season with so many cheering promises in view. The prospect of greater progress in winter consumption looms bright.

Uncle Sam's sons and daughters and grandchildren no doubt, will have more ice cream on their Christmas tables this year than ever before. Next year, it seems sure, they will have more.

THE convention season is away to a flying start. With the national association having set the pace in October, our friends in Texas and Oklahoma swung into action last month with record conventions. The Oklahomans get down to brass tacks on November 21, 22, and 23, getting a lot of weight off their chests at that time, and feeling better for it.

The Lone Star gentlemen got up from their Thanksgiving tables and gathered at Galveston to take a general survey of conditions in their industry. It was the Texans' first meeting in that city. Delegates felt pretty well satisfied with their visit, for they had a splendid convention, of which you will hear more later.

These conventions were preceded by spirited sessions of the Ice Cream Manufacturers' Association of Pennsylvania and New Jersey, at Altoona, Pa., and the Association of Ice Cream Manufacturers of West Virginia, at Parkersburg. Splendid work for the good of the cause is reported from both of these affairs.

There are more good conventions for this month. See page 6 for our Bulletin of Events.

IN LAST month's issue we commented upon an association secretary who handles conventions like he handles his business systematically. Why not? That's the way all conventions should be handled. It is more the fault of indifferent members than of association officials that more conventions are not conducted in a fully business-like way.

A convention is an enlarged framework of a business institution. It concerns itself with the broad and general matters of an entire industry. To handle this enlarged scheme it is necessary for the convention to have the co-operation of the representatives of these business houses just as those gentlemen in turn must have the co-operation of their associates in running their private enterprises.

This writer, who assists abler and wiser men in editing this publication, in turn is dependent upon the co-operation of several other people, including the cheerful young lady who copies his longhand into typewriter language, the efficient linotype operators who then transcribe that copy to type, the highly trained artisans who set that type to printed pages, and so on to many others.

All life is a business proposition. Among the first things our Master said on earth were, "I must be about my Father's business."

He then selected twelve men for his board of directors. It is significant that among other things, all reached co-operation.

WHERE is a sound condition at the bottom of the little business flurries that have had some of us waiting of late. Unemployment is passing, slower in some places than others, but passing just the same. People are going to work and making money. That means they will spend some of it, too.

Banks of the country have deposits of \$37,000,000,000. That's a splendid condition, reflecting stability. Postal savings throughout the country showed an increase of \$1,000 for the month of October, bringing the total savings to \$132,007,209.

People in the South are happy over cotton at 35 cents. That is something that will do the whole country well.

With old Santy on the way, peace seems to have descended over this nation and its industries. With a new year coming we seem to be shedding lots of our troubles and getting ready to begin another campaign with the spirit of confidence and optimism that wins victories and great victories.

RIGHT now you will be able to find time to visit your dealers who are lagging in sales. If winter production is to mean much, an important part of the work lies upon the dealers. Let them know that you still are in the running for business and that it means something to them to keep after it, too.

WE MADE some inquiries at Cleveland relative to collections. We were seeking information, not only for the purpose of passing it on to our readers, but we wanted to find out why some folks in the ice cream business find it hard to pay their advertising bills. So, you see, we were doubly interested in finding out the facts. When we find it hard to meet our bills for supplies and labor we want to know the reason. The question ceases to be one of mere editorial interest and becomes one of bread and butter.

We are going to speak frankly to readers of The Ice Cream Review. In the other dairy trade journal fields collections are good. We publish a milk dealers' paper and a butter and cheese manufacturers' journal. Advertisers in these fields pay their bills promptly.

In the ice cream branch of the dairy industry the situation is different. Collections are generally slow and many advertisers give as their reason that ice cream manufacturers don't pay their bills promptly.

We have not been able to understand this. Most ice cream manufacturers sell for cash. Why should they hold it back from the supply man?

This is the question we wanted answered when we were at Cleveland. We didn't ask the supply men for the answer. We asked the men who manufacture ice cream—many of them—and we got the answer.

Here it is: These men told us that it is the fault of the equipment manufacturers and the supply men that they don't get their money when they should. Keen competition among them has resulted in many cases in loosely worded contracts and unreasonable terms of credit. The manufacturers told us that many salesmen "over sell" their customers. They load manufacturers up with equipment and supplies that they cannot afford. The chief aim seems to be to sell the goods—never mind the money, just sell, sell, sell.

If this indictment is correct, and the ice cream manufacturers themselves say it is correct, it is an unhealthy condition in the industry. Inflation of credits is dangerous and sooner or later the business is bound to suffer.

Every man in the industry should feel the responsibility of getting the business on a sound basis. Everybody will make just as much ice cream and just as many supplies will be used. Loose business methods don't mean more business, but they are sure to mean more losses.

Ice cream manufacturers can help correct matters. They can pay their bills promptly and they can frown upon loose credits, which generally mean higher cost of doing business. Gentlemen, let us get this business on a more sound basis. We can all help to do it. Then you will get your money when it is due so that you can pay the other fellow. We need more circulation of money in the ice cream industry.

Now, folks, if any of you have other views, or reasons to offer for poor collections, let us have them. This is an important question.

THE winds of chance never before beckoned so strongly to indiscreet imagination as now. A popular pastime in this age of shams, sheiks and shimmies is to wonder where the fellow who has made good got his luck.

Many of us are looking for the magic tip; we want the royal road to success. Some manufacturers stick to the old-fashioned method of hammering away at the business-end of the hammer, making the best product they can, and taking their gains as they come—slowly at best, but surely, nevertheless.

In recent years the ice cream industry has seen a number of 40,000-gallon-a-year producers with seeming suddenness become 100,000-gallon producers. This leads some of us less fortunate to wonder what was the trick to it.

Success always looks easy in the end. Yet, if you will consult the man who has emerged from the lower strata, you will be astonished to know that he has faced all the obstacles any of us ever met. Disappointments came to him as they come to you, and as they come to the writer of these lines. Failures were his as they have been yours. Mistakes he has made, as you have made them. All that you have known in the way of troubles and turmoil have been his portion—all the heartaches and worries that come to men of this flesh. And he groaned under this weight just as loudly as you and this writer have under ours. But through all the bitter stretches he stuck to the guns, held to the faith, and struggled on and hoped on in spite of it all. When the rising tide came he "rode it up" and it looked easy.

Some of these days he will turn over in his grave as somebody passes his epitaph and says, "Gee, what a lucky stiff this guy was. I knew him when—"

BRIGHT and early one morning recently our mail yielded a letter from a gentleman who is greatly interested in seeing problems worked out in this industry, and although he thought he was covering other matters in his letter he struck right at the heart of that particular point.

"You are the most human people," wrote this gentleman to The Ice Cream Review, "that circulate a magazine in the dairy industry."

That gives rise to a question. What is an industry but the symbol of human efforts and human service? The ice cream industry is made up of the hopes, emotions, ambitions and heart-beats of thousands of human beings. It is a human thing itself.

How many problems do you think would stand long if we all could just pass along the spirit of brotherhood? With more human understanding developed, many of our supposedly difficult problems would solve themselves.

WHEN a friend slaps you on the back along about Christmas time and says, "How's business?" what are you going to tell him?

The production peak passed several weeks ago. It is

generally agreed that we have had a good "season." Results have been most satisfying in every way. Business in general lines was good and this helped along ice cream sales.

But ice cream manufacturers, themselves, are deserving most of the credit. There has been good spirit shown on most every hand. In spite of unfavorable weather at the outset, manufacturers in every section showed disposition to stick to the guns. Most every legitimate means has been employed to attract business. But at the same time there has been a re-assuring display of co-operation that speaks well for efforts along this line.

The usual decline of sales began in the fall, a little later than usual and not quite so marked. The next few weeks will be watched with interest. They will tell the story of just how successful the year can be regarded from an ice cream viewpoint. If the effort continues, if the spirit holds up and cabinets are kept closed the job, there is every reason to believe that we shall soon point back to 1923 as one of the best ice cream years in history, if not the best.

Otherwise, we shall just look back upon the passing of another successful "season," and still be far from victory. The ice cream manufacturer has much more to do with this than the public. The public moves on when it is led. We must do the leading.

BULLETIN OF EVENTS

- Southern Association of Ice Cream Manufacturers**—Eleventh Annual Convention, Little Rock, Ark., December 4, 5 and 6. Convention headquarters, Marion Hotel. Secretary, J. V. Clopton, Decatur, Ala.
- Pacific Ice Cream Manufacturers' Association**—Annual Convention, Vancouver, B. C., Dec. 3, 4 and 5. Secretary, Ben Walker, Tacoma, Wash.
- Arkansas Ice Cream Manufacturers' Association**—Annual Convention, Little Rock, December 3. Convention headquarters, Marion Hotel. Secretary, G. A. Meyer, Stuttgart.
- Association of Ice Cream Manufacturers of New York State**—Annual Convention, Rochester, N. Y., December 5 and 6. Secretary, A. M. Le Messurier, Box 676, Syracuse.
- Association of Ice Cream Manufacturers of Iowa**—Annual Convention, Mason City, December 10, 11 and 12. Convention headquarters, Hotel Hanford. Secretary, P. N. Crowley, 28 Good Block, Des Moines.
- Metropolitan Ice Cream Manufacturers' Association**—Annual Convention, Newark, N. J., December 11. Convention headquarters, Newark Athletic Club. Secretary, W. H. List, Fulton Ice Cream Co., 596 Market St., Newark, N. J.
- Illinois Association of Ice Cream Manufacturers**—Annual Convention, Chicago, December 11 and 12. Convention headquarters, Hotel Sherman. Secretary, N. Loewenstein, 155 Clark St., Chicago.
- North Carolina Ice Cream Manufacturers' Association**—Annual Convention, Winston-Salem, January 15 and 16, 1924. Convention headquarters, Robert E. Lee Hotel. Secretary, Arthur E. Dixon, Fayetteville, N. C.
- Kansas Association of Ice Cream Manufacturers**—Annual Convention, Wichita, January 22, 23 and 24, 1924. Secretary, B. T. Perkins, Pittsburg.
- Louisiana Association of Ice Cream Manufacturers**—Annual Convention, Baton Rouge, sometime in January, 1924. Secretary, N. F. Manning, Monroe.
- California and Southwestern States Ice Cream Manufacturers' Association**—Annual Convention, Los Angeles, Cal., January 11 and 12, 1924. Secretary, Robert F. Grosse, 5792 San Pablo Ave., Oakland, Cal.
- New England Association of Ice Cream Manufacturers**—Annual Convention, Boston, January 16 and 17, 1924. Convention headquarters, Copley Plaza Hotel. Secretary, W. P. B. Lockwood, 51 Cornhill, Room 401, Boston.
- Mississippi Ice Cream Manufacturers' Association**—Annual Convention, Laurel, January 8 and 9. Convention headquarters, Hotel Pinehurst. Secretary, N. D. Brookshire, Meridian.
- Ohio Association of Ice Cream Manufacturers**—Annual Convention, Columbus, January 31-February 1. Convention headquarters, Deshler Hotel. General secretary, W. A. Wentworth, 509 Outlook Bldg., Columbus.
- Michigan Allied Dairy Association**—Annual Convention and Exhibition, Kalamazoo, February 4, 5, 6, 7 and 8, 1924. Secretary, R. F. Frary, Lapeer.
- Michigan Dairy Boosters**—Annual Convention and Exhibition, Kalamazoo, February 4, 5, 6, 7 and 8, 1924. President, C. C. Yuncker, Zipp Manufacturing Co., Cleveland, O.
- Western Canada Ice Cream Manufacturers' Association**—Annual convention, Moose Jaw, Sask., February 6, 7 and 8, 1924.
- Minnesota State Association of Ice Cream Manufacturers**—Annual Convention, St. Paul, January 10 and 11. Convention headquarters, Hotel St. Paul. Secretary, J. J. Farrell, 622 Hamm Bldg., St. Paul.

Have You Noticed the Growth of the "Electric Weld"?

If a soldered can is good, why weld?

If a welded can is better why make, sell or buy both?

We make but one can—the same one, refined and improved during five satisfactory years—The "Electric Weld"—sold by Jobbers or direct representatives everywhere.

All in Readiness for Great Dixie Conventio

*Officials Confident of Record-Breaking
Attendance on Eve of
Convention*

*Attractive Program Features Announced.
Plenty of Entertainment Promised
by Arkansans*

Arkansas State Capitol.

ICE CREAM manufacturers of the South are preparing to move on Little Rock, Ark., from all directions. A record-breaking attendance is forecast by officials of the Southern Association of Ice Cream Manufacturers on the eve of their eleventh annual convention, December 4, 5 and 6. Correspondence to Secretary J. W. Clopton of Decatur, Ala., assures wide representation, the secretary announces.

Other officials are equally optimistic. President M. J. Costa of Athens, Ga., has invited manufacturers of different Southwestern states to the convention. He believes his call will be answered by many manufacturers of Oklahoma and Texas. Members of the industry in these states have such good conventions of their own that it has been hard to attract them to Southern conventions in the past. It is believed that the Texans and Oklahomans will attend the Southern convention in great force this year, however.

A survey of the Southern industry has led officials to believe that members of their flock are looking forward to the convention with great interest. The conference at Cleveland of Southern delegates to the national convention showed manufacturers of Dixie had given much thought to their coming convention. Different state leaders at that time gave assurance that their states would be well represented.

Bulletins have been flying thick and fast since the national convention and an eleventh-hour check on the situation has prompted the secretary to notify Hotel Marion to be in readiness for heavy registration.

Newspapers of the South have been taking considerable interest in the convention. News stories issued

by The Ice Cream Review to the press have been printed in virtually very leading daily from Texas to Virginia.

Elaborate Program.

Hints at the attractions to be provided have been drifting to the Southern manufacturers through The Ice Cream Review from time to time. The complete program printed in this issue seems to bear out all former expectations.

The convention program consists of speeches by men who have been keen students of ice cream manufacturing problems for many years, including Prof. A. C. Baer of Stillwater, Okla., widely known for the problems he has solved through The Ice Cream Review, and many of the South's leading ice cream manufacturers. Problems peculiar to the Southern ice cream industry will be discussed in addition to general problems. Professor Baer's theme will be "The Development of the Ice Cream industry in the South."

As was expected following the Cleveland conference, it was found to be impossible for the association to finish its business in two days to make room for entertainment features, and it has been decided to add one day to the business program. The convention, therefore, will open December 4 and close the afternoon of December 6, when delegates will entrain for Hot Springs.

Southern Dairy Officials Invited.

Success to efforts being made by Secretary Clopton at this writing will mean additional bright features to the program not shown in this issue. Mr. Clopton has invited representatives from the state dairy and food

BESTOV KLEEN-KUTTER ICE CREAM BRICK MACHINE

Patents Pending

the imperfections of previous types of cutters in a most ingenious way.

These changes have produced a radically different machine and so much more satisfactory as a brick cutter for your plant, that the Kleen-Kutter calls for your immediate consideration.

First of all, the cuts of ice cream are fed to the conveyor belt by a forward thrust of the knife blade. This means that the cuts are automatically spaced a distance apart from each other and therefore cannot stick or freeze before being wrapped.

Secondly, the action is so arranged that there is no back stroke of the knife blades through the ice cream. This makes guards, bearing on the top of the ice cream slab unnecessary. It also prevents ragged, rough surfaces caused by the cream clinging to the blade as it withdraws from the cream. The small knife needed to cut slices and pints is not joined to the big knife, and as it cuts **after** the quart knife has completed its cutting, there is no possibility of ice cream clogging around these knives.

There are many other points of construction which are convincing of Kleen-Kutter's superiority, but perhaps the chief reason why you should give this machine very careful consideration is the fact that it is **very moderately priced**.

You incur no obligations of any kind by investigating this machine to the fullest extent. Just fill in and mail this coupon.

THAT HOT SPRINGS TRIP IS A BRIGHT FEATURE OF THE SOUTHERN CONVENTION.

departments of every state in the South to attend the convention. This has been done, says the secretary, "so we may have a better understanding regarding the co-operation which is so essential to the advancement of our business."

One of the particular features of the convention will be the delegates' visit to Hot Springs, the world-famous resort. Immediately after the winding up of business on December 6, delegates will leave Little Rock and spend the following day at Hot Springs.

This trip will be made at no additional expense. Delegates have been asked to purchase "all year around" tickets to Hot Springs, with stop-over privileges. This will give them the right to the trip to Hot Springs after "stopping over" at Little Rock for the convention. The secretary has asked delegates to travel over the Missouri Pacific Railroad from St. Louis, Kansas City and Memphis, so as many as possible can make the trip together.

The convenience of the transportation arrangements will allow delegates the opportunity to be the guests of Memphis ice cream manufacturers, stopping off in that city early in the morning of December 3 and being entertained by the local ice cream manufacturers until 2 o'clock in the afternoon.

S. S. Dent, Fortune's, Inc., Memphis, informs The Ice Cream Review that preparations are being made to entertain the delegates between trains. These plans include a luncheon, a ride over the city and a visit to one of the Memphis dairy plants.

Entertainment Program.

Long famed for its attractive entertainment programs, the Southern convention this year will be no exception to the rule, according to officials. The entertainment program, published in this issue, shows the usual lavish hospitality of the Dixie Flyers. Great care has been taken in shaping up this program, according to P. N. Miller, Jr., secretary of the Dixie Flyers, though he leaves it for the manufacturers themselves to say as to whether this work has been well done.

Provisions are made on the program for the Dixie Flyers' usual evening of entertainment, the Southern association's annual banquet, followed by a dance, and various bits of fun and frolic for the manufacturers' ladies.

In no other association in the industry is the social scheme so highly developed as in the Southern body. The ladies are just as much a part of a Southern convention, veteran delegates believe, as anything connected with the program. The manufacturers have been urged to escort their ladies to the convention as usual this year. Extensive preparations have been made for their entertainment, we are told.

This will mark the end of the first year of the ladies' organization. Miss Sally Mahoney, Hudson Manufacturing Co., Chicago, is president of the Ladies' Auxiliary, organized at the New Orleans convention last year. In this issue she calls upon her members to attend the convention in great force.

Exposition to be Held.

Definite decision to hold an exposition of ice cream manufacturing equipment in connection with the con-

vention assures delegates of the opportunity to look at the products of suppliers covering the Southern states. There will be approximately 40 booths. The exposition will be in the Hotel Marion. Secretary P. N. Miller is in charge of the exposition.

C. Mortensen, president of the Dixie Flyers, is confident that the convention will be largely attended. Members of his organization have been working in the interest of the convention for several months.

Arkansas Convention December 3.

The annual convention of the Little Rock Ice Cream Manufacturers' Association will be held one day before the opening of the Southern convention. The Arkansans will hold one session at Hotel Marion on December 3, after which they will give way to their visitors. "We will join them 'in making the Little Rock convention the best the Southern association has ever held,'" use the words of President, E. A. Watson, Watson & A. Little Rock.

* * *

ARKANSANS READY.

LITTLE ROCK, Ark., November 20—(Special to The Ice Cream Review) — Local preparations are complete. The stage is set for what local ice cream manufacturers believe will be the South's greatest ice cream convention.

The convention hosts have been giving the finishing touches to their reception plans. All Arkansans are behind these plans, judging by the enthusiasm prevailing. Ice cream manufacturers of the state have joined hands in efforts to show their visitors an enjoyable stay in their midst. To this assistance has come Earl W. Hodges, local capitalist, former secretary of state, and widely known booster for Southern

industries. Mr. Hodges is one of the South's greatest manufacturers. Not only has he consented to address the manufacturers' convention, but also he is lending his personal assistance in preparations for the coming of the Dixie "ice cream brigades."

At the head of the local ice cream forces is E. A. Watson, president of the Arkansas Ice Cream Manufacturers' Association, who has been putting forth strong efforts toward making everything in readiness. Mr. Watson has been assisting P. N. Miller, secretary of the Dixie Flyers, in preparations for the exposition, a local man handling applications for space in the absence of Mr. Miller.

No one is more enthusiastic over the convention than G. A. Meyer, secretary of the Arkansas Ice Cream Manufacturers' Association, operating at Stuttgart. In a recent statement Mr. Meyer, who has for several years been active in state association work, expressed the belief that Southern manufacturers will find their visit to Little Rock one of the most pleasant of any they have ever made.

"Tell the manufacturers to mark December 7 on their calendar," he said, referring to the day to be spent at Hot Springs. He gave an interesting description of this beautiful place.

"That will be a feature in itself," he continued.

(Continued on page 26)

Dixie Hears Convention Call

Are you ready, O Virginia,
Alabama, Tennessee,
People of the Southland, answer!
For the land hath need of thee.
"Here," from Sandy Rio Grande,
Where the Texan Horsemen ride,
"Here," the hunters of Kentucky,
Hail from Chatter Wah's side;
Every toiler in the cotton,
Every rugged mountaineer,
Velvet-voiced and iron-handed,
Lifts his head to answer "Here."

Arthur Guiterman.

Perry Building PHILADELPHIA

New Plant in Tennessee Ranks With South's Best

Union Ice Cream Company Erects \$225,000 Structure at Nashville and Equips it With Modern Machinery Throughout

IN the construction of the new plant at Nashville, Tenn., of the Union Ice Cream Co., an organization with the experience of thirty-five successful years behind it, nothing known to the modern industry has been spared in an effort to make the factory compare favorably with any in the country. It was erected and equipped at an expense of \$225,000. W. E. Drake is head of the company. He is well known in association circles.

The plant, which has two stories and a basement, is located on the western extremity of the business district of the city. It fronts seventy-five feet on Broadway, one of the main thoroughfares of the town, and one hundred and seventy-five feet on Twelfth avenue. One of the largest electric signs in the South, standing high over the structure, carries the message, "Union, Cream of Quality."

The structure is regarded by the management as a monument set up through the long years of its existence by its honest efforts to manufacture a quality product.

A fleet of thirteen trucks is maintained, six of these vehicles being self-refrigerating. They range in size from one and one-half to three tons, and are always kept in neat condition, the drivers being uniformed. The company maintains its own dairy and uses the output of thirteen others when in full operation. Only the choicest milk is used, a premium being paid over the regular market price to get this.

Located in the basement, the compressor room is equipped with two York machines of thirty-five and forty-ton capacities, which easily afford one hundred

tons of refrigeration, this being sufficient to operate ice tank containing 253 cans of 300 pound capacity in addition to that required for other purposes. However, during the peak run it is sometimes necessary to buy more ice.

Gravity System Employed.

The ice storage room has a capacity of sixty tons of block ice. A Creasy crusher located in a pit adjacent to the ice storage discharges into an elevator boot, and

View of plant from the street.

crushed ice is elevated to the third floor, and loaded by gravity through shutters to service cars and the forms below. The can washing room and boiler room also are located on the lower floor, as likewise are the salt bins, the capacity of which is fifty tons. Like the crushed ice, the salt is elevated and loaded by gravity.

The Broadway entrance has a street level, and the

View of hardening room.

general and private offices are located here. Directly back of these is the loading platform with a frontage of seventy-five feet. Convenient to the platform are

Tuesday Night

Entertainment, compliments of Dixie Flyers.

Wednesday Night

Annual Banquet and Dinner Dance.

Thursday Night

Tour to Hot Springs.

INCOMPARABLE

A THOUSAND years ago, before the image of awesome Bodhi Dhama, the monks of Zen were wont to sip from lacquered bowls an amber liquid—esteemed by them a priceless ingredient of the elixir of immortality. Thus was the drinking of tea cloaked with mysterious and ceremonial ritual during the reign of the Japanese Emperor Shomu in the year 729.

As the ruddy afterglow brightened the bamboos with delight, midst the murmur of bubbling fountains and the sighing of the pines, the precious leaves were brought forth for the tea ceremony. "These tea leaves must have creases like the boot of a Tartar Horseman, curl like the dewlap of a mighty bullock, unfold like mist rising from a ravine, gleam like a zephyr-kissed lake, and be wet and soft even as fine earth newly swept by the warm spring rain"—so ordered the ancient dynastic law. For to the chosen few, the tea ceremonial was to partake of the "froth of the liquid Jade", a rare fragrance and aroma that strengthened the will and delighted the soul—a flavor masterpiece.

So, too, as in days of old, qualities apart from the ordinary distinguish a superior product. So with Vannyl, truly a flavor masterpiece. For to ice cream this incomparable flavor imparts a richness of taste that delights the user. At your request we will be glad to tell you the story of how Vannyl creates a preference for your product beyond your fondest expectations.

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Illinois Association Meets in Chicago This Month

Glowing Record is Behind Pioneer Association of the Industry. Good Convention Program Promised

THE pioneer association of the ice cream industry will be in session in Chicago, December 11 and 12, when the Illinois Association of Ice Cream Manufacturers meets at Hotel Sherman.

The convention will mark a quarter of a century of constructive work in the interest of the ice cream trade of Illinois, the twenty-fifth year of the association's career, beginning with the close of the convention.

In that space of time this association has held probably the liveliest conventions of any of the state organizations. With such a glowing record, the association officers are sure that the meeting this month will be well attended. Secretary N. Loewenstein promises that the program discussions will be of the greatest interest, much care having been taken in working up subjects of particular interest and in getting for these subjects men well qualified to discuss them.

To Mr. Loewenstein's ability to put together good programs goes much of the credit for Illinois' successful conventions, other officers say. Mr. Loewenstein has

been identified with the association for several years. In the fore part of 1906 he was with the "Three-I" Association of Ice Cream Manufacturers, which gave way that year to the National Association of Ice Cream Manufacturers. With others, Mr. Loewenstein re-organized the old Illinois association in 1906, after the passing of the "Three-I" association. He was named the first secretary, and with the exception of the years 1909-10-11 has held that post ever since.

Among the subjects to be discussed are: "Refrigerated Cabinets," "Service Charges," "Truck Delivery," "Some Trade Abuses," and "What Constitutes Quality in Ice Cream."

L. W. Roszell, Roszell Ice Cream Co., Peoria, is president of the association.

I have never missed a Southern ice cream convention without feeling I had suffered a tremendous loss, and I never miss one unless unavoidable circumstances prevent me from attending. The benefits to be derived cannot be calculated in dollars and cents, but they are just as tangible and necessary as your bank account. It is my intention, if nothing prevents, to attend the convention at Little Rock, and I sincerely hope all of our Southern friends will be there.

Yours very truly,

W. J. BARRITT

Vice president Southern Association of Ice Cream Manufacturers.

KANSAS PREPARING FOR CONVENTION IN JANUARY.

Committees are at work in preparation for the annual convention of the Kansas Association of Ice Cream Manufacturers, which will be held at Wichita, January 22, 23 and 24. Hotel Broadview has been selected by the arrangements committee for convention headquarters, it was announced in November. The committee says this hotel is well equipped to handle the convention.

Officials say efforts will be made to have the subject of mechanical refrigeration well covered at the convention. The program committee has asked members for suggestions as to subjects to be discussed.

A bulletin issued last month by President W. L. Chappell and Secretary B. T. Perkins asks members to make early reservations for the convention.

THE CITY OF ROSES

Little Rock is the capital city of Arkansas

Its population, according to the official census is 65,000.

The combined city population which it serves as an actual business center is about 100,000.

It is the central part of the state and enjoys an altitude of 275 feet.

The city, and its sister community, North Little Rock, (a separate corporation) are divided by the Arkansas River, flowing West to East at this point.

Two new concrete arched bridges, which will connect the two cities, are now under construction. In addition, there are three railroad bridges, two of which, in emergency, may be used for truck and wagon traffic.

C. A. Kent, "sage of Kentwood," organizer and first president of the Southern association, presiding at the first meeting, held at New Orleans ten years ago. This photo was snapped by The Ice Cream Review's cameraman when he returned to New Orleans last year for the tenth annual convention of the association. "Mr. Charlie" is widely known and loved in the Southern industry.

man Hotel, where we shall feast, will be found a hostelry that has entertained titled persons of renown in many countries. There are many points of national interest at Hot Springs. There are streets and pathways winding up the mountain side to the government hospital and bath-houses, where the government has spent millions in their erection and upkeep.

"Then there is Central Avenue with the bath-house row awaiting inspection, beautiful residences dotting the outskirts of the city, and many other show places too numerous to mention.

"With the weather promising, we shall show you a picture beautiful, making you return to your homes

prepared to do a bigger year's work than ever before. The great line of entertainment in store for delegates will make all want to make ready for the 1924 convention to tell others about Little Rock and Hot Springs.

"Members of the Ladies' Auxiliary have some plans of their own for entertaining delegates. There is much mystery surrounding these plans, but wherever the ladies are concerned there usually is something nice to be expected."

* * *

SOUTHERN ASSOCIATION HAS GLOWING RECORD

WHEN the Southern Association of Ice Cream Manufacturers meets at Little Rock for what is expected to be its greatest convention thus far, no one will be happier than the members of that small

Chris Hollinger, charter member of the Southern association, and one of his partners in industry, C. W. Smith, an enthusiastic Dixie Flyer and Texas Long Horner.

band that met at New Orleans just eleven years ago to see if they could not correct some of the trade abuses that were so sorely besetting their industry.

It was last year that the association returned to New Orleans, the scene of the first meeting, and brought back memories of the time when nine manufacturers and

suppliment met at the De Soto Hotel and formed principles for co-operative efforts in those Southern states that at that time had no state associations. years previously they had formed what is now the ice association in the world—The Louisiana Ice Manufacturers' Association.

Reflecting upon the benefits the ice association

W. W. Campbell, Shreveport, La., for several years one of the Southern association's most loyal supporters. He was elected vice-president of the national association in October. This shows him as snapped by The Ice Cream Review's cameraman at the New Orleans convention last year.

done that industry. A. Kent of Kentwood, La., decided that was time to take similar steps for the guarding of the cream industry. Kent accordingly proceeded to introduce other manufacturers of Louisiana in a scheme.

He enlisted the operation of T. Alston of the Blount Manufacturing Co. of St. Louis. Mr. Alston furnished the Kentwood man with a list of ice cream manufacturers and then operated with him, getting them together.

Kent Was Founder

So it was "Charlie" Kent came the founder, first president of the Southern Association

of Ice Cream Manufacturers, a body destined to become next to the largest in the industry, eclipsed only by the national association.

Mr. Kent entered the ice cream industry in the year 1911, and "at an early stage of the game discovered it was a cut-throat, devil-take-the-hindmost sort of business," to use his own words.

He conceived the plan of organizing the manufacturers of Louisiana, Mississippi and Alabama. He submitted his plan to his friend, Mr. Alston, who happened to be visiting him. Mr. Alston saw the advantages and proffered his assistance. A letter was addressed to each of the manufacturers. Nearly all replied, expressing approval of the suggestion.

Mr. Kent then visited the manufacturers of Louisiana

Seven charter members of the Southern association: N. C. Pearson, Gabe Wegener, Jim Nelson, Chris Hollinger, E. C. Harris, C. A. Kent and Harry Benners.

The PURITY Mixer and Pasteurizer is furnished with either belt or motor drive as specified.

Two Sets of Agitators

Of a specially designed propellor type, produce a *perfect mix* in the PURITY Ice Cream Mixer.

It will improve your ice cream and increase your profits.

A special current deflector throws the mixture constantly toward the center, where the propellor sucks it down in little whirlpools. This makes the PURITY Mixer particularly successful in reconstituting milk from powder or butterfat.

The PURITY may also be used very satisfactorily as a *pasteurizer* in small plants, or for special jobs.

Your plant is not complete without one of these practical, all-purpose machines.

Write *today* for our circular describing them.

Oakes & Burger Co., Inc.

Dept. "D"

Cattaraugus, New York, U. S. A.

The outside jacket of the PURITY Mixer and Pasteurizer is of galvanized iron, lined with sheet copper. Inner can of heavy cold rolled copper, tinned to prevent rust, and reinforced. Agitator of heavily tinned copper and the steel shaft is encased in copper.

Gears entirely enclosed. Thermometer also supplied. The machine is easily cleaned. Furnished in battleship gray enamel.

THAT HOT SPRINGS TRIP IS A BRIGHT FEATURE OF THE SOUTHERN CONVENTION.

The Southern Association Again is "Going to Visit the Boys Over the River."

Orleans. E. R. Harris and Benjamin C. Brown said they would take part in the plan. Mr. Kent then returned to his home, and from Kentwood he sent out letters calling a meeting to be held at the De Soto Hotel, New Orleans. Those present were: E. R. Harris and Benjamin C. Brown, New Orleans; Gabe Wegener and Chris. Hollinger, Chicago; James L. Nelson, St. Louis; A. M. Thornton, Monroe, La.; J. W. Hardy, Jackson, Miss.; N. C. Pearson, Laurel, Miss., and Harry Benners, New Orleans.

Mr. Kent was chosen president, Mr. Thornton vice-president and Mr. Brown secretary-treasurer.

The association struggled along five years without gaining any new members. In 1917 a meeting was held at Birmingham, and Tennessee was taken into the association. This resulted in bringing into the fold such excellent men as W. M. Sidebottom and W. E. Drake of Nashville, Frank Stuart of Knoxville, and several others. Growth from then on was very rapid.

It is a matter of pride to the founders of the Southern association that rebates and other unfair methods of competition have been eliminated since the organization of the association. Quality has been raised to the highest standard and the industry is growing.

Past Conventions.

After the organization meeting in New Orleans in 1912, the association met in that city four consecutive times. Then Birmingham was visited. The following year found the association the guests of the Tennessee manufacturers at Nashville, where the Dixie Flyers were organized. J. W. Mulligan, Rex Extract Co., was the first president of the Flyers; Adolph Skinner, Creamery Package Co., was the first vice-president, and P. N. Miller, Jr., Crown Fruit & Extract Co., was the first secretary-treasurer, a post he has held since, except for the term he served as president, in 1920-21.

Tennessee liked the association so well that Memphis asked for the next convention and got it. The 1920 convention was held at Macon, Ga., with A. M. Thornton as convention president. Little Rock asked for the 1921 convention and the members voted to go to Little Rock. Some time after this convention, The Association of Ice Cream Supplymen decided to hold a regional exposition in Atlanta. The directors were prevailed upon to change their original plans for going to Little Rock in order to meet in connection with the supplymen's exposition.

In Atlanta the members felt that it was time again to visit "the boys over the river," and last December the association went home again, meeting at New Orleans. At the New Orleans convention several cities competed with Little Rock for the honor of being host

in 1923. Little Rock had to beat down opposition from Lexington, Ky., and Birmingham to win.

Past Presidents.

The good work of the Southern association can largely be attributed to the excellent officers it has had. J. Walter Clopton of Decatur, Ala., is regarded as one of the ice cream industry's greatest and most aggressive association secretaries. He has been the secretary of the Southern for four years, succeeding A. M. Thornton. It is significant that Mr. Clopton's term of office dates from the time the association began its growth.

Among those who have been president of the association from time to time are: Benjamin C. Brown, New Orleans; E. R. Harris, New Orleans; W. W. Campbell, Shreveport; C. A. Kent, Kentwood, La.; A. M. Thornton, Shreveport; W. M. Sidebottom, Nashville, and M. Costa, Athens, Ga.

A pleasing feature of the New Orleans convention last year was the fact that every one of the chairman members were on hand for the convention except J. W. Hardy of Jackson, Miss. A photo of the group was snapped at the time by The Ice Cream Review's cameraman.

To these men, no doubt, it means little as to whether the 1924 convention will be held; they are satisfied that their work has been done to good purpose and wherever the conventions are held more good work is sure to result.

MEMPHIS TO ENTERTAIN SOUTHERN DELEGATES BETWEEN TRAINS.

Plans for the entertainment of Southern convention delegates who go to Little Rock by way of Memphis were announced November 15 by S. S. Dent, manager of Fortune's, Inc., Memphis. Between trains the delegates will be shown a sample of Memphis hospitality. The program drawn up by Mr. Dent and other Memphians provides for inspection of the Clover Farm Company's new dairy and ice cream plant in the forenoon, lunch at Fortune's, Inc., at 1 o'clock in the afternoon followed by a drive through the city, winding up at the office of the Lilly-Purity Ice Cream Co. where visitors will have an opportunity to discuss general conditions with one of the oldest manufacturers in the industry. Smokes will be furnished.

NEW YORK
41 Park Row

An Invitation from Hot Springs to Southern Ice Cream Mfr.

Delegates are Assured of Royal Welcome by Publicity Department Business Men's League,
Hot Springs National Park, Arkansas.

THE purpose of this article is to create a more or less acute attack of "wanderlust" among the busy ice cream manufacturers, who think their business would melt if they took a few days' vacation and loafed at "The Nation's Health Resort," Hot Springs National Park, Arkansas, following the conference of the Southern Association of Ice Cream Manufacturers at Little Rock.

Hospitality is the keynote at Hot Springs and a most cordial invitation is extended to you. The feast will all be prepared—Hot Springs will be ready. The doors of the city will be removed from their hinges. Among some of the features of entertainment provided will be a trip through the government controlled bath houses, a drive over the fifteen miles of federal mountain drive-ways, a game of golf on the South's most expensive and most beautiful golf course, and many attractive features which the committee on arrangements is holding as a surprise.

Hot Springs is the best equipped town of its size in the world for handling conventions. In fact, its resources will challenge any city boasting of conventional advantages and will vie with it for honors! Hot Springs

Bathhouse Row, Hot Springs.

entertained 45 conventions last year. No less than 200,000 people pass through its portals each year. Over 700,000 baths are given annually in its radio-active waters. The hotels have a combined capacity of 25,000 guests at any one time. The hotels range from the most spacious which can comfortably care for 1,000 guests to the less pretentious places with a capacity of a dozen or less. There is a place for everybody and at a price to suit each purse.

Hot Springs—the city—is accessible, reached by excellent railroad service on both the Missouri Pacific and Rock Island lines and pointed out as one of the features of three national highways, the Herbert Pike, Lee and the Bankhead. Hot Springs lies just a little south of the center of population of the United States.

The little city is nestled in the scenic valley of the pine-covered Ozark Mountains. Unlike most cities which are laid out symmetrically in blocks, the streets of the resort wind in and out, and fit

Use

Baird Refrigerator Bodies

With Mechanically Refrigerated Cabinets!

WHEN you consider mechanically refrigerated cabinets, remember that every BAIRD REFRIGERATOR BODY, old or new, can be easily and inexpensively adapted for use with them. The insulated compartments now used for ice and salt will be adapted to contain ice cream under refrigeration. Thus the ice cream capacity of the body will be more than doubled.

This alteration is readily accomplished because BAIRD construction has been sturdy and durable and BAIRD insulation has been scientifically correct—always. The thorough waterproofing of every piece of wood and insulation with an odorless waterproofing compound absolutely prevents the absorption of moisture. Being perfectly dry, the insulation is always 100% efficient, the body remains light in weight, and decay cannot take place.

Let us submit data and prices on new BAIRD REFRIGERATOR BODIES for delivering to mechanically refrigerated cabinets and upon the adjustment of your present equipment to your new requirements. The moderate cost, increased ice cream capacity, and economies in delivery will surprise you.

Iowans Ready For Convention

Mason City to be Scene of Annual Gathering December 10, 11 and 12.
Poodle Dogs Have Nice Entertainment Program

IOWA manufacturers will gather at Hotel Hanford, Mason City, Ia., December 10, 11 and 12, for the annual convention of the Association of Ice Cream Manufacturers of Iowa. Preparations have been made to make this one of the most profitable conventions yet held in the Iowa ice cream industry, association officers say.

Plenty of good business subjects and an equal amount of entertainment are in store for the delegates, according to the convention program.

The cost of furnishing packing service to dealers will be discussed. Other subjects are: "Cost of Delivering Ice Cream to Country Dealers," "Methods of Reducing Power Costs," and a talk on "Industrial Iowa." The secretary explains that the purpose of the last named subject is to familiarize Iowa manufacturers with the importance of their state as an industrial state.

E. Elmo Martin of Cleveland will deliver two speeches: "Confidence in Business" and "Just Business."

Local manufacturers will give a smoker on Monday evening of the convention. The members of the Poodle Dog Association will provide the annual banquet, with entertainment, the following evening. The sugar factory at Mason City will be inspected the next afternoon.

An impressive feature of the program will be a memorial service for former President Brewer.

Members of the Poodle Dog Association are earnestly at work in the interest of the convention's success, President J. E. Enright, Chicago, says. Secretary A. G. Rose, Des Moines, says all preparations are being made for the enjoyment of visitors.

The Iowa association has a long record of successful conventions. Visitors in the past have been impressed with the spirit shown at these affairs. This spirit will be just as much in evidence as ever, according to reports to the officials. Members are looking forward to the convention with much eagerness, these reports indicate.

The Convention City.

The continuous enterprise of the citizens of Mason City has caused that city to develop during the past thirty or forty years to one of the most widely known industrial cities of Iowa. For forty years Mason City enjoyed a steady and rapid growth until today it is truthfully spoken of as the fastest growing city in Iowa. In 1890, the population was 4,007 and in 1900, it was

6,746; in 1910, it had grown to a city of 11,230 and the Federal census of 1920, showed 20,065. The population today is 23,000.

Mason City was first settled by a white man in 1854 and the first post office established here in 1857; it was in 1858, that the city became the county seat of Cerro Gordo County, although it was not incorporated as a town until 1870 and a city of the second class in 1881.

Mason City is situated at the confluence of Lincoln and Willow Creeks in the north central part of Iowa, 365 miles from Chicago, 150 miles from St. Paul and Minneapolis, 121 miles from Des Moines and 208 miles from Omaha. It has the commission form of government and has its own municipally owned waterworks with a daily capacity of 6,000,000 gallons, all the water flowing from deep wells. The city owns a system of beautiful parks and playgrounds, all of which are connected by a new network of paved streets reaching every part of the city, there being 64 miles of paving within the corporate limits. This earns for Mason City the reputation of being the best paved city in the state.

In 1869 and 1870 the first railroads came to the city and today Mason City is one of Iowa's railroad centers and is admirably served by the Chicago & North Western Railway, the Chicago & Milwaukee, the Chicago & Rock Island & Pacific, the Minneapolis & St. Louis, and the Mason City & Clear Lake Railway, the latter being an interurban line operating between Mason City and Clear Lake. All these roads offer excellent transportation and shipping service to the jobber and the manufacturer. The railroads have, from the very beginning, been an important factor, as they are in every city, in the rapid and substantial growth of this metropolis of Northern Iowa. Mason City ranks first among all the cities of Iowa in tonnage handled, in and out, by its railroads. During the year 1922, the railroads handled 62,650 carloads of freight to take care of the business at Mason City; of this number 29,343 cars were in-bound and 33,307 cars were out-bound.

Big Dairy Center.

All roads lead to Mason City, and those who find their way to this metropolis in Northern Iowa will be pleased, indeed, with their visit to this hospitable city. Geographically Mason City is the center of the dairy territory of the United States and Cerro Gordo County.

Only 5 minutes

from Filters to Barrels

It's a radical departure—undoubtedly the greatest step forward in the history of Gelatine production. Just think of it—only 5 minutes to accomplish what formerly required from sixteen to forty-eight hours. And you know how important the element of time is in the production of any food product. Gelatine liquors, being exceptionally sensitive, rapidly deteriorate when held for any length of time at the temperature required for drying. Consequently, practically eliminating time in manufacture assures the user of Gelatine a product of unparalleled uniformity in purity.

This great contribution to the gelatine producing art is a result of years of untiring effort put forth by our scientists and engineers who are recognized as leading authorities throughout the industry. By one revolution of the big Drying Wheel pictured above, the liquid gelatine, directly from the filters, is transformed into flake gelatine and deposited into containers.

The same zeal that so closely guards sanitation in the production

Ucopco Wheel

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

DRYING WHEEL

ion of WHEEL DRIED Gelatine also extends to the selection of the raw materials from which it is made. You cannot imagine—much less produce—a better, purer, more wholesome gelatine than UCOPCO. And yet it costs no more than ordinary gelatine.

No user of gelatine—large or small—who is seriously endeavoring to make his product the best possible can afford to ignore UCOPCO—the super-gelatine. Orders can be placed with the nearest branch listed below. Stocks are carried at points convenient to you.

You can improve your product by the use of UCOPCO without additional cost.

THREE BIG REASONS FOR ATTENDING SOUTHERN CONVENTION

For, The Ice Cream Review:

I am going to the Southern ice cream manufacturers convention, in Little Rock next month because:

First: At these conventions I hear talks on the ice cream business which reflects the latest known facts gathered from scientific research and practical experience. I am, therefore, better prepared to deal with and discuss problems related directly to my business by attending the conventions.

Second: At these conventions I meet dealers, supply representatives and men who bring to me the news of the latest accomplishments of other men engaged in the same business as myself. From personal contact with these men I learn the new "kinks" they are applying to their business, exchange ideas with them. They tell me what we have tried and found successful and we

in turn learn of their experiences. I always return prepared to adopt or abandon some idea we have held, which alone makes, or saves us money, sometimes the expense of the trip.

Third: At these conventions I meet and mingle with other men engaged in the ice cream manufacturing business. I meet them away from the routine of their business life and enjoy their friendship. I have established many intimate friendships at these conventions among men whom I would not have met and known had I remained away. I have learned to value this feature of the conventions as an opportunity to renew these friendships and make new ones.

The above briefly expresses the principal reasons why I am going to the southern ice cream convention in Little Rock next month.

Sincerely,

CHAS. HOOBERRY,

Pine Bluff, Ark.

New York Manufacturers Meet at Rochester this Month

Officials Report Everything in Readiness for a
Stirring Convention

THE Association of Ice Cream Manufacturers of New York will hold its annual convention at Rochester, N. Y., December 5 and 6. Preparations are complete for one of the best conventions on record, officials say.

Secretary A. M. Le Messurier of Syracuse, reports indications of a large attendance. He says important subjects will be discussed. Arrangements to make this convention "a complete success" have been handled by the Rochester committee, composed of members and associate members.

This will be the sixteenth annual convention of the association. Particular interest centers upon the event since the president of the New York association, will receive the congratulations of his members upon being elected president of the National Association of Ice Cream Manufacturers.

The convention will be held in one of the Empire State's best convention cities.

Rochester, the county seat of Monroe county, is a beautiful, clean, healthy city on the Genesee river and Lake Ontario and surrounded on three sides by a country of valleys, uplands, lakes and hills, every mile a scene which charms and delights. The roads are excellent. Thriving, prosperous villages and smaller cities are with-

in easy motoring distance and provide excellent for the autoist or traveler.

An Industrial Center.

Rochester, situated in Western New York, on Barge Canal, and on the shore of Lake Ontario, has access to the iron ores of the province of Ontario for manufacturing, the pyrites of Ontario for chemical, the Canadian lumber and pulpwood. It is situated halfway between the eastern and western producing of the United States, thus requiring no unusually long hauls; hence raw materials can be reasonably brought to us. Rochester is located in the center of the great fruit and vegetable producing territory in the United States.

Quality Products.

The Rochester slogan, "Rochester Made Means Quality," reveals the purpose of industrial Rochester. Quality is the keynote and to keep the quality up is the constant admonition. Good wages, fine factories, splendid living conditions are all essential to the needs of quality workers. Rochester has these. It takes quality conditions and quality workers to produce quality products. For generations Rochester has been making good on its slogan, "Rochester Made Means Quality."

Manufacturers of Pacific States to Meet in Canada

Vancouver, B. C., to be Scene of Annual Convention—Splendid Program—Golf Features—
Large Attendance Expected

THAT paradise of red-blooded sportsmen, Vancouver, B. C., will be the scene of the 1923 annual convention of the Pacific Ice Cream Manufacturers Association, to be held December 3, 4 and 5. Hotel Vancouver will be convention headquarters.

This will be the first time the Canadian members of the association have had the opportunity of entertaining their neighbors in convention. They have provided sports for the visitors. The opening of the convention will be preceded by golf game matches, the first of a series to be held Sunday, December 2. Delegates interested in the ancient and royal Scottish pastime have been notified to be on hand a day before the opening of the convention.

Plans for the convention are well in hand, according to W. V. S. Robb, Seattle, president of the association, and A. F. Bird, Seattle, treasurer. They recently made a trip to Vancouver to confer with A. R. Hoy, a director and head of the Vancouver local committee on preparations. They assure members that "nothing" has been neglected to make your stay in British Columbia thoroughly enjoyable. An interesting program has been worked out by Secretary Walker, Tacoma, Wash. as was noted by readers of the preceding issue of the Ice Cream Review, in which the program was first published. It appears elsewhere in this issue.

Secretary Walker has issued a call for his forces to rally in full strength at the convention city this month.

"The national and international conventions have passed into history, but we will hear much about them from men who attended and have consented to take part in our program," he says. "The program is made up

of most interesting subjects to be presented by capable speakers."

The convention will open Monday, December 3, with a luncheon to be given by the association to the members and their ladies. Monday evening will find the sportsmen in charge of things, who have invited all members and their friends to be their guests.

The local committee will have charge of affairs Tuesday evening. It will be devoted to informal parties, with no set program, visiting friends in the city. It will be a general "get acquainted" occasion.

The officers are: W. V. S. Robb, president, Seattle, Wash.; G. W. Weatherley, 1st vice-president, Portland, Ore.; D. M. Dorman, 2nd vice-president, Los Angeles, Cal.; A. F. Bird, 3rd vice-president and treasurer, Seattle, Wash.; Bert H. Walker, Secretary, Tacoma, Wash.; Jay H. Kugler, field secretary, San Francisco, Cal.

The directors are: W. V. S. Robb, Seattle, Wash.; W. Weatherley, Portland; F. N. Martin, Spokane, Wash.; J. E. Dunne, Portland, Ore.; A. F. Bird, Seattle, Wash.; G. S. Helphrey, Sand Point, Ida.; A. R. Hoy, Vancouver, B. C.; V. A. Sampson, Billings, Mont.; S. J. Simons, Yakima, Wash.; F. B. Flood, Spokane, Wash.; D. M. Dorman, Los Angeles, Cal.; Bert H. Walker, Tacoma.

The Convention City.

Vancouver is located on Burrard Inlet, an arm of the Straits of Georgia. It was incorporated in 1886, but was almost completely destroyed by fire in the same year. It is the fourth largest city in Canada and is its chief Pacific port. Its population is 220,000.

SALESMEN'S CLUB ELECTS NEW OFFICERS.

The salesmen's Club of the Association of Ice Cream Supply Men held its annual election of officers at an annual dinner in the Hollenden Hotel, Cleveland, the evening of October 26th.

Some 120 salesmen, representing roughly fifty member companies of the association were present when President Thomas J. Stewart opened the business session.

N. M. THOMAS.

Reports by President Stewart, Roberts Everett, secretary of the club, M. Conaton, Jr., chairman of the club's Cleveland entertainment committee; Elmer Mack and J. W. Mulligan, regional representatives of the club, were heard. President Jordan of The Association of Ice Cream Supply Men briefly informed the members of the parent organization's appreciation of their work for the industry.

The address of the evening was given by Charles Newcomb, on "Some Psychological Aspects of Selling."

The directors were chosen from a large group of nominees reported by a nominating committee appointed by President Stewart. They are: Frank Carroll, Millington Higgins Gelatine Co.; Byron Morris, Creamery Package Mfg. Co.; J. E. Simpson, Elyria Enamelled Products Co.; Herman Lapat, Cone Company of America; Eli Rosenbaum, David Michael and Co.; I. E. Colquhoun, Pfandler Co.; M. C. Swarthout, G. R. Ryan Mfg. Co.,

Following the general meeting the directors met and elected N. M. Thomas, president, Michael Conaton, Jr., vice-president and C. H. Achelpohl, treasurer.

BUCK UP!

"You're sick of the game!" Well, now that's a shame, you're young and you're brave and you're bright. You've had a raw deal!" I know, but don't squeal, buck up, do your damndest, and fight. You're plugging away that will win you the day, you won't be a piker, old pard! Draw on your grit; it's so easy to quit; you're keeping-your-chin-up that's hard.

Answers to Inquiries

Dear Sir:—Will you please advise me what you consider the very best ice cream formula of a thousand pound weight, composed of the following ingredients: sweet butter, 4% milk, Merrell-Soule powdered milk, United Chemical and Organic Products Co. 6X gelatine, C. W. brand vanilla, Washburn's improver. In other words, if you were manufacturing an ice cream with the above or other ingredients we can obtain here in Arkansas and wanted to make the very best piece of goods you could, exactly what proportions and what method would you use of the above ingredients in order to make the very highest quality ice cream, how long would you age it, at what temperature would you freeze it, and what overrun would you obtain? Also, how high would you pasteurize it, and at what temperature would you emulsify it? I am using a De Laval emulsor, 200-gallon size.

Reply: You will notice that in table 1 I have used both sweetened condensed milk and skim milk powder, while in the second I am making up the serum solids with skim milk powder alone. I am presuming that you have a sufficient supply of whole milk to make up both of these mixes at all times.

Table 1.
1000 lb. Mix.

Ingredients	Fat	Serum Sol.	Total Sol.
96.0 lbs. sugar	91.2
5.0 lbs. gelatine	4.7
110.0 lbs. sweet cond.	29.7	73.7
25.0 lbs. skim milk powder.	23.7	23.7
87.0 lbs. 84% butter	73.0	73.0
677.0 lbs. 4% milk	27.0	57.9	84.9
vanilla and improver.			
1000.0	100.0	111.3	351.2
Per cent	10.0	111.3	351.2

Table 2.
1000 lb. Mix.

Ingredients	Fat	Serum Sol.	Total Sol.
140.0 lbs. sugar	133.0
5.0 lbs. gelatine	4.7
50.0 lbs. skim milk powder.	47.5	47.5
85.0 lbs. 84% butter	71.4	71.4
720.0 lbs. 4% milk	28.8	61.5	90.3
vanilla and improver			
1000.0	100.2	109.0	346.9
	10.02	10.9	34.69

Both of these mixes should make it possible to secure the overrun of 15 per cent. The temperature of pasteurizing should be 145 degrees and held for 30 minutes. This mix should then be emulsified at a temperature not less than at 135 degrees. It is not necessary to cool to 135 but start emulsifying at 145 and it is possible you may have to warm the mix so as not to have it go below 135. If possible, I would use both the sweetened condensed milk and the skim milk powder, although in an emergency it would do to use either alone. I think it is preferable to use some condensed, however, so as not

to get too much of the milk powder flavor in these cases the powder is not absolutely fresh and sweet.

After emulsifying, the mix should be cooled down to 40 degrees and held at least 24 hours, preferably 48 hours, before freezing, and introduced to the freezer at a temperature not over 45 degrees and frozen in a freezer in from ten to twelve minutes. It is, of course, impossible to state in a letter just exactly how to follow out the process in a general way, as the kind of equipment in any particular factory varies and the speed of the freezer varies. The operator will have to watch things closely and see just how to go ahead with the processes in order to get best results.

Dear Sir:—Will you kindly give me directions for testing ice cream for butterfat?

Reply: I suggest that you try a modified mixture in which you make a mixture of glacial acetic acid and sulphuric acid is used. The method is as follows: First weigh nine grams of cream into a test bottle in the usual manner. Second, mix ten c.c. of glacial and sulphuric acid. Pound the sulphuric acid into the glacial acid then immediately add the mixture of acids to the test bottle.

You will find that mixing the two acids produces an instantaneous heat but if you work fast you can use your bare hands in the solution.

It is possible you can secure the glacial acetic acid from your local drug store. You want to be sure, however, that it is pure glacial acid, as some week-old glacial acid will not do.

Dear Sir:—We are having trouble with a separation while the ice cream hardens in the room, especially in the brick slabs.

We handle same as follows, for 100 pound mix: 8 gal. 4% milk, 12 lbs. sugar, 4 lbs. powdered milk, 10 lbs. butter, 10 lbs. condensed milk, 7 oz. gelatine.

The whole mix is pasteurized at 145 degrees F., run through viscolizer at 2400 lbs. pressure and held in holding vat for 24 to 40 hours at about 40 degrees and froze in a brine freezer (Tycos) and hardened in a hardening room at zero temperature. At times it hardens right and then again it separates at bottom of press which makes it too solid and the top like snow.

Reply: I have your letter of recent date, stating that you are having some trouble in the proper hardening of the ice cream, stating that your cream seems to separate especially when making bricks.

I have analyzed your formula, which you will find below in Table No. 1, and I can see nothing particularly wrong with your manner of freezing, nor is there anything wrong with the pasteurizing or viscolizing of the mix and the subsequent holding.

I imagine your trouble is due to the slow hardening

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

How About Your Gelatine?

That is one thing you want to be sure about. Unseen, untasted it is all important. It has to be good. Always! You have to depend on it.

Use Atlantic super-clarified gelatine!

Raw materials used in its manufacture are carefully selected—finer than is ordinarily used in gelatines. The process of making calls for the utmost care in transforming these raw materials into gelatine. The result is a uniformly high grade gelatine of unparalleled purity, viscosity and clearness—a brand upon which you can depend.

The test tube at the left contains Atlantic Super-Clarified Gelatine. Note its clarity—its high viscosity.

**"Purest and Best—
It Stands the Test"**

A Free Test

Make the test of trying out our gelatine by ordering a barrel from the nearest office. Use five or fifteen pounds and if it doesn't match up with our claims for it, send the unused portion back. We will pay the freight both ways.

Atlantic Gelatine Company
WOBURN, MASSACHUSETTS

Branches:

Chicago: Suite 510, 118 N. LaSalle Street
New York City: Room 1081 Woolworth Building

ATLANTIC ^{Super-Clarified} GELATINE

of your cream in your hardening room. It is possible that your room is considerable above zero when you have the trouble relative to the separation of the cream. I suggest that you try to run it a little lower temperature at certain times of the day when you go into this room quite often. It is also possible that you are drawing the ice cream from the freezer at the right time.

I might suggest that you try to freeze just a little longer and draw it when the cream is frozen a little bit stiffer. When putting cream from the freezer directly into the brick slabs. The slabs should be put into the ordinary room just as soon as possible, as there is considerable surface exposed and the ice cream will soften considerably if not put into the hardening room promptly.

Ingredients	Fat	Serum Sol.	Total Sol.
12.0 lbs. sugar.....	11.40
68.8 lbs. 4% milk.....	2.75	5.88	8.63
4.0 lbs. skim powder.....	3.80	3.80
10.0 lbs. evap. milk.....	.8	1.8	2.60
10.0 lbs. butter.....	8.40	8.40
.5 lb. gelatine.....47
105.3	11.95	11.48	35.30
Per cent	11.36	10.9	33.6

* * *

Dear Sir:—We wish to make something a little better than the average. Can you suggest a good formula that will contain about 12 per cent butterfat made from 16 per cent cream, condensed milk, 4 per cent milk, gelatine, sugar and vanilla?

Reply: I am indicating below in Table 1 how you could make up your ice cream mix from the ingredients given in your letter.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar.....	13.0
.5 lbs. gelatine.....
10.0 lbs. condensed.....	3.0	3.0
75.5 lbs. 10% cream.....	12.08	5.67	17.7
100.0	12.08	8.67	34.4

You will notice, however, that the formula does not include any 4 per cent milk as the amount of 16 per cent cream will just furnish enough butterfat when luting the cream with milk.

If you have any further questions about the formula after you have tried it out I shall be glad to have you write.

* * *

Dear Sir:—Do you know of any simple method of testing the acidity of ice cream mix? I have tried the regular methods used in ascertaining milk acidity and they do not work at all.

Also can you tell me how to find the total solids in a mix, by testing? I can figure what they should be what I want, and want to be able to actually test a mix to find out whether I have what I plan in the mix.

Reply: If you will tell me just how you made the acid or what difficulty you had, I shall be glad to explain this to you in detail, as the determination of acidity in ice cream mix is the same as for determining acidity in cream and you should have no difficulty in connection with this test.

The total solids of an ice cream mix means the total dry matter and you can determine the total solids by means of the regular butter moisture test equipment. You would weigh ten grams of ice cream into the aluminum dish, drive off the moisture by slow drying in a butter moisture oven and then re-weigh on the butter moisture scale, re-placing the ten gram weight by a five gram weight and then returning the beam on the scale for per cent moisture. The difference in the two weights represents 50 per cent moisture as you would to the regular reading on the scale.

You have, undoubtedly, also heard of the Mojonnier tester, which is used by practically all the ice cream factories for the determination of total solids.

* * *

Dear Sir:—Please figure the following formula for me, 100 pound mix, total solids 30 to 35. We are using 35 pounds of sugar to 25 gallons of mix:

8% Butterfat.—Ingredients: 20% sweet cream, 4% whole milk, skim milk powder, water, gelatine, sugar, vanilla flavor.

10% Butterfat.—Ingredients: 20% whole milk, 4% whole milk, skim milk powder, water, gelatine, sugar, vanilla flavor.

Reply: I am glad to suggest below, in Tables 1 and 2, my ideas relative to the proper mix. You will notice that in both mixes I have left out the water, as it is not necessary to use water in making up these mixes. The granular gelatine can be mixed with sugar and introduced into the mix in this manner. The best time to introduce this sugar and gelatine is just before the mix

Nothing boosts winter sales better than the packaged Sundae—

Many ice cream manufacturers turn the usual winter-slow-down months into a profit making period. They make and market packaged sundaes. Any ice cream manufacturer can win new and added business by simply producing this little sales winner. No great outlay required for additional equipment. No trouble in selling your output — dealers who do not now sell your product will quickly handle the packaged sundae. We'll gladly give you full information regarding the packaged sundae idea, also about the

KLEEN KUP

the most practical packaged sundae container. Made of snow white spruce-wood-fiber. Free from objectionable wax. Large opening makes easy filling and removal of contents. Self-sealing lid. Nest when empty — take little storage space. The Mono Paper Spoon is part of the package. Samples and prices along with full information is yours for the asking.

MONO SERVICE CO., NEWARK, N. J.

MENTION "THE REVIEW"—IT IDENTIFIES YOU.

is brought to the pasteurizing temperature or at about 130 or 140 degrees.

I have also left out the vanilla from the 100 pound mix, as this is such a small item.

If these suggestions are not what you want, I shall be glad to have you write again.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar.....	13.30

100.0	10.06	9.98	33.81

* * *

Dear Sir:—The cream supply here (Blackpool, Eng.) is very unreliable and the milk powder with the best reputation is made by the Maypole Dairy Co. and is advertised as a full cream milk powder. As near as I can tell the milk supplied over here runs about 3½ per cent B. F.

It is the intention to make a good commercial ice cream from milk, milk powder and butter, using the Maypole brand of milk powder, and running about 10 per cent B. F. and figuring 100 per cent overrun. As I am in possession of your writings on this subject I can

get the above formula from them, but what I really need is the formula for the best ice cream it is possible to make using the above ingredients as a base. This is required for banquets and expense does not figure.

Reply: I note what you say relative to the manufacture of a very high class of ice cream, and that you will be required to use butter and milk powder to make up your ice cream.

I suggest that you get from the Maypole Dairy Co. a statement relative to the amount of butterfat contained in the powder. I presume that if you can get this powder in a very fresh condition, you will not have any bad rancid flavors in your ice cream due to the powder.

Our experience here in America has been that whole milk powder will not keep long enough so that our factories can purchase it in quantities. A milk powder made from skim milk serves the same purpose when used in connection with butterfat, keeps much better and the butterfat, in a manner, will cost considerably less. The butterfat in a whole milk powder must necessarily be expensive.

I am glad to suggest below in table one and two, formulas which you might use for making up special banquet cream. One of them you will notice will test nearly 17 per cent fat and the other about 13 per cent fat.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar.....	13.30
.5 lbs. gelatine.....47
3.0 lbs. milk powder.....	0.3	2.55	2.85
17.0 lbs. 84% butter.....	14.28	14.28
65.5 lbs. 3½% milk.....	2.28	5.62	7.90
100.0	16.86	8.17	33.80

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar.....	13.30
.5 lbs. gelatine.....47
4.0 lbs. milk powder.....	.40	3.40	3.80
12.0 lbs. butter.....	10.08	10.08
69.5 lbs. 3½% milk.....	2.43	5.97	8.40
100.0	12.91	9.37	36.05

For your ordinary 10 per cent fat mix you could use the formula given on page 22 in the "Ice Cream Mix" booklet. (I am inclosing the page of the booklet giving this formula.) All you would need to do would be to substitute your milk powder in place of the skim milk powder which would provide the butterfat which you would have less in your 3½ per cent milk. This will give a product of approximately 34 per cent total solids and should meet the demands of your most exacting trade.

* * *

Dear Sir:—I am enclosing freezer report showing the formula that I am using and the results we are getting. I would like real criticism, as I am very anxious to improve my product in any way that I can. I do not care to run more than 8 per cent fat but I am of the opinion that I might increase my total solids just a little. What about this?

We show that this mix runs 8.12 fat and 33.66 total solids. Is this correct?

Do you consider the solids in fruit? You will notice we used two gallons of strawberries in this mix that we did not take in consideration, either in total weight or solids. Strawberries are Crown Point & Ext. Co. standard pack in cans.

We pasteurize and viscolize at pressure of 2000 lbs. Is this high enough?

that shows different ingredients used in ice cream as regards content of fats, serum solids and total solids?

Is there any regular rule by which we can determine the amount of serum solids in any given percentage of milk and cream. Can a correct test for butterfat in ice cream be made with Babcock test?

Freezer Report.

Pounds mix, 1000; gallons mix, 111; gallons ice cream, 224; average test, 100 per cent. Total gallons, 224. Time mixed, 4-9; time run, 2½ hours; age when frozen, 18 hours; time start freezing, 8:30 a. m. 4/10; finished, 11 a. m. Raw material used: Cream, 120 lbs. 45%; milk, 680 lbs. .04%; S. S., 54 lbs. skim milk powder; sugar, 140 lbs.; gelatine, 6 lbs.; flavor, 8 ozs. Total, 1000 pounds. Fruit, 2 gals. strawberries. Remarks: Fat, 8.12; S. N. E., 25.54. Total solids, 33.66.

Reply: I have checked over your ice cream mix as given on your freezer report and you will find the calculation given below in Table 1. Your percentage figures out as you will see, except that your total solids is just a little higher. I hardly believe you would want to increase the milk serum solids as you already have 11½ per cent. I believe you would find that if you increase this to 12 per cent or better you will be troubled with sandy ice cream, especially if you were to hold in the hardening room for five days. The addition of fruits like the two gallons of strawberries, would make no material difference in the solids except that it might raise the solids of your strawberry cream just a little. It is possible that the strawberries you buy would have a solids content of 55 or 60 per cent.

Table 1.			
Ingredients	Fat	Serum Sol.	Total
120.0 lbs. 45% cream.....	54.0	5.88	59.88
680.0 lbs. 4% milk.....	27.2	58.12	85.32
54.0 lbs. skimmed powder.....	51.30	51.30
140.0 lbs. sugar.....	133.00
6.0 lbs. gelatine.....	5.70
1000.0	81.2	115.30	335.50
Per cent	8.12	11.53	33.65
Per cent sugar.....	14.0

I am glad to advise you that the Olsen Publishing Milwaukee, Wisconsin, is now making a revision of the little booklet entitled, "Ice Cream Mix." You undoubtedly have a copy of the first edition. This revision will have the information relative to the fat content, serum solids and total solids of various ingredients. It will also show clearly my method of calculating serum solids and total solids in any kind of mix.

I have been using a general average factor of 8.9 per cent to determine the serum solids in milk serum. To illustrate, suppose you used 100 pounds of 40 per cent cream and 400 pounds of 4 per cent milk. The cream and milk would then furnish 40 and 12 pounds of fat respectively. The total fat would be 52 pounds. Total pounds of milk and cream would be 500 pounds. Subtracting 52 from 500 would leave 448 pounds of milk serum. Multiplying this 448 by 8.9 per cent gives as result the pounds of serum solids. In a similar manner the serum solids can be figured in skim milk. Skim milk would be 100 per cent serum and to get the solids you simply multiply the pounds of skim milk by 8.9 per cent.

We are repeatedly making tests for butterfat with the Babcock test by a modified method called Sulphuric Glacial Acetic Acid Test. I am enclosing a copy of the method of testing by this sulphuric glacial acetic test. The sulphuric acid used is the regular commercial sulphuric acid, and the acetic acid should be "glacial acetic acid."

You stated in your letter that you wanted your ice cream to be a little smoother. I believe you can accomplish this improvement by care in pasteurizing so as not to heat the mix higher than 145 degrees and possibly viscolize at a little higher pressure. Then if you conveniently age your mix forty-eight hours or two days before freezing, you should not have any difficulty in getting a smooth cream. If, however, you think your cream is not smooth enough after following out the suggestions, you could possibly use a very small amount of improver or some sort of gum.

Relative to our annual short course, we shall, indeed, be very glad to have you attend our short course next winter, which comes during the six weeks period of January 7th to February 16th, and is followed by our annual one week's ice cream makers' conference and educational ice cream scoring contest, which comes February 18th to 23rd.

A Graphical Method for Figuring Complex Ice Cream Mixes

By H. H. SOMMER*

THE ice cream industry has developed rapidly. Only a decade ago the mix was prepared according to recipes and formulas calling for a certain amount of milk, cream, sugar, gelatine and flavoring extract. If any calculations were made at all, it was only to figure for a certain percentage of fat. This is very simple and easy, and for that reason many ice cream makers are loath to take up something more involved.

However, it soon became known that a smoother product could be made and a somewhat higher overrun could be obtained by introducing some condensed milk product to raise the milk serum solids content of the mix. The first tendency was to retain the recipe or formula method and include in the formula a certain amount of condensed milk. Many ice cream makers are using this method today. This method is unsatisfactory in most cases, because it does not take into account properly the variations in the composition of the ingredients that the recipe calls for. There are a large number of different condensed milk products of different composition which we may use in the mix from time to time, either by choice or necessity, and therefore it is difficult to get an ice cream of uniform composition by the "cook book" or recipe method.

The day now is here when all progressive ice cream manufacturers are discarding the "cook book" method and are using exact calculations. The modern manufacturer decides on a certain composition in terms of definite percentages of fat, milk serum solids, sugar, gelatine and flavoring extract, and then proportions the materials to be used each day so as to obtain a mix of this composition. This procedure calls for definite, exact methods of figuring, and because of the fact that we are standardizing for two components, fat and serum solids, the calculations are necessarily somewhat complex.

Many ice cream makers dodge this difficulty by a process of "juggling" the figures until the right combination is found. Others simplify the calculations by getting all their fat in one ingredient such as cream, and using condensed or powdered skimmed milk to furnish the serum solids, and then making up the rest of the weight of the mix by water. Where an adequate

supply of whole milk or skimmed milk are available such a practice must be regarded as criminally wasteful. Skim milk and whole milk are the cheapest sources of serum solids, and where they are available under conditions should water be added to the mix.

In an attempt to furnish a simple method the writer developed the graphical method here described. This method has been used in the classes in ice cream making at the Wisconsin Dairy School with gratifying results.

Three Different Dairy Products Necessary.

In order to standardize an ice cream mix to a certain fat and serum solids content it is necessary to use three different dairy products. If no water is to be used in the mix, then two or all three of the dairy products to be used contain fat, such as cream, plain condensed milk, or whole milk, the calculations by other methods are quite difficult, but a very readily made by the method here described.

The calculation chart used in this method consists of an equilateral triangle with lines ruled parallel to each side as shown in Fig. 1. In using this chart for figuring ice cream mixes each side of the triangle represents one of the dairy products.

Figure 1

for example the three sides might represent cream, milk and condensed milk. The amount of substance is indicated by the line parallel to the side representing the substance. In Figure 2 any point on line AB represents 30 parts of cream; any point on line CD represents 30 parts of milk; and any point on line EF represents 40 parts of condensed milk. The point O where these three lines cross therefore represents a mixture consisting of 30 parts of cream, 30 parts of milk and 40 parts of condensed milk. The sum of these figures is 100; it is 100 in all cases.

In that way, any point on the triangle represents a mixture of three substances. The number of parts of each of the three substances in the mixture is determined by counting the number of lines from the side to the point. Thus point X in Figure 2 represents 7 parts of cream, 10 parts of milk, and 20 parts of condensed milk.

The idea in using this chart is to locate a line on the chart that represents all the mixtures of three dairy products that will have the desired serum solids content, and to locate a second line that represents all the mixtures of

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

the three products that will have the desired fat content. The point where the two lines cross represents the one mixture that will have both the desired fat and the desired serum solids content.

With this brief description of the chart and its use, we shall now take up a sample problem.

Problem:—Figure a 1,000 pound mix to test 12.5 per cent fat, 14 per cent sugar, 10 per cent serum solids, 0.5 per cent gelatine, and 0.0 per cent flavoring extract. Use cream testing 30 per cent fat, milk testing 3.5 per cent fat, and plain condensed milk testing 8 per cent fat and 30 per cent total solids.

Figure 2

Procedure and Sample Calculation.

Step 1. Figure the amounts of all ingredients that can be figured directly.

$$\begin{aligned} 1000 \times 14\% &= 140 \text{ lbs sugar} \\ 1000 \times 0.5\% &= 5 \text{ lbs. gelatine} \\ 1000 \times 0.5\% &= 5 \text{ lbs. flavoring extract.} \end{aligned}$$

Total 150 lbs.

Step 2. Figure the present of fat and of serum solids necessary in the remainder of the mix, so that it may furnish all the fat and serum solids needed in the entire mix.

$$\begin{aligned} 1000 - 150 &= 850 \text{ lbs. remainder of mix.} \\ 1000 \times 12.5\% &= 125 \text{ lbs. of fat needed.} \end{aligned}$$

Therefore the fat test of the 850 pounds will have to be:

$$\frac{125}{850} \times 100 = 14.7\% \text{ (figured to the nearest tenth)}$$

$$1000 \times 10\% = 100 \text{ lbs. of serum solids needed.}$$

Therefore the serum solids test of the 850 pounds will have to be:

$$\frac{100}{850} \times 100 = 11.8\% \text{ (figured to the nearest tenth)}$$

Note:—The calculations given in the above steps need not be repeated each time. If the same composition is desired from day to day, then this need be figured only once. In our problem we know that for every 1000 pounds of mix to be made we need 850 pounds of a mixture of dairy products testing 14.7 per cent fat and 11.8 per cent serum solids. The daily calculations start from this point.

Step 3. List the three dairy products and the composition desired.

	Fat test	S.N.F. test
Cream	30.0	6.2
Milk	3.5	8.5
Plain condensed milk	8.0	22.0
Desired	14.7	11.8

Step 4. On the chart locate the line that represents the possible combinations of the above three substances will test 14.7 per cent fat. This is done by locating points and connecting them with a straight line. The easiest points to figure and locate are the two extremes.

In our case the 14.7 per cent fat mixture could be made from (1) the cream and milk alone, or from (2) the cream and plain condensed milk alone. In between these combinations we have a whole series of combinations of three substances that will test 14.7 per cent fat.

In order to locate the two points on the chart that represent the two above mentioned combinations we must figure out the exact proportions in which these substances must be mixed. Because the chart is on the basis of 100, we shall figure the proportions on the basis of 100.

Figure 3

(1)—Cream and Milk:

$$\begin{aligned} 11.2 \text{ lbs. cream} \\ 15.3 \text{ lbs. milk} \\ 26.5 \text{ lbs. mixture} \end{aligned}$$

For 100 pounds mixture take:

$$11.2 \times \frac{100}{26.5} \text{ or } 42.3 \text{ lbs. cream}$$

$$15.3 \times \frac{100}{26.5} \text{ or } 57.7 \text{ lbs. milk}$$

(2) Cream and Plain Condensed Milk.

$$\begin{aligned} 6.7 \text{ lbs. cream} \\ 15.3 \text{ lbs plain condensed milk} \\ 22.0 \text{ lbs. mixture} \end{aligned}$$

For 100 pounds mixture take:

$$6.7 \times \frac{100}{22.0} \text{ or } 30.5 \text{ lbs. cream}$$

$$15.3 \times \frac{100}{22.0} \text{ or } 69.5 \text{ lbs. plain condensed milk}$$

The method of locating these points is illustrated in Figure 3. Line AC represents 42.3 parts of cream; and line AD represents 57.7 parts of milk. It will be noted that the two lines meet at point A, and that is the point we wish to use.

Line BE represents 30.5 parts of cream and line BF represents 69.5 parts of plain condensed milk. These two lines meet at point B, which is the second point we wish to use to draw our straight line.

Connect points A and B with a straight line, and this

COLUMBUS

CLEVELAND

CINCINNATI

line represents all the combinations that will test 14.7 per cent fat. You can select any point on this line at random, and by reading off the three substances as illustrated under Figure 2 you will have the proportions that will give a mixture testing 14.7 per cent.

Step 5. On the chart locate the line that represents all the possible combinations of the three substances that will test 11.8 per cent serum solids. This is done exactly as in the case of the "fat line."

The two simplest combinations that will give us 11.8 per cent serum solids are (1) plain condensed milk and cream, and (2) plain condensed milk and milk.

(1) Plain Condensed Milk and Cream.

5.6 lbs. plain condensed milk
10.2 lbs. cream
15.8 lbs. mixture

For 100 pounds mixture take:

$100 \times \frac{5.6}{15.8}$ or 35.4 lbs. plain condensed milk

$100 \times \frac{10.2}{15.8}$ or 64.6 lbs. cream

(2) Plain Condensed Milk and Milk.

3.3 lbs. plain condensed milk
10.2 lbs. milk
13.5 lbs. mixture

For 100 pounds mixture take:

$100 \times \frac{3.3}{13.5}$ or 24.4 lbs. plain condensed milk

$100 \times \frac{10.2}{13.5}$ or 75.6 lbs. milk

From these two combinations the points are located as described under step 4. Figure 4 shows both the "fat line" and the "serum solids line."

Step 6. At the point of intersection of the "fat" and the "serum solids line" read off the amount of each of the three ingredients estimating to the nearest tenth. At this stage it is also advisable to check the result.

The reading from the chart when the lines have been correctly located is as follows:

	Fat	Serum Solids
37.0 lbs. cream.....	11.10	6.2
31.0 lbs. plain condensed milk.....	2.48	0
32.0 lbs. milk.....	1.12	2
Total.....	14.70	11.8
Desired.....	14.70	11.8

Condensed Milk
Figure 4

Step 7. Knowing the proportions on the basis of 100 pounds, now figure the exact weight of each of the three dairy products required to make the 850 pounds required in our case.

$$\begin{aligned} 37.0 \times 8.5 &= 314.5 \text{ lbs. cream} \\ 31.0 \times 8.5 &= 263.5 \text{ lbs. plain condensed milk} \\ 32.0 \times 8.5 &= 272.0 \text{ lbs. milk} \\ \hline &850.0 \end{aligned}$$

Step 8. Tabulate the finished mix and check it for serum solids and total solids.

Weight	Ingredient	Fat	Solids Serum	Solids Total
140.0	Sugar	140.0
5.0	Gelatine	5.0
5.0	Flavoring extract	5.0
314.5	Cream 30%	94.35	19.50	113.85
263.5	Plain condensed milk	21.08	57.97	79.05
272.0	Milk 3.5%	9.52	23.12	32.64
1000.0	Total	124.95	100.59	370.00

The above method may seem unusually long to the reader due to the large amount of detailed description of the matter necessary in presenting it, but it can be mastered quite readily so that in a short time anyone can figure a mix in ten to fifteen minutes.

The sample calculation presented above illustrates the principle used. Where sweetened condensed milk is used the procedure is modified slightly. The writer will gladly answer any questions that may arise concerning the application of this method.

HUDSON'S NO. 52 SPECIAL AND WINTER SALES

Hudson's No. 52 Special vanilla flavor is just as appealing to the palate at Christmas time and in winter as in summer.

It has the added advantage of keeping its flavor in storage, and it does not freeze out.

These are important factors to consider in your effort to hold up winter sales volume. Furthermore, the strength of Hudson's No. 52 Special is of vital importance in keeping manufacturing costs down.

Let us ship you a sample keg of No. 52 SPECIAL extract or a sample gallon of Hudson's Concentrated No. 52—Express or freight prepaid to your city. You may return same at our expense if not entirely satisfactory.

Ice Cream Freezers and Ice Cream

By Prof. A. D. Burke *

I WANT to discuss this subject from the standpoint of the buyer; to tell what I expect; what I demand of the freezer which I purchase and why I demand it. Finally, I wish to speak of the defects in ice cream wrongfully attributed to the freezer, in the hope that the reader may be thereby better enabled to help his customers solve their problems.

My experience with freezers covers them all; the vertical,

PROF. A. D. BURKE.

the horizontal, the continuous,—even the old-style tub. Undeniably each type has some claimed advantage or it would never have been invented. However, when I buy, I do not consider one advantage, nor two, nor even three. I want them all or at least as many as can be adequately combined to make that particular freezer stand out in my mind as being unexcelled. I want maximum efficiency coupled with economical use and production. And I hope I may be able to show you why the purchaser needs this freezer,—not simply that he does need it or owes it to your firm to buy.

When I select a freezer I want convenience, and the convenience of a hinged head

is a personal favorite with me. I like the type that swings wide to the side enabling easy removal of dasher and thorough cleaning of the machine. The customary practice of entirely removing a head frequently necessary in both large and small plants and especially in factories doing experimental work, is simply one more step in tedious operation, not to mention increased sloppiness on one's clothes as well as on the floor and the ever attending possibility of dropping and breaking the head. However, the head should be removable in case of necessity.

Then the question of the clutch shift if the freezer be motor driven, or of the belt shift if run from an overhead pulley. In either case an economy of steps, time and money is effected if the shift is operated from the front, where "the man at the helm" can continually keep his eye on the freezing mix.

Such advantages likewise apply to a brine valve and easily readable brine thermometer properly set for efficient use. Too warm brine or brine too cold causes numerous defects in ice cream. We must know when to start our freezer and when to flow or stop our brine if satisfactory results are to be obtained. If you will pardon just a short side step from my topic, I would like to mention that to my mind there is no more important instrument in the realm of dairying than the thermometer. But I must hurry on. I will have more to say about the use of brine and thermometers in the ice cream business a little later.

Again the matter of dashers. No factor can cause more annoyance, more waste of time, money and energy not to mention loss of religion than dashers that stick. I well remember my two experiences which covered the use of two crowbars, a two by four plank and a small sized sledge hammer to remove wedged dashers from the drums of two well known makes of freezers,—yet the dashers had been removed regularly for cleaning purposes. Both experiences occurred with the same type of freezer in which the dasher shaft fitted too snugly in the housing. Beware of the tight fitting dasher.

Another desirable feature is a measuring or weighing batch tank. Overloading or underloading the freezer is the predisposing cause of many defects in ice cream unjustly at-

* Instructor in Oklahoma A. & M. College, Stillwater, Okla. Address prepared for an ice cream supply house's sales conference. It contains much interesting information concerning freezers.

tributed to the machine. Each freezer has an optimum capacity. Overload and you pay the consequence of low capacity, run, churning and many other defects. With a small insulated glass window in the front of the tank or a weight tank, the operator measures his mix and loads the freezer to the proper capacity.

Finally and by no means the least among my list of conveniences is a removable or cleanable freezing cylinder. When necessity demands the use of a salt or ice brine, it is a well defined advantage to be able to clean out the freezer drum. Keeping your freezing mix at an even, uniform temperature through an even and uniform circulation of brine is to be highly approved. Also the fact that the drum can always be kept so by removing or dismantling the dasher and scraping it free from the insulating deposit of scale or sediment is of importance. So much for convenience. Now for a few separate items.

One Easy To Run

I want a freezer that is easy to run, for whether operated by motor or pulley a smooth running freezer, well lubricated is desirable. The easier the operation the less the load of your motor. Ease of operation, therefore:

1. Prevents wear on your freezer.
2. Wear on your whole plant.
3. Helps in decreasing breakage.
4. And is a factor in securing overrun because the mix is uniformly whipped at all times.

There are yet other things to consider.

A short time ago I was called upon to operate a horizontal freezer in which the dashers failed to scrape the ice cream free from the cylinders. Four times during the day it became necessary to pull out the beater and file the blades; to smooth up the curled edges and reshape them to the cylinder walls. Why? Because a frozen layer of cream makes a splendid insulator on the side of the drum if scraped off. Hence, the freezing mixture fails to yield maximum efficiency. See that the blades fit the freezer through out.

Freedom from rough stuffing boxes and a freezer which readily drains when washed is desirable. I have seen freezers in which a small amount of wash water would stand. With my fingers I have picked green skum from around rough stuffing boxes. The law states our ice cream must contain few bacteria. Dirt and moisture favor bacterial growth. Therefore, I prefer a freezer which slopes toward the front and contains the simplest type of stuffing boxes, such can always be kept clean, dry and sweet. Right here I might mention an objection raised to the sloping drum. Because the mix tends to collect toward the head, it is sometimes stated that difficulty is experienced in obtaining overrun. Under such conditions you should secure no overrun from a vertical freezer. But you do. Now then, where is your objection?

And now I come to my last two points; points of paramount importance. The first is that the volume of brine which circulates through the freezer. Is it adequate to furnish maximum freezing efficiency? There are freezers which admit of only a small flow of brine about the drum. Pressure is sometimes applied, but if one pauses for a moment he can realize that the volume of brine is what counts in the freezer and it must be adequate to maintain our mix at a stipulated and uniform temperature.

Drawing the Cream

The second point is that of drawing the cream. How rapidly does your freezer empty of the frozen mix? Does it require one minute, two, three or more to draw off a batch into the five gallon packer before you are ready to run in the next batch? As a suggested experiment it might be well to time your freezers and compare them with some difference makes. To be sure the mix and other factors will make a difference, but assuming we have the temperature of the frozen mix, weight per gallon of the frozen mix and other factors identical, the experiment may surprise even the most skeptical.

Finally, I want an attractive freezer. But why talk about attractiveness. You know its value, you know the value of symmetry; of durability; of design; of mechanism. To waste time on that is wasting my time and yours. We have other things more important. I have told you of the ideal freezer. Will it you should get results. If you fail, look to the operation of the ice cream mix itself or some other factor.

(Continued on page 62)

The Reputation-Builder: VANILLA

SPECIAL styles and fancy flavors of ice cream often make a hit, and sometimes become for a season or two great sellers; but they do not often build great reputations. That is rarely done except by makers whose VANILLA cream is finer than the average.

To make the BEST vanilla cream you must use the Mexican bean,—no other is quite the same; and to get that mellow, delicious bean flavor which, once tasted, is never forgotten, no other preparation is quite the same as

MICHAEL'S MEXICAN VANILLA POWDER

NEW YORK TYPE
does not show the bean in the finished ice cream. Used in districts where the showing of the bean is an objection.

PHILADELPHIA TYPE
shows the bean in the finished ice cream. The accepted standard for use in French and Philadelphia ice creams.

Our Standing Offer to New Customers

Send us an order for Michael's Mexican Vanilla Powder. Use freely all that you need to give it a full, fair trial, and if it is not satisfactory, return the remainder at our expense, and we will cancel the entire charge.

ICE CREAM FREEZERS AND ICE CREAM

(Continued from page 60)

Why Blame the Freezer?

If you are a freezer salesman and walk into a plant and are met with the rebuff, "Well, you're a bird of a salesman, that old freezer you sold me churns the cream!" What do you do, jump onto the freezer, tear it down, tinker a while, put it back and with a satisfied air tell the owner, "There you are all fixed. No more churning?" Or do you figure possibilities other than the freezer and help your customer solve the problem? Let's tackle the job. Why does the cream churn?

Cows are usually bred to freshen in the spring. They get green feed; they produce a large volume of milk, but this milk, due to the stimulus of the fresh green feed, contains extra large fat globules and soft fat globules. The cream would contain billions of such globules. So would the ice cream. Large fat globules plus soft fat globules readily unite. If the mix is relatively warm can't you see how easy it would be to churn? Had you ever thought of that? Had you ever thought that the season of the year, therefore, might be a predisposing cause of churning, in that certain conditions affect a particular element in the mix?

Again, perhaps the mix remains too long in the freezer. It might be warm—the brine might be warm and instead of freezing in 12 or 14 minutes it takes 20 or 25. Under such conditions think of the agitation to which the fat globules are subjected! How they are beaten together; an excellent opportunity for them to coalesce in little pellets and form churned cream.

A Third Cause.

Still a third cause. Suppose you have a mix that is low in solids not fat, yet with a standard fat content. You may lower the fat content considerably with but little noticeable effect on the cream but reduce the solids not fat even one per cent and you change the characteristics of the whole product with an ever attendant possibility of churned or greasy cream. Why? Because the solids necessary to protect the fat globules and keep them separate are absent.

Can these difficulties be overcome? Yes, in several ways.

First: A properly proportioned mix, containing the correct amount of fat, serum solids and sugar.

Second: Proper viscolization or homogenization. Emulsification is not always successful but usually so. We use emulsor at the college.

Third: A cold mix, 35 to 40 degrees F., when put in the freezer.

Fourth: A cold brine 6 to 8 degrees F. Some plants use 0, and some 12 to 14, but for ordinary conditions I prefer 6 to 8 degrees F.

Fifth: Proper freezing. Aim to draw the mix in 10 to 15 minutes.

Now suppose we consider a second defect of ice cream sometimes attributed to the freezer. A few days ago a dairy department received a letter which read somewhat as follows:

"Gentlemen:

"We are having trouble with our ice cream settling in the can. It is snowy and fluffy and pulls away from the sides. We believed it to be caused by excess overrun through improper operation of the freezer and accordingly altered speed. However, this failed to solve the problem. We would appreciate your assistance."

To experience perplexities such as the above by improper operation of the freezer is possible but highly improbable. Every freezer is made to run at a particular speed which for the purpose of this talk, we assume is correct. Therefore, factors other than the speed of the freezer must apparently contribute to the above difficulties. What are they?

First: A mix containing insufficient serum solids, in other words a light mix. In most cases a mix composed of 10 per cent fat, 10 per cent solids not fat (serum solids) and 14 per cent sugar is very satisfactory. Experiments show that with a 14 per cent fat—such as is made in some localities—8.8 per cent of solids not fat may be used with excellent results. But reduce the solids other than fat to low 8 per cent and you invariably get into trouble. I know of one southern firm at the present time which has a great difficulty in putting out a quality product simply because they try to manufacture a 17 per cent cream containing about 6 per cent serum solids. It can't be done unless you expect to be satisfied with "picnic ice cream." When you freeze ice cream you must whip in the air, not simply stir it in and in order to do the job thoroughly your mix must be of the proper consistency. There is almost a definite relationship between the butterfat, serum solids and sugar. They must be correctly balanced. And this, therefore, has been my purpose in emphasizing precaution against the use of a too light mix, deficient in serum solids. But, you say, if the light mix causes the difficulties mentioned will not a heavy mix do the same? Undeniably it will. You are correct!

If a factory makes a mix—one recently did, containing 38 per cent total solids composed primarily of 16 per cent sugar and 14 per cent fat—it is easy to see the apparent lack of solids necessary to hold up the cream in addition to its great weight. Reducing the sugar content to 14 per cent would not only have eliminated the confection characteristics of the cream, but would have solved a problem of cost and enabled a greater proportionate incorporation of those important serum solids. From this you can readily see that I do not discountenance the use of 36 per cent or even 38 per cent. It can be done, is done and will be done, but when the solids are composed chiefly of sugar I am opposed.

Again we find heavy mixes caused by the use of too much heavy sweetened condensed milk. Ice cream containing a great quantity of this product often settles to the bottom of a packer before it is entirely frozen causing the cream to drop. Do not think that I discontinue the use of sweetened condensed. It is an extremely valuable product, for it furnishes sugar in addition to fat and serum solids. However, I would hesitate to recommend the use of over 20 per cent in an ordinary mix.

Slow Hardening is Another Cause.

Another cause of cream settling or dropping in the packer is frequently traced to slow hardening. Should it require 12 to 18 hours to harden a five gallon packer of cream a great many difficulties may be experienced. Not only so, we confronted with the possibility of settling, but graininess and crystallization may result not to mention rising of the fat, especially if the mix has not been homogenized.

It should in no case require longer than 12 hours to harden ice cream and frequently eight hours will suffice, especially if one follows the prevalent custom of keeping the hardening room near zero degrees.

There is yet a further cause of settling in the packer or pulling away from the sides that must not be overlooked, namely, drawing the cream too soft. When ready to draw from the freezer ice cream should have a relatively stiff body. It should contain no air pockets; neither should it be foamy. The point of freezing varies between 28 to 32

An Ideal Gelatine MIXER

This double jacketed "Harris" Copper Gelatine Mixer enables you to keep the melting mass at the correct temperature desired and the agitator produces just enough action to keep the mass uniformly in motion.

RIGIDLY built of heavy copper with every precaution toward sanitation.

Easily and quickly emptied and cleaned.

degrees F. At that temperature the cream is in the most satisfactory conditions for whipping and holding the air. It should be drawn when the proper overrun has been obtained, when it has the consistency of thick gravy, curling in ribbon like formation as it runs from the freezer and when the temperature hovers around 27 to 28 degrees, although the temperature may be lower.

With that I wish to take up my last defect of ice cream, which is invariably blamed on the freezer—lack of swell. Undeniably the freezer may be and frequently is the cause. It is frequently possible through slow operation of the dashers to secure a resulting soggy, grainy or greasy ice cream, while on the other hand too rapid agitation may cause churning and also low overrun. It is this matter of insufficient swell more than any other factor that causes more disappointment, more discouragement, and more criticism not only of ice cream freezers, but also the quality of a manufactured product. It brings to our college and other state schools, more letters requesting assistance than all the other difficulties put together. Yet when a survey of the circumstances is made, the mix analyzed and conditions studied, the freezer—except it be the old style tub, usually is exonerated. Anyway why shouldn't it be? Before you blame, size up the situation! Look to the mix! Is it viscous? We know that pasteurization destroys viscosity and viscosity is necessary for proper swell.

We also know that viscosity can be restored or increased through the use of a viscolizer or a homogenizer and to a lesser extent by means of an emulsor. Likewise, we are aware that ice cream powders may be employed for the same purpose. However, for various reasons it is not always feasible to utilize powders nor is it universally possible to at all times invest in that money saving device, the homogenizer or emulsor, but it is always possible to age the mix before freezing. Whenever a mix is aged a certain physical change takes place and viscosity increases. Aging for 24 hours as the minimum, to 48 hours as the maximum will yield results providing the mix be kept cold.

Right here I want to speak of the fallacy of the so-called ripening of the mix. It is entirely unnecessary. To be sure the viscosity of milk or cream and likewise, of ice cream, increases with an increase of acidity up to a certain point, but when you raise acidity you multiply the bacteria count and augment the possibilities of sour ice cream. What little, if any, desirable qualities are added to flavor, I do not believe are commensurate with the disadvantages. When it is possible to secure perfect results in an ice cream made from a mix of low acidity, then why harp on the subject of ripening as many ice cream makers do! When the mix is properly prepared and correctly cooled and aged, the viscosity will be there and the overrun will result.

Another cause of deficient swell can readily be traced either to insufficient or excess serum solids. Solids, as already mentioned, not only increase weight, but they serve to make a mix more viscous. Hence, when the mix is frozen the air is beaten in with more difficulty, held with greater tenacity and the swell is more readily obtained.

Condensed milk, milk powder and evaporated milk all serve to increase viscosity and assist in producing swell because of the extra milk solids which they add to the mix. Sugar is likewise, an increaser of solids, but its use beyond 13 or 14 per cent causes numerous difficulties, such as lowering the freezing point of the mix, decreasing overrun and taking up space that otherwise might be filled by valuable

milk solids. It is therefore, wise to use sugar with discretion.

Then there is the question of fillers or binders and their relation to swell. Numerous experiments have been performed which prove that in the majority of cases fillers have little or no effect. However, in the light of our present knowledge, it would appear that some of the experimental work at least was destined to be blasted. For example, particularly high grade of gelatine has been shown to increase the viscosity of a mix, over 300 per cent above a control containing no gelatine. Therefore, a filler or binder which increases viscosity of a mix must of necessity bear a relationship to swell.

Fat Content Is Important Factor.

The fat content of a mix is an important factor in the matter of swell. Rich cream produces a greater yield than thin cream because the more fat a mix contains, other things being equal, the greater will be the viscosity. It is therefore, well to remember that a low fat content, coupled with low solids will not result in high overrun. Hence, we may reiterate my statement regarding the importance of a balanced mix.

The other day I walked into an ice cream plant, the operator was having difficulty in obtaining swell. His mix was correctly proportioned in fat, serum solids, total solids and sugar. It has been properly emulsified, cooled and aged but the desired overrun failed to come. Why? Because the brine was too warm. It required too long to freeze; the cream would not hold the air and swell was lost. Conversely, an exceedingly cold brine decreases swell when it results in too rapid freezing. However, it is well to remember in this connection that the more viscous the mix, the warmer may be the brine during the process of freezing, without destroying swell.

On the other hand only a cold brine should be employed for freezing a mix of low viscosity.

And with that I wish to turn to my last, yet by no means the least important cause of low yield.

What is it? Simply overloading the freezer. As a rule the larger the batch the greater the swell, and the smaller the batch the lower the yield because the small batch freezes too quickly. For best results the cream should fill the freezer one half full. Exceed or reduce this amount and the yield decreases.

Now that I have mentioned the primary causes of insufficient swell, permit me to reply to one question which is probably arisen in your mind relative to how much overrun I consider satisfactory. The answer is easy. Ninety to one hundred per cent, based on a certain weight per gallon of mix and frozen cream. Some operators prefer 120; some 140. Oh, it can be obtained all right! You can "Balloctize" your ice cream with air if you want to, but the practice is neither conducive to success nor profits in the ice cream business. Don't sacrifice quality, for quality means success plus profits, and with that I must close.

Anyone who studies the advertisements in this paper does not have to be told that it is a profitable habit. It collects the profits daily.

Three times the Weight— three times the Strength!

Patented Cold Storage Doors are so-called because of their patented hardware. Doors, in themselves, are differentiated by the quality of lumber, quality and quantity of insulation, and care and skill in general construction. The door proper should be of sufficiently heavy material and so securely built as to withstand the grind of time.

But the principal differences in doors are the differences in hardware. The hinges should be more than a mere "strap"—as of old. The fastener must do what its name implies—continuously—year in and year out.

The hardware on Jamison Doors is practical. The Spring Hinges, for instance, are adjustable—so that a slight turn of a set-screw will keep them 100% efficient—as good as new—by forcing the door tight against its seals of contact. The fasteners are "sure"—they eliminate any possibility of rebound through compression when the door is slammed. In fact, the harder the slam, the tighter it grips.

These patented features are perfect—proven so for 17 years. Probably one reason they stand the gaff so successfully is because of their weight. Experience tells that science combined with strength always wins. Which brings us to this: the hardware on Jamison Doors is three times the weight of hardware on other doors.

REPLIES TO INQUIRIES.

(Continued from page 52)

Dear Sir:—One of our plants has a good sized customer who demands a higher butterfat cream than we make, our standard being 8 per cent. This party demands 14 per cent. We figured out a mix and sent the formula up for them to go by, and they are making it and giving his satisfaction, but our ice cream maker there reports that he cannot get any overrun. I have re-checked the figures and find that butterfat content is nearly 14 per cent; total solids practically 36.50, and it just occurred to me that perhaps the various ingredients are not properly balanced to obtain the right amount of overrun.

We made up a batch or two of the same proportions and we experienced the same trouble here that he did, so it is not with the operator or the freezer, but with the mix. The largest yield we have been able to get has been a trifle over 50 per cent overrun, and you know that is entirely out of the question.

I am giving you a copy of the formula just as I sent it out.

Ingredients	Weight	Lbs. of				Total
		B.F.	M.S.N.F.	Sugar	Gelatine Solids	
70 gal. milk.....	602.7	24.1	51.2	75.3
121½ lbs. butter....	121.5	100.8	1.2	102.0
118 lbs. sugar.....	118.0	118.0	118.0
5 lbs. gelatine.....	5.0	5.0	5.0
33½ lbs. M. P.....	33.5	.3	31.5	31.8
3½ gal. water.....	29.2
Total weights.....	909.9	125.2	83.9	118.0	5.0	332.1
Percentage of mix....	13.76	9.22	12.97	0.54	36.49

Reply: Your apparent difficulty in securing a satisfactory overrun is somewhat puzzling. I do not believe that this trouble in getting the overrun is due entirely

to your ice cream mix and analysis of which you have attached to your letter. It is not out of balance in any way and hundreds of factories are securing a satisfactory swell with a formula for the mix just about 100 per cent yours.

You should, if all conditions are right, have no difficulty in getting 100 per cent or better overrun. I have led to believe that the trouble is in your process of freezing or in your method of processing the mix. Are you sure that in freezing you have not been over-loading the freezer? I should like to have additional information in order to give you better advice.

Please state exactly how you process the mix, giving the temperature of pasteurization, temperature of homogenizing, time required to cool the mix after homogenizing, temperature of holding the mix and length of time held. I should also like to know the time consumed in freezing a batch in the freezer and the weight of gallon of finished ice cream.

With this information it is possible that I can give you further advice how to overcome your apparent loss of overrun.

* * *

Dear Sir:—We have your very kind reply to your letter of April 4th. We are certainly puzzled over the question of overrun on this special mix, and we are at a loss to understand why we cannot obtain the same overrun we do with our other mix, which is handled in exactly the same manner, but which contains a low percentage of butterfat, as we are making our regular cream on a formula containing a little over 8 per cent butterfat and 33 per cent total solids.

This mix that is giving us trouble is a special mix for a special line of trade who demanded a 14 per cent piece of goods, or thereabouts, and were willing to pay the price, so we worked out the formula that we submitted to you last as being a fairly well-balanced formula that we could sell them at a price, and then after supplying them and having the quality satisfactory, we awoke to the fact that we were losing money on account of not getting over 60 per cent overrun, and at times running a little lower. We are frank to say it is causing us considerable anxiety, and also a direct, daily financial loss.

I have checked up the questions that you ask and find that we are not overloading the freezers, and our method of processing the mix is to pasteurize the entire batch, including sugar and gelatine, at a temperature of 145 degrees, holding same for thirty minutes, and then homogenizing, and it is cooled as homogenized by running over a tubular cooler of sufficient capacity to take care of the output of the homogenizer, which is 200 gallons per hour. We cool to about forty degrees, the only difference in the special mix and our regular mix being that we run our regular into holding vats of 500 gallon capacity, but as we only make up a small quantity of special mix, we run this into ten gallon cans and put them in a cold storage room at a temperature of thirty to thirty-five degrees.

We never freeze under twenty-four hours, and some of this special mix we have held for seventy-two hours in order to give it an opportunity to age and ripen. The weight on the finished product is 5.15 pounds per gallon and we freeze with brine at a temperature of from six to seven degrees, taking an average time of seventeen minutes to freeze. We are still experimenting, but seem to get no farther along, and we write, giving you all the information we can, to see if you can suggest anything.

I neglected to mention that this mix when cool, and especially after standing a few hours, seems to be of a very thick, heavy consistency, about similar to very heavy condensed. My freezing man claims this is the

MORRIS BOX 18 ILLINOIS

trouble—that it is so heavy and thick he is unable to whip it up to the proper consistency.

Reply: From your discussion, especially in the last paragraph of your letter, it appears that your difficulty in not getting the overrun is due to the very thick, heavy consistency of the mix, and which is due to the large amount of solids compared with your other mix and possibly also to too much gelatine.

I know of ice cream factories who have been able to get 100 to 120 per cent overrun with mixes containing a total solids as high as 40 per cent. I suggest, however, that you try the formula given below in table one where I am indicating a 900 pound mix for you, testing 14 per cent fat, but you will notice that I have reduced the amount of gelatine and the amount of skim milk powder, giving you a total solids of 34.5 per cent. I believe that with this mix you will have no difficulty in getting a satisfactory overrun and I also believe that this special mix will meet the requirements of your special trade.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
602.7 lbs. milk 4%	24.1	51.03	75.03
121.5 lbs. butter 84%	102.06	102.06
118.0 lbs. sugar	112.10
3.0 lbs. gelatine	2.85
20.0 lbs. skim powder	19.00	19.00
34.8 lbs. water
900.0	126.16	70.03	311.04
Per cent	14.18	7.78	34.5
Per cent sugar	13.11

The finished ice cream should weigh not over four and one-half pounds if you are to get 100 per cent overrun.

17-23 North Desplaines St. CHICAGO, ILLINOIS

ASK THE MEN WHO USE IT

have revised this mix as follows, and would appreciate any suggestions that you might care to offer: 425 pounds 4 per cent milk; 183 pounds sweet condensed—40 per cent sugar and 60 per cent reduced 5 to 1; 34 pounds sugar; 60 pounds sweet butter; 2. pounds gelatin pound Purity powder; total 705 pounds.

I am trying to standardize my mix at approximately 12 per cent fat and about 33 or 35 per cent solids.

Would you be so kind as to accommodate me with a formula for a 700 or 725 pound mix using 4 per cent milk, sweet butter, sugar and skim condensed (plain).

Reply: I have calculated the ingredients in the mix which you have given in your letter. You will find the tails given below in table one. You will notice that I have figured your sweet condensed 40 per cent sugar and 60 per cent total solids, allowing 20 per cent for serum solids.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
425.0 lbs. 4% milk	17.0	36.31	53.31
183.0 lbs. sweet cond.	40.60	36.60	109.80
34.0 lbs. sugar	32.30
60.0 lbs. sweet butter 84% ..	50.4	50.4
2.0 lbs. gelatine	1.90
1.0 lbs. purity powder95
705.0	67.4	72.91	248.66
Per cent	9.5	12.0	35.3
Per cent sugar	15.2

In view of the fact that you seem to think your ice cream tests 12 per cent fat, it is possible that I made an error. Your sweet condensed also contains some butterfat. You will notice that the butterfat test of your mix figures 9.5 per cent, but if the sweet condensed tests 8 per cent fat the test would be 11.6 per cent.

I am suggesting in Table two, a 700 pound mix made up with 4 per cent sweet milk, butter, sugar and plain skim condensed, according to your suggestions.

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
98.0 lbs. sugar	93.10
3.5 lbs. gel. & powder	3.30
140.0 lbs. plain cond. 27%	33.80	33.80
83.0 lbs. 84% butter	69.72	69.72
375.5 lbs. 4% milk	15.02	32.04	47.06
700.0	84.74	65.84	246.98
Per cent	12.1	9.4	35.2

Report of National Associations' Cost Accounting Committee

By S. T. NIVLING*

MY co-workers on this committee are the same as last year, Jas. G. Lewis, secretary and treasurer, Rieck-McJunkin Dairy Co., Pittsburgh, Pa.; Vernon F. Hovey, manager, International Ice Cream Company, Schenectady, New York; C. F. Eurich, assistant treasurer, J. M. Horton Ice Cream Company, New York City, and C. B. Harpster, auditor, Crane-Ohio Company, Columbus, Ohio.

At various times throughout the year this committee has met and given careful thought to the problems of

S. T. NIVLING.

cost accounting with the object in view (at all times) of ascertaining whether we might assist our members to a more thorough knowledge of this very important subject.

In compliance with the report and recommendations of last year's auditing committee, the president instructed the cost accounting committee "to secure the service of a certified public accountant to install a new accounting system in the secretary's office, and that the firm so engaged should bring in a certified statement of

the secretary's book at each annual meeting"

This committee recommended the employment of Whitfield, Whitecomb & Company who are now and have been putting in a uniform cost accounting system for the International Milk Dealers Association and recommended to your president that said company be employed for the term of one year, the committee feeling that they had no authority to go beyond the one year term.

In last year's report this committee stated that it might become necessary in the near future to make a service charge on the basis of each cabinet hole and after giving very careful consideration of the subject, the result of their deliberation was a unanimous decision favoring the service charge per cabinet hole as fundamentally sound basis for payment for services rendered by ice cream manufacturers.

Believes Practices Will Be Generally Adopted.

The committee believes that a general adoption of this practice throughout the industry will result in an equal profit per gallon from each customer. We feel that the present flat price results in unequal profits per customer and that the adoption of the service charge per cabinet hole would result in fairer prices to manufacturer and dealer. A payment by the customer for services rendered is a sound business basis when coupled with a reduction in the fundamental selling price.

The result of the committee's deliberation on this subject is embodied in Bulletin No. 67 issued from the

* Chairman of the committee, submitted at the annual convention of the National Association of Ice Cream Manufacturers, Cleveland, October 25, 1923.

secretary's office, and the committee desires again re-iterate its statement that it considers the charge per cabinet hole as fundamentally sound principle and recommends it to our members as furnishing the best method of securing payment for services rendered.

Cost Accounting.

Early in the year I had the pleasure of a conference with President Morris, at which time we gave consideration to the subject of better accounting for the industry. At his suggestion I called a meeting of the accounting committee at the rooms of the Chamber of Commerce of the United States at Washington. At the meeting in Washington we were addressed by E. W. McCullough, head of the Fabric Production Department and Thomas W. Howard, of the Cost Accounting Division of the Chamber of Commerce of the United States. We were also addressed by Arthur Lazarus, former chief of the Cost Accounting Division of the Chamber of Commerce of the United States, and also by a representative of Whitfield, Whitecomb & Company, who are installing a uniform system for the International Milk Dealers' Association as above stated.

The result of the deliberation of our committee is the following recommendations to the executive committee:

"The cost accounting committee recommends to the executive committee of the National Association of Ice Cream Manufacturers that they employ the firm Whitfield, Whitecomb & Company to assist this association in the work of perfecting a uniform system of cost accounting. The committee further suggested that special attention be made that T. J. Bolitho be put in charge of particular work.

The committee also recommends to the executive committee that a cost accounting group or council be appointed including thirty or more accountants or executives representing this association to work as an advisory committee in conjunction with the cost accounting committee in carrying out this work."

We suggested immediate action because the international milk dealers had about completed their work and were ready to publish their manual. By going along with the work the system of the international milk dealers could be dovetailed with ours and it would be mutually beneficial and advantageous to the milk dealers and ice cream manufacturers, as many of our members are in both lines of work. It is the thought of the committee and also Mr. McCullough of the Chamber of Commerce of the United States that to employ the cost accountant would be profitable to us, mutually helpful to both industries and naturally a benefit to a great many of our members.

The object of a large committee composed of accountants representing our association is that the industries would be building their own cost system and the fact that with such a large number of accountants assisting in this work it would naturally follow that they would be selling the proposition to themselves and thus it would require practically no introduction of a new accounting system within the industry.

As reported at last year's convention our committee endeavored to arrange classification of accounts. We assumed that all manufacturers could submit their figures on a per gallon basis and thus arrive at a conclusion as to which department of their organization costs were

in excess of the average. Our efforts resulted in failure. The committee itself tried it out within our own little organization to verify its practicability before presenting it to the national membership.

I quote you a bulletin of the Chamber of Commerce of the United States, "Cost accounting should not be considered an incidental and temporary service to the manufacturers of an industry, but should be organized on a permanent and continuous basis. This may be done first, by forming a cost association or department within the trade association where the cost accountants of the manufacturers may meet three or four times a year to discuss such improvements and changes as should be made in the standard cost system, or, a cost accountant may be employed by the secretary of the group who, in co-operation with the cost accounting committee will promote such changes in the cost procedure as may be necessary from time to time.

"The services of an outside cost expert are valuable and necessary at some point in the development of uniform cost finding, but these services should not be relied upon solely. A system should be developed by the co-operation of those in the industry who are best posted on the cost branches of the manufacturing problems of the industry."

Determination of Cost Is Fundamental.

C. N. Hurley, former head of the Federal Trade Commission, stated in a pamphlet published in 1916, "that accurate determination of cost is fundamental to manufacturing efficiency" and he further said that, "every man who joins in this work can feel that he is doing his part toward the improvement of business conditions generally and his own business conditions particularly."

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order—"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

Baker Ice Machine Co.
Omaha, Neb.

The Chamber of Commerce of the United States realizes the importance of the subject and has a permanent department devoted to the cost accounting work of trade associations and manufacturers. It is a strong and working force designed to promote efficiency in cost accounting in trade associations. The chamber has published numerous pamphlets on the subject, the latest one on the "Acceptance and Installation of Standard Methods of Cost Accounting" will reach your desk within a few days if not already received by you.

The Department of Commerce of the United States government has just published a 400-page book entitled "Trade Association Activities" and in that book an entire chapter is devoted to the subject of cost accounting. The Department of Commerce recognizes cost accounting as a desirable and proper activity of trade associations and recommends to trade associations the furtherance of this work, believing that it will result in standardization, equalization of costs and ultimately reduced prices.

"A scientific cost accounting system properly applied raises the entire tone of an industrial or commercial group through promoting intelligent competition, increasing comparative efficiency and making it possible for the individual units to establish better credit ratings which, in turn, attract trade to the group. Simply a cost system is instrumental in approving quality and systematizing and stimulating production and distribution through checking variations from standard practice and helping in the control of overhead. Perhaps an outstanding advantage is its aid in making income and other tax returns."

Commenting on methods of procedure in installing a cost system, Secretary Hoover's Department says, "a conference of operating and executive heads should be held, and data obtained should be turned over to a chosen firm of outside cost accountants to be developed with the assistance of the executives and accountants in the industry." The department further suggests the appointment of a special committee to secure the attention and active support of the entire membership of the association. It comments that some associations have given it to their members while others have found it advantageous (and it is appreciated more) if the members chase it.

Commenting on the value of trade association work along cost accounting lines, the Department of Commerce Bulletin of this Government contains the following:

"The worth of uniform costs to the members of a trade association will depend upon the use which they make of them. If composite costs of a given group are placed in the hands of the reporting members, each has an opportunity to check the efficiency of his own plant, to manage against the field and to profit thereby. Frequently an association may tabulate costs of separate manufacturing operations including the figures of the reporting members, the designation of the individual members being in code and known only to the executives of the association. The member, thus, has an opportunity to check his cost results against those of other members individually. Having such information, especially if reports are in sufficient detail, he is enabled to correct or modify his errors or practices and thus bring his costs more nearly in line with those of his competitors."

"Too frequently comparable cost data are not collected and disseminated by the associations at regular periods, the only activity in this respect being at irregular intervals when called upon by some investigating committee. To be of the utmost use there should be a constant, current exchange of cost information."

properly tabulated and safe-guarded as to identity, if desired, among the members of the association.

"Such a knowledge among the members of an association with proper publicity as to average costs and the important reasons for changes and fluctuations, eventually must have a stabilizing effect upon the industry and tends to inspire confidence upon the part of the public."

M. C. N. Gaskell, chairman of the Federal Trade Commission has stated emphatically that "cost accounting is a legitimate trade association activity" and that "to prohibit collective study of costs for the purpose of their analysis is to shackle educative progress."

The Chamber of Commerce of the United States has also from its inception seen the necessity for and the value of the development of sound cost accounting within the various industries of this country. Today there are something over one hundred national organizations making this one of their major activities.

Value is Apparent.

The value of this work endorsed by the Chamber of Commerce of the United States, the head of the Federal Trade Commission, the Department of Commerce of the United States Government and the leading executives within this country, should be sufficient evidence to warrant its adoption by any progressive industry.

It is the thought of your committee that if the national association is to render service to its members it must of necessity do something more tangible than simply accumulating a War Chest and using efforts to prevent adverse legislation. Of course, we have the annual convention, which is very valuable and growing more so each year. However, the annual convention, to

render the greatest benefit to its members, should take up some of the problems of the industry in order to solve these problems or assist its members in solving them.

Your committee wishes to state further that they speak of a uniform system they do not mean a change of systems in the plants of manufacturers already have a system installed, but rather to formulate a set of principles and a manual to be followed by all engaged in our industry to present a uniformity of unit costs which will be comparable with other manufacturer in our line of work. To create an outstanding impression that a uniform cost system implies uniformity in all details, we desire to state that such would be entirely impractical and the most uniform perhaps would be uniform methods of accounting, the definition here implying that while the methods are uniform, the records, forms, etc., necessarily will vary to suit the needs of each individual case.

Your committee has given thorough consideration to the question as to whether the cost expert's assistance in this work is justified by the expected results. Their answer is in the affirmative.

Their report was represented to the executive committee on April 12th last and the report was taken up for consideration.

The action of our executive committee is justified by their desire to conserve the finances of our organization; however, unless there is sufficient demand on the part of our members for constructive activity, cost accounting work, and co-operation on their part, the efforts of the cost accounting committee to assist members in accurate and uniform methods of cost reckoning will be unsuccessful. The executive committee must first be convinced of a bonafide desire on the part for a continuation of this work; then they will weigh carefully the possible cost and endeavor to determine the expected result.

The committee suggests formal action at this time.

Respectfully submitted,

COST ACCOUNTING COMMITTEE

National Association of Ice Cream Manufacturers

PENNSYLVANIA FIRM TO ERECT NEW BUILDING

The W. H. Walker Company of Somerset, Pa., will erect a new building in Somerset this fall and expect to have it completed in time for next spring's business.

The McCormick Company, Inc., of Pittsburgh, Pa. New York now is preparing plans which call for a two story and part one story building to be constructed of brick and reinforced concrete.

In addition to a complete ice cream plant, with ice tank and mechanical refrigeration, there will be a condensed milk department and refrigerated rooms to handle considerable sweet cream which the company ships to distant points.

The plant is to be erected upon a site recently purchased on the state highway which has recently been completed to connect the Lincoln and National highways through western Pennsylvania and is expected to be much used by automobile traffic.

You can find the person who will be glad to buy your product, or you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

Report of National Association Vigilance Committee

By WILLIAM PALMER*

THE vigilance committee, which was created by the board of directors following the convention of 1922, has been limited in its activities during the year by the lack of knowledge in the membership, both as to its existence and as to the purpose of it.

It was the idea of the board in setting up this new agency for usefulness that the inter-relations of our members might be made more harmonious and more cordial if controversies or misunderstandings over prices, advertising, competition and like disturbing questions or conditions could be referred to a committee of the membership whose duty it would be to quietly and with that utter lack of personal feeling or pride of opinion, which is always impossible for the direct parties to have or to hold under such conditions, to go over the situation and by suggestion and friendly argument seek such adjustment of the controversy as would result in establishing mutual confidence between the concerns interested.

Manifestly, such results can be reached only to the extent that the membership avails itself of the opportunity offered to bring to the attention of the committee their problems and difficulties. The country is wide and a bitter war might go on quite indefinitely in some sections of it, before the fact became generally known. The harm to the industry and the ill effects upon the locality, nevertheless, would be immediate and continuous.

We trust that this conception of our duties will not be misunderstood. We have no desire, much less any authority, to control the conduct of anyone's business. We lack every vestige of power, save only that power which arises from an honest desire to see the right and to point it out to others who alike search for it—the power of good will and friendly interest.

Our only desire is to aid and to serve. While we observe and inquire, we do not sit in judgment. We seek not to place the blame, but to correct the fault, if one exists. Ours is not the province to determine that one is right and the other wrong, but to unite both in a sincere effort to promote their common interests. It is to the lasting credit of our organization that there are in it so many men working to avoid the creation of these situations, or to adjust them if created, but sometimes passion or resentment or misunderstandings or discouragements will obscure the vision of clear eyes and then some one outside is needed to clear away the mists. These are the opportunities of this committee.

Architects and Engineers

BUFFALO - NEW YORK

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Soon after our appointment a conference was ranged with a similar committee appointed by the national association of supply men for the purpose of determining the extent to which we might co-operate in the discharge of our duties. At this meeting it was determined that all questions relating to or affecting publicity which should come to the attention of either committee whether through complaint or by its own observation should be a subject of joint consideration and action. Under this agreement several matters of character have been investigated and decided during the year. Our practice in each case has been simple. A matter which was the subject of criticism has been fully considered. Its effect upon the fortune of the industry at large, as well as the possible benefits to be derived from its publication, have been considered from all angles, and in each case the recommendations of the committees have been accepted without protest or sentiment.

Only two instances affecting the inter-relationship of members of the association were brought to the attention of the committee during the year. The first arose in widely separated sections of the country. It was an instance of unfair competition by means of advertising whereby through unmistakable insinuation the quality of the product of an immediate competitor was attacked. The seat of the trouble was too far removed from the location of any member of the committee to permit a personal investigation, but a satisfactory adjustment of the difficulty was reached through correspondence, without undue delay and it is the opinion of the committee that the member involved in the complaint was not an unfair competitor in its general practice but that the instance in which your committee acted was one in which the rules of good business and fair competition were violated without harmful intention.

The other case was an instance of unfair competition by means of secret price cutting. As this difficulty arose in a locality not far removed from the home of the chairman of your committee, the matter was adjusted by means of a personal visit to the interested parties and a joint conference between them. As the condition did not represent the real standard which the offending member conducts its business, it was an instance of over-anxiety to develop and keep up trade. It was not thought advisable that the committee should submit, in detail, a report of its activities to this convention. No good purpose would be accomplished by making public names, addresses and particulars in each case coming to our attention.

This general summary of our work is submitted to indicate the field of our activities and the results of our efforts have attained. It has not been easy always to approach the subject under consideration but with satisfaction that we report that the membership has received our suggestions in good spirit, and seemed to appreciate that we have no desire to accomplish our purpose to serve except the interest of the industry.

Dated, October 24, 1923.

The Gaulin Homogenizer

Efficient - Durable - Economical

YEARS of constant use by the leading ice cream and dairy plants the country over have proved The Gaulin Homogenizer the most efficient, the sturdiest and the most durable machine of its kind manufactured.

Gaulins have no equal in length of service—they are *built to last*. Many of our original installations are still in daily use, operating with the same high standard of efficiency, in some instances under homogenizing pressures ranging from 4,000 to 5,000 pounds.

If you are contemplating the installation of new homogenizing equipment in your plant, we recommend your investigation of the *superior merits* of The Gaulin.

Standardize on The Gaulin and insure uniformity of the mix.

Write us today for our illustrated catalog. No obligation.

The Manning Manufacturing Co. of Rutland, Vermont, will act as our distributors after January 1, 1924.

Research Pertaining to Some of the Difficulties of the Ice Cream Manufacturer

By C. H. KIMBERLY and J. W. HUDSON*

FLYING through the air at 274 miles an hour makes demands that we knew not of with the "One Horse Shay," similarly our modern ice cream plants require much that was not needed when the product of the freezer was consumed almost within the hour right at the tables of the manufacturer.

From the moment the idea of ice cream manufacture enters one's mind problems begin, and embrace every endeavor, problems of plant design, construction, machinery, refrigeration, processes, storage, marketing, etc. to say nothing about those of allied industries, that affect us so closely as to become part of our burden. All those are operating problems, but we also have the technical and ethical matters to consider and within their province lies the foundation upon which the success of the modern business is built, or crumbles to failure.

To the technical laboratory in our relation to your association and industry come especially the latter problems, the what, why and how, of the agencies exerted by Nature in working her wonders and completing her plans, and we are asked to determine the cause and suggest the cure for the effects of chemical, bacterial or enzymic actions.

There is always plenty to be done when we are dealing with products so susceptible to these agencies as are the ingredients entering into the composition of

ice cream, yet the difficulties are overcome not by antagonizing or overcoming natural action, but by properly controlling them. The "ounce of prevention is of paramount importance."

You want the delicacy of flavor, the fineness of texture, the richness in appearance, the smoothness of general superior qualities, obtainable only by the use of pure materials the intelligent methods of preparation and the utilization of all of the natural agencies of ripening, aging, mingling, flavoring, etc., and yet you want the opposite results of off flavors, roughness of cream, faulty coloring or spottiness of cream, mould changes, which are caused by allowing natural factors to obtain control.

Today we wonder how results could have been obtained without the aid of thorough pasteurization and sterilization, and the answer is that it was not at all possible to do so, but that we always have not known though we did not so fully realize it in the past as we do today. The solution of so many of our present problems depend upon these factors that we can strongly impress upon you their importance.

Pasteurization is a term used when liquid is heated with the distinctive object of destroying bacteria, particularly the disease producing bacteria present.

It does not injure the milk, since it does not change its chemical composition materially, nor in taste, or odor is it rendered unpleasant, and while it is not the water soluble vitamin C, this is easily supplied either children or adults, by the use of what should be a part of our diet anyway, citrus fruits or green leafy vegetables.

It is generally believed that it prevents souring of milk, but it does not, for milk will sour naturally to the fact that while the number of all bacteria is reduced the relative number of the acid forming bacteria in proportion to other types present, is increased. The process is carried out according to the present standard method, which is that of holding at a temperature of 145 degrees F. for thirty minutes, the so-called "batch" or holding method. There are two other methods recommended for milk, the flash method, not much used in this country and not likely to become popular, in which the milk is heated at a temperature not less than 180 degrees F. for one half to one minute and immediately and rapidly cooled; also the bottle method which has definite merit and should become more popular. In the first the milk is first bottled then subjected to the pasteurization process.

An interesting side light in pasteurization, has been brought to our recent attention due to the investigation by the U. S. government and others, of a form of bacterial development that seemed to periodically appear from nowhere and likewise go nowhere. It made its appearance often enough to become a serious problem in counting bacterial plates where it was found in an infinite number of very small colonies, hence, the name "pin-points." It has the peculiar characteristic of incubating at the usual temperature of pasteurization so that when we were destroying the usual bacteria we were actually multiplying by millions this type, now called by the U. S. Department of Agriculture, the *lactobacillus thermophilus*. Where pasteurized raw milk will show a low count, but the same milk after pasteurization shows a vastly larger count. We have many of us taken an interest in this problem.

What Science Has Done to the Bubbles in Your Ice Cream

BUBBLES in ice cream? Sure! Billions of them. Invisible to the naked eye, they are there just the same, and it is these billions of tiny bubbles that keep ice cream from freezing into a hard lump like a cake of ice. Under a powerful microscope you can see them, little cells surrounded by the fragrant and delicious mixture of cream, flavored and sweetened.

In making ice cream the mixture is poured into the freezers and paddles set to work beating it. The cold increases steadily. Still the paddles beat. And every beat of the paddles adds bubbles to the mixture until the whole mass is filled with tiny bubbles. So about half the volume of such finished ice cream is air in minute bubbles.

These air bubbles always contain impurities that impair flavor. Moreover the air, even if chemically pure, destroys the vitamins which give ice cream its high value as a food. Hence scientists long sought a means of making ice cream and other mixed food products in an atmosphere devoid of the destructive air.

Heathization Solves the Problem.

Paul Heath, a young Spokane scientist, solved the problem by devising means of replacing air in food manufacture with a pure, dustless, nonoxidizing atmosphere. He did it by expelling the air by forcing carbon dioxide into the food container. Ice cream is now produced, millions of gallons annually, in this sterile atmosphere. The name of the inventor has been attached to the process wherever used, and for whatever purpose, it being commercially known as Heathizing.

The world of science awoke at once to the vast possibilities inherent in the Heath process. It has been acclaimed as a far greater step toward food purity than Pasteur's discovery now used world wide in the pasteurization of milk, because it affects so much wider a field of foods than the French scientist's discovery. After intensive study of the Heath system in relation to food economics, renowned experts everywhere unite in commending its theory and practical results.

Boston Scientist Praises System.

Prof. Samuel C. Prescott of the Massachusetts Institute of Technology, Boston, says:

"Perhaps the most spectacular, valuable and widespread use of this method of food preservation is in the Heathization of butter and ice cream—a process now doing much to raise the commercial standards of these foods. The air worked into butter is recognized by experts as one of the chief deteriorating influences from the standpoint of fine

flavor. To use vacuum churns was impractical, and the next step, worked out logically and with scientific precision by Mr. Heath, was the process to which his name is given. With the new knowledge of the relative effect of air and of carbon dioxide on vitamins occurring in butter fats, the soundness of the principles he has established cannot be gainsaid. It surely seems as if this process should become universal.

"In making ice cream the same principle holds good. The use of a pure inert gas in place of a possible dirty air, the reduction of oxidations of fats and the preservation of vitamins—are, however, the same. Comparative studies in my own laboratory, using a large group of students and others as test individuals to detect differences in flavor and appetizing quality, brought interesting results. Ice cream of identical composition as to the "mix," but frozen in the atmosphere of carbon dioxide, was held superior in texture and flavor. That carbon dioxide tends to accentuate flavors was demonstrated. No manufacturer who desires to sell a poor product or to make an "off-flavored" butter or ice cream can derive satisfaction by use of carbon dioxide. A good product is made better, but a poor one is made less satisfactory in flavor by its use. The tendency will therefore be, as this process extends in use, to raise the standard of quality of these foods. Those who cannot compete will have to withdraw or be satisfied with producing a distinctly inferior product at a lower price."

Process Benefits Public Health.

Dr. Jacques W. Redway, F. R. G. S., is one of the world's foremost authorities upon air contaminations. He is the author of a federal bulletin upon that subject, and in a number of his articles has commended Heathization most highly. He says:

"Heath forces carbon dioxide in at the bottom, thereby displacing the air at the top. With careful manipulation, practically all the free oxygen is expelled. There is neither chemical nor medicinal action in its use; it merely expels the air which contains the causes of deterioration; and no matter what the economical features of the process may be one thing is certain—it is in the interest of public health."

In the ice cream industry, manufacturers in all parts of America are Heath enthusiasts. As it is only possible to use the very best materials in the making of Heathized Ice Cream, manufacturers welcome the Heath process because it certifies to the purity of their product.—Advertisement.

it seems definitely proven that this type is harmless, and can be destroyed, by exacting cleanliness through sterilization of equipment, and subjecting contaminated milk to a pasteurizing temperature of 180 degrees F. for two minutes.

Some study of this matter made in our laboratories indicates that the source of this so-called type may be only the usual forms of milk bacteria which through conditional environment, have been changed in character, as described, but careful study will still prove most interesting.

The first word of our subject, research, usually conveys the impression of profundity of thought, of endeavor, of time, as if it be a word to be held in awe and to be considered as something beyond the reach of all except the most favored of individuals. We wish right now, with you to destroy that false impression and hope to get you each to feel that you may do your part in the field of research opened by the industry which we all serve.

Research is nothing more nor less than an honest investigation of any problem be it great or small, if its solution be undertaken with a sincere purpose and with ordinary intelligence. It is naturally a fact that a person of little education or small practical experience cannot conduct an investigation into technical problems of which he knows not even the reason nor the beginning, no matter how greatly he may realize the need, but with questions that come within his plane of ability he can surely do his bit.

The highest research is naturally that where a careful technical education is combined with long practical experience, and it is often necessary to have these qualities either combined in one person or brought together through association of several, each giving his special abilities to the work at hand. The latter often is the

better, due to the diversity of viewpoint, and the general work of such association as yours, may be instrumental in producing excellent results, in statistical and even legal research.

No matter how difficult a thing is, it seems at once we know how, and we are prone to belittle the importance of the rule for preventing its recurrence. Familiarity breeds contempt, and we slip back into old ways, with the consequent results, "Watch your step," is a good adage for us to keep in front of us.

It will not be proper for us to take up your time to cover many of the results of research regarding trouble that beset your industry, for this would not serve you inasmuch as these results are usually reported through the trade journals, if they are made public at all, by the investigator, and we shall mention only a few that will come more closely within our own study within next months.

Greenish Black Spots in Chocolate Ice Cream.

This disturber of the peace of mind of the ice cream manufacturer has made its appearance here and there for many years, but has for some reason never come to sufficient prominence to demand solution.

Rust stains alone will not be sufficient to produce the spots and that in most cases considerable time and contact is necessary. Moreover the cocoa itself has much to do with it and the trouble can be so easily eliminated by rejecting all cocoas or chocolate when made into solution and treated with a few drops of a solution of ferric chloride, produce a black or greenish color in the solution, that little difficulty should be experienced with it. Moreover, cans free from directly exposed surfaces of iron, or the use of can liners will also prevent it.

As another phase of this discoloration, we found while studying the chemical results above described that the molds especially of the types *penicillium* and *aspergillus*, developed greenish black spots especially around the top rim of the can or under the paper liner. The conditions are ideal, for with excellent food upon which to develop and with moisture and darkness they are almost certain to appear if the infection is afforded.

However, due to these same conditions these molds do not develop fully and therefore, the spots do not once show their true nature. In our laboratory tests they developed very distinctly, on all flavored mixes, but peculiarly did not produce the dark spots on any except the chocolate flavor. They might, therefore, be mistaken for the spots of chemical origin, but as stated, when plated the difference is readily shown.

The solution of this trouble is readily seen, being only one of the usual precautionary measures of cleanliness and sterility.

Off Flavors in Strawberry Ice Cream.

We have examined many flavors of strawberry ice cream and have nearly always found mold to be present, in varying quantity depending we believe upon the atmospheric conditions, at the fruiting season. The fruit, therefore, offers a source of infection which will require great care in the cleaning and sterilizing of pipe lines and machinery, for a mold infection spreads rapidly unchecked. Infections may come also of course, from outside sources.

The disagreeable flavor usually does not appear until the cream has stood for sometime in cabinets or storage, unless the contamination has progressed extensively.

A thorough cleansing of storage rooms, pipe machinery, etc. with the use of a strong sterilizer usually the chemical type is necessary to destroy the mold, and

BARBER

Everything for the Dairy Industry

Battery of Six 60-Quart U. S. Freezers—Plant of Tauber Absopure Ice Cream Company, Chicago

Improved U.S. Heavy Duty Freezer

IF YOU believe in the economy of good equipment it will be merely a question of time until the U. S. Heavy Duty Brine Freezer is standard equipment in your plant—the freezer that through sheer merit has won a place of indisputable leadership.

The U. S. Freezer is equipped with every modern device for the saving of time and labor and for the improvement of its product; rotary brine control valve, gravity operated automatic batch weigher, new fruit inlet and peep hole,

improved mixture control valve, bronze bearing support for front end of dasher, hinged cover, chain guard for all motor driven machines.

All belt driven machines are convertible to direct motor drive if desired.

Seven sizes, with capacities ranging from 40 to 160 qts., making it possible to use this sturdy freezer in any plant, large or small.

We shall be glad to give you complete specifications and prices on request.

THAT HOT SPRINGS TRIP IS A BRIGHT FEATURE OF THE SOUTHERN CONVENTION.

if the infection in the berries is bad, they also should be cooked before using. We find that the usual temperature of 145 degrees F. is not sufficient, but that the fruit must be held at a temperature, not less than 180 degrees F. for not less than 15 minutes; we have found but little difficulty in overcoming the unpleasant conditions when it was due to molds, but the cure must be thorough and the treatment drastic.

There are many other causes for off flavor in strawberry or in any flavor, and each must be traced to its source, and then corrected by suitable methods as the case may require.

Sandy Ice Cream

This is of such common occurrence that it has been often discussed, and we wish only to add—that our study of it shows that it is due entirely to the crystallization of milk sugar. The way to prevent it is to use raw materials that do not contain crystallized lactose, or if present, to dissolve by mixing hot or by pasteurizing after mixing to and keep the proportion of M. S. N. F. low. If these run above 10 per cent the milk sugar will crystallize with varying duration of storage, even if it does not appear at the freezer. It has been suggested that the trouble cannot be overcome, and that the grittiness be made as little apparent as possible by seeding the mix with exceedingly fine lactose crystals forming nuclei for the formation of a large number of small crystals instead of a smaller number of larger ones. We do not think this advisable for with proper care, we see no reason why it should not be readily overcome.

Flavor and Texture

The best means of obtaining quality is by selection of raw materials and by putting them through to finished product and to the customer as quickly as possible.

Dependable!

The extra strength put into every part of Nutting Trucks explains why thousands of them are still in daily use after 28 to 30 years of service.

Nutting

**Floor Trucks for
the Dairy Industry**

Get our Bulletin C-6 and note the platform construction, the wheels and the casters of Nutting Trucks and you'll see why they give long, dependable service. This bulletin also describes several trucks for dairy uses, including the Nutting Ice Cream Can Truck.

Manufacturers who have placed them in use side by side with competitive makes tell us that Nutting Trucks outlast others, often by many years.

Bulletin C-6 tells why Nutting Trucks give "Most year's use for the money." Write us for your copy.

NUTTING TRUCK CO.

1143 Division St.

Faribault, Minn.

Representatives in Principal Cities

There is, however, many possibilities in the use of rennet or pepsin or in bacterial cultures. The changes that can be produced by their use are many and without doubt improve the quality but naturally great care and exactness of control must be taken in order to get the desired results, for there is a proper acidity which might be easily exceeded with disastrous results. Development under practical plant methods will be very interesting.

Meanwhile, we suggest that a cultured buttermilk could be used to impart the acidity and the lively sharp pleasant taste that is desired.

The buttermilk naturally must be made with pure cultures and with care so that a high grade product is obtained.

The consumption of ice cream has been increasing steadily, but more particularly since the name "Vanilla" became a by-word.

U. S. Government statistics show that the country consumed:

1922—263,520,000 gal. per capita—2.43
1921—244,000,000 gal. per capita—2.20

19,520,000 gal per capita—.23 gal or about 10

It will increase still more rapidly if the individual manufacturer studies his processes, his raw products, his marketing and attempts to give his consumer a fair return for his money in wholesomeness, in nutrition, in confection value. No firm can long succeed who produces off a faulty product from any standpoint. A satisfied customer is one's greatest advertising. Another way in which consumption may be multiplied is in making your ice cream formula such that it is a true food or as dieticians say a balanced ration. Ice Cream now is a confection, a nourishing one it is true, but still a confection, containing too much fat for ones good and to rich to permit of being eaten in quantity, due to the feeling of fullness produced. It is, therefore, consumed largely for its pleasant flavor.

If the ingredients were proportioned around 8 per cent fat and 10-12 per cent solids-not fat and 13 per cent sugar, we would have a more nearly balanced food and could be enjoyed at a sitting and production would necessarily increase. The palatability need not be reduced for the use of high grade fresh selected raw materials, wholesome fine flavor, fruit, etc. We can maintain the quality and flavor at a higher plane than it is now and furnish to the consumer a product in every way better, pleasanter and of greater value.

A few days ago, I visited the "Colorado," the world's greatest battleship recently put into commission.

by the United States at a cost of over \$27,000,000. Such a ship has a life of about 15 years, and it is believed and hoped that it will never fire a gun in warfare, but that its work will be a work of peace.

It is exploited as an enormous research laboratory in which every one of its crew of over 1,200 men of all grades of education and ability are to do their bit in solving the problems of marine industry and commerce.

This is only one example of what our government is constantly doing to assist the industries of our great country, and we leave you with this thought that everyone concerned with the ice cream industry must strive to make it bigger and better day by day. We must build the future on the foundation we place today. Let us be sure the foundation is laid wide and deep with honesty, integrity, square dealing and service to the public to whom we must look for approval in order to develop our industry to where it belongs, at the top of the list.

ICE CREAM "ROUND UP" IN NEBRASKA IN FEBRUARY.

February 19 to 24, 1924.

The University of Nebraska will aid ice cream manufacturers to run down their ice cream problems, brand them and bring them to the "second ice cream round-up" at Lincoln, Neb., February 19, 1924. The Department of Dairy Husbandry announces a week's round up for those engaged in the ice cream industry. Those interested are requested to bring their questions and problems which will be discussed. Those requiring actual experiments will be studied in the creamery where complete equipment is available.

This equipment includes a 50 quart Cherry and a 40

quart Fort Atkinson brine freezer, Gaulin ho-izer, Sharples and De Laval emulsors; Mojonnie run tester; Sealright packaging machine; two Baker ice machines together with adequate refrigeration rooms.

Demonstrations and discussions will begin Monday, February 19, at one o'clock and will continue Saturday noon. New problems will be discussed each session covering: Standardization of the ice cream mix; ingredients, kinds and qualities; ripening; freezing the mix; operation of refrigerating systems; problems involved; manufacturing record forms; how to keep books; cost accounting; arrangement of plant; simple dairy bacteriology, condensed milk; how to make and use it along with any other questions that may come up.

A comparative scoring of ice cream brought by those interested will be carried on. Officials point out that this will be a good way to check up the quality as per cent of fat, solids and bacteria count will be made on each sample.

Details and directions for bringing samples may be gained by writing the Department of Dairy Husbandry, College of Agriculture, Lincoln, Neb.

MINNESOTA MANUFACTURERS MEET IN JANUARY.

The annual convention of the Minnesota State Association of Ice Cream Manufacturers will be held in St. Paul, January 10 and 11, according to announcement by Secretary J. J. Farrell, 620 Hamm Building, St. Paul. Hotel St. Paul will be convention headquarters.

A tentative program has been announced. The convention will open at 2 o'clock Thursday afternoon, January 10. The secretary says addresses by prominent men in the industry will follow. A banquet will be served at 6:30 the first evening of the convention.

The second session will be held at 2 o'clock the following afternoon. A supper and smoker have been arranged for Friday evening by the supplymen affiliated with the association.

COMPETITORS.

Two little English girls were quarreling over the success of their fathers.

"My father can preach better than yours, bishop," said the first.

The second little girl could not answer her back, she suddenly recovered and said: "Well, anyway, my father got a hen in our yard which lays an egg every day."

"That's nothing," said the bishop's daughter. "My father lays a cornerstone every week."—Van Nuys Vanguard.

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Spread in Cost Between Brick and Bulk in Ice Cream

By N. J. DESSERT*

FROM time to time we have received information in regard to the differential between bulk and brick ice cream charged by different manufacturers. It has always been interesting to note how these figures varied. For instance, in a list which I have before me now, covering fifty cities, the differential runs from fifty cents a gallon down to nothing at all. In New Jersey a manufacturer is selling his product at \$1.52 per gallon all the way through. Down in Louisville, Ky., there is a straight price of ninety cents. In Fort Wayne, Ind., brick is sold at the same price as flavors. A manufacturer in North Adams, Mass., gets fifty cents more for his brick and charges the same for bulk flavors and vanilla, \$1.10. In Rochester, N. Y., this list gives a price of \$1.75 on brick against \$1.40 on flavors. In Tulsa, Okla., the brick price is \$1.60 against \$1.15 on flavors.

The Detroit Creamery has always figured that thirty cents a gallon was the correct differential on brick cream. I am speaking, of course, of the difference between the price we get for bulk colors (chocolate and strawberry) as against our brick of assorted flavors.

This subject, as I said before, has not only been interesting from a comparative standpoint, but it has, especially during the last few years, created considerable discussion in the trade. I have talked it over several times with our secretary, Mr. Loewenstein, and at the last national ice cream exposition I told him that I would prepare a set of figures showing how we arrived at the thirty cents differential on brick cream. In compiling these sheets and carefully checking over every item it proved that we were right in our contention. It also brought to light a condition heretofore unknown to us and which I think will prove very interesting to you gentlemen as an instance of how very careful a manufacturer must be with every detail affecting the cost of his product. I will tell you the story later on.

Actual Figures.

Getting down to figures, I will say that the information that I am presenting today is taken from our books for the first seven months of this year—January to July, inclusive.

The cost of labor in manufacturing bricks is .0407 per gallon. The cost of supplies is .0521. Difference in delivery is .1789. Shrinkage, .0313. Total difference, .3030.

*Detroit Creamery. An address before annual convention of National Association of Ice Cream Manufacturers, Cleveland, O., Oct. 24, 1923.

They cut the long costs out of short hauls—

WRITE FOR BOOKLET THAT TELLS HOW

C-T

Commercial Truck Co.
PHILADELPHIA

ELECTRIC TRUCKS

½, ¾, 1, 2, 3½ and 5-TON CAPACITIES

The difference in cost of **delivery** of bulk and brick ice cream is estimated on the basis that it takes as much ice and salt, space and time to deliver three gallons of brick as five gallons of bulk cream.

You gentlemen are all familiar with what constitutes labor costs on brick cream, but anyway I will mention that our charges include operating Mojonmier brick machines, lining cartons with parchment, filling slabs by hand, cutting hand-filled slabs into pints and quarts, wrapping hand-made bricks, also cutting bricks individually for push carts.

The item of supplies includes cartons, wrappers, rubber bands, cardboard circles and miscellaneous supplies used in operation.

I mentioned "shrinkage" costing us three cents a gallon. This is the item I wish to call particular attention to. You have all heard the old adage that "small leaks will sink a great ship." Now in this case the small leak did not sink a great ship because we plugged it up in time. But just the same that small leak cost us over \$900.00 in the month of July alone. In other words, we lost something over three cents a gallon on 32,000 gallons of brick ice cream. Here is how it happened:

How It Happened.

We have been using cartons which were made to take hand-made bricks. You must make some allowance for the irregularity of cutting hand-made bricks. The cartons must be a trifle large because sometimes the bricks are not sliced perfectly straight. I don't want to bore you gentlemen with figures but when this matter of over-run or shrinkage was brought to my attention, I determined to dig right down to the bottom of the case and see what was wrong. And here it is in figures:

The standard quart carton contains 57.75 cubic inches of space. The carton we were using measured 3½x2 11/16 by 6 9/16 inches, or 61.73 cubic inches. The difference, practically 4 cubic inches on a quart carton, is what caused that shrinkage—it made our brick ice cream cost more than three cents a gallon above what it would have cost had we thought of it in time that the old carton for hand-cut brick was larger than it should be for a Mojonmier filled brick. Now we are having cartons made which measure 3½x2¾x6½ inches, or 58.09 cubic inches. This is just a trifle larger than the standard carton (57.75 cubic inches) but we are making allowance for the parchment lining.

I have here all the figures in detail showing how we arrive at the thirty cents differential on brick ice cream, and if any of you gentlemen would like to see them or make any further inquiries on the subject, please consider that the privilege is already granted.

It has occurred to me that you might be interested in knowing something about our brick business from a merchandising standpoint. Several years ago we began putting out a special brick each week. It seemed to us that the people might grow tired of the same old "Neapolitan" brick and so we figure out a schedule for three months in advance, with different flavors each week. The idea has gone over big and we have made some remarkable sales records when fresh fruit specials were offered. All of our brick dealers are supplied with advertising display cards, showing the flavors for each week. These cards are sent out by mail one month in advance. Naturally we have extra choice flavors for holidays, and these are usually advertised in the newspapers as well as by the dealers.

Truck Operating Costs

By BEN. H. PETTY*

REAMS of perfectly good paper have been wasted in the printing of columns of so-called cost data which is not only very inaccurate, but dangerously misleading because many operators, new to the game, will seize upon this data as a basis for expansion of their trucking activities only to discover its inaccuracy after some very costly experience.

The sources of error in this cost data are many and

PROF. BEN H. PETTY.

varied. As an example, operating costs have been broadcast as authentic based on cost systems which omitted such important items as depreciation, overhead and garage rental. Naturally the costs of operating different sized trucks figured on such a basis would be very low. We are liable to be frequently misled in considering costs per mile or costs per unit mile unless the exact operating conditions in question are stated fully. For instance, it is quite obvious that with two trucks of the same type, size, loading, etc., one operating on long hauls with few stops, the other on short hauls with many stops, the former should show considerably lower operating costs. The type of road surfacing operated over, weather conditions, climate, season of year, time period covered, age of trucks, etc., all have their direct influence on costs of operation and should all have careful consideration when comparing one truck with another. Most comparisons of operating costs are meaningless due to the fact that the trucks in question are operating under entirely different conditions.

During the school year of 1921-22, I spent considerable time in gathering and analyzing data to be used in a bulletin on truck operating costs. I was simply amazed by the dearth of dependable data of this type. It is really surprising that there are so many men in

classes of business which necessitate the use of motor trucks, who keep the most detained records of conducting all other departments of the business, but are absolutely at sea as regards costs in delivery end. Thousands of trucks have been sold, out and relegated to the scrap heap on which absolutely no operating costs were ever recorded. One owner of a fleet of about fifteen trucks engaged in general trucking frankly informed me that he possessed absolutely no record of the cost of operating his various trucks and that he simply determined his annual profits by subtracting his yearly expenses with his gross receipts. No doubt this mathematical result is frequently a quantity. At any rate his annual profit could be greatly increased if he possessed an accurate record of costs covering each individual truck by which he could fully analyze his business and plug up the leaks otherwise would be indeterminate.

The value of accurate operating cost records comes readily apparent when one realizes that by intelligent analysis the owner is enabled:

1. To compare one truck with another as to performance and itemized costs, thus determining which unit, size and type of truck is best suited to his particular trucking conditions.
2. To decide which drivers are giving best service by checking them on repair costs, gasoline consumption, etc.
3. To pick out types of trucks that are making most profit.
4. To prove where it is cheaper to ship by truck than by rail.

There are many other advantages to be gained from accurate records of delivery costs which apply to particular types of business.

Items Considered in a Cost System.

Obviously it is impossible correctly to estimate the cost of operating a truck unless all of the factors which go to make up the total cost are included. These costs come under two general headings, namely, fixed and variable costs, which are again usually subdivided as follows:

I. Fixed costs:

1. Depreciation (if on age basis).
2. Interest on investment.
3. Insurance.
4. Taxes.
5. License fees.
6. Garage rent.
7. Overhead (administrating).

II. Variable costs:

8. Depreciation (if on mileage basis).
9. Drivers' wages.
10. Gasoline or electric current.
11. Lubricants.
12. Tires.
13. Repairs and overhaul.

Under fixed costs are included all of those costs which go on regardless of whether or not the truck is used.

in actual operation. These are usually figured on a yearly basis, but can easily be reduced to a monthly or daily basis if so desired. It should be noted, however, that the daily fixed cost will vary with the number of days of the year that the truck is actually operated.

Variable costs are those which vary with the number of miles operated. When the truck is not being operated there are no costs under this general heading. Being figured on a mileage basis, it is obvious that these costs increase as the mileage increases.

Many large operators maintain a more elaborate system of accounting with the major items itemized in detail. The above outline covers the necessary cost data, however, and is not so elaborate as to discourage use by the smaller operator.

I. Fixed Costs.

(1) Depreciation.

This is an item that is frequently neglected in cost estimates and yet it is one of the largest single items in the operating cost. It is just as much an operating cost of the truck as the cost of gasoline, oil, etc. The only difference is that the cost of fuel and oil are immediate, while depreciation expense is extended over a considerable period of time. The term sinking-fund is sometimes used instead of depreciation, since the depreciation charge is really a sinking-fund to be placed in reserve so that at the end of the life of the truck a sufficient sum will have accumulated to replace the old truck with a new one.

Depreciation charges should be based on the total investment in the truck (including cost of chassis, body, top, painting, freight, special equipment, etc.) minus the tire value. The tire expense is figured under variable costs since the tire life varies with the mileage.

There are some who argue that a certain re-sale or salvage value should be allowed on a truck and, therefore, the depreciation should be based on the original investment minus this salvage value. Theoretically this is correct; however, due to the great variation in the salvage value of trucks at the end of their assumed lives, it is very difficult to fix a proper value beforehand. It appears to be a safer method to figure the

depreciation on the original investment and thus avoid the difficulties involved in fixing a suitable salvage value, but if the analysis of operating costs is made up after the truck has completed its useful life, then the salvage value should of course be considered.

Depreciation is figured in different ways, the principal methods being by the "age basis" and the "mileage basis." In the first case, the truck is assumed to have a life of a certain number of years and a portion of the cost of the machine is charged as depreciation each year. For instance, a truck costing \$3,000 is assumed to have a useful life of five years, then the depreciation charge each year will be one-fifth of the original cost or \$600.

In figuring depreciation on the "mileage basis" the truck is assumed to have a useful life of a certain number of miles. Then the monthly or yearly depreciation is computed on the basis of the miles traveled in a period. A useful life of 60,000 miles for the truck mentioned above would give a depreciation cost of \$50 for each mile operated. If the truck traveled 10,000 miles the first year the depreciation charge for that particular year would be \$500.

The conditions under which the truck has been used will be operated must be taken into consideration in setting the estimated life. A truck in one kind of service may run 100,000 miles, while in another kind of service the same truck may not last 25,000 miles. Since the assumption of the useful life of the truck is the source of considerable error, there seems to be no argument for the finer calculations that are sometimes used in distributing the depreciation.

If the assumed useful life of the truck has been established at less than the actual life, costs during the remaining life of the truck will not include interest on depreciation charges and, therefore cannot fairly be compared with the former costs until proper adjustment has been made. This situation may arise in any method of computing depreciation.

Those who use the "age basis" point out that a truck depreciates to a certain extent whether it is operating or not, also it is easier to distribute depreciation charges in this method.

The supporters of the "mileage basis" argue

EXECUTIVE OFFICES

September 23rd, 1922.

C. E. Rogers & Sons,
Detroit, Mich.

Gentlemen:

We take pleasure in saying that the Rogers condensing pan installed in our new Wellington plant is a great improvement over the pans heretofore used. We find that we can boil at a lower temperature with water at a higher temperature, and with less entrainment loss than has been our experience with other pans. The pan also has a decidedly greater capacity. We are very glad in this way to express our satisfaction with this installation.

Yours very truly,

THE TELLING-BELLE VERNON COMPANY.

146 MERRITT STREET
Oshkosh, Wis.

the re-sale value of a truck is usually based on the general condition and the total mileage covered, therefore it is logical to compute depreciation on the mileage basis. The operator simply estimates the life of a truck from past performance of similar trucks under similar service conditions and makes his depreciation part of his daily variable operating cost.

There is frequently a great variation in the life of similar trucks in similar service and, therefore, it is rather difficult to estimate a truck's life beforehand. A truck in the hands of one driver may be a pile of junk inside of a year. On the other hand, a competent driver might extend its useful life over a period of five years to ten years.

(2) Interest on investment.

Various methods are used in figuring interest charges. One of the most common methods is a straight interest charge on the entire investment covering the whole life of the truck. Take for instance a \$3,000 truck with an assumed useful life of 5 years. With an interest rate of 6 per cent the yearly interest charge would be \$180 and the total interest for the five year life of the truck would be \$900.

PRESIDENT COOLIDGE THANKS ICE CREAM MEN.

Ice cream manufacturers of Cleveland, seeking to honor their industry on the occasion of its joint National Convention and Exposition, held in Cleveland, October 22-27, inclusive, sent by express a special packer containing special bricks of ice cream to President Coolidge in Washington, a service man accompanying the shipment to keep it properly refrigerated.

News dispatches from Washington announced to the entire country the receipt of the ice cream on Tuesday, October 23, in time for the president's evening dinner. The same evening in Cleveland, 1,500 members of the National Association of Ice Cream Manufacturers and of The Association of Ice Cream Supply Men were dining at the annual banquet of the first named organization.

The following day the secretary to the president, C. Bascom Slemp, addressed to the ice cream manufacturers of Cleveland, in care of Harry G. Dean, their secretary, the following acknowledgment in behalf of the president:

"The president has asked me to express through you to the ice cream manufacturers in session in Cleveland his sincere thanks for their remembrance of him and for the courtesy which they have shown to him. The ice cream proved to be delicious, as might have been expected.

Virtually every daily newspaper of any consequence in the United States carried the news of the receipt of the special packer of ice cream at the White House.

TRUCK OPERATING COSTS.

(Continued from page 94)

Perhaps a better method is to make allowance for interest secured from the sinking fund by deducting the accumulated sinking fund from the total interest each year and computing interest charges on remainder. To illustrate, take the same \$3,000 truck mentioned above and figure the depreciation on the basis allowing a life of five years. The depreciation and interest at 6 per cent would be as shown in following table:

Table No. 1—Interest Table.

Depreciation	Interest on	Interest Charge
\$ 600	\$3,000	\$180
600	2,400	144
600	1,800	108
600	1,200	72
600	600	36

5 years..... \$3,000 \$540
 By this method the interest charges decrease each year due to the compensating effect of the accrued interest from the sinking fund (depreciation charge). If desired to charge off this total interest in equal yearly increments, it can be easily done by using the following formula:

$$\frac{A + 1}{A} \times \frac{C \times B}{2}$$

which A=length of sinking fund period in years.
 B=the total investment (cost of truck).
 C=rate of interest.

In the example given, the formula would work out as follows:

$$\text{Average yearly interest} = \frac{5+1}{5} \times \frac{.06 \times 3000}{2} = \$108$$

The total interest over the five year life of the truck would be $5 \times \$108 = \540 , the same as shown in the above table.

In cases where it is desirable to secure monthly operating costs, the depreciation can be charged off at the rate of each month and interest computed on the balance.

Insurance.

Insurance covering liability, property damage, fire and theft should always be considered in arriving at operating costs under this item. This should be charged off the truck whether the owner is actually carrying insurance or not, for if he does not insure his truck he must carry the risk himself in the place of the insurance company.

Taxes.

A explanation is necessary on this item of cost. Regular or special tax on the motor truck should be included under this item.

License Fees.

License fees vary greatly in different states and for different truck capacities. In some states both city and state license fees must be paid. License fees for drivers are necessary in some states and should be included. License fees are on a yearly basis and are obviously a part of the fixed operating costs.

Garage Rent.

If the operator rents a garage, the charges under this item will be the garage rental. But if he owns his own garage, the garage charge will include the following items: interest on garage investment, depreciation, real estate taxes and insurance.

This item is frequently a source of error, as many operators who use their own garages fail to record any operating charges under this item. The expense is there in the form of interest, depreciation, taxes and insurance and must be recorded just the same as rental for

Way down South in Dixie

SOUTHERN ice cream manufacturers are getting ready to pack up their troubles in their old kit-bag and travel over to Little Rock, where the eleventh annual convention of the Southern association will be held December 4, 5 and 6. The coming convention has attracted the interest of manufacturers in all parts of the country, for, though only the Southern industry is directly involved, manufacturers throughout the country feel a keen interest in the association that has grown to be the second largest in the industry, ranking next to the national body.

The Southern convention is one of great importance to the manufacturers of Dixie. It seems sure that every section of the South will be represented. Men of other sections, of course, will content themselves with their state conventions, but the eyes of the entire industry will be turned upon that delightful little "city of roses" where one of the most important conventions of the years will be held—important not only to the men of Dixie who will go to discuss their problems, but important to the industry as a whole.

Your convention will be watched with great national interest, gentlemen of Dixie. The ice cream industry expects you to do yourself proud. In this great undertaking your association officers expect every man to do his duty. You will be sure not to let anything keep you away from Little Rock at that time. You just can't stay away and keep faith with the men who are expecting you to make things safe for Dixie's ice cream expansion.

SPECIAL work aside from regular convention matters faces the Southern association at the Little Rock convention. In addition to its own business matters, the association has to bear in mind the fact that in 1924 it will be host to the national association, which will meet in New Orleans next year.

This will be the first time that the national association has ever gone South. Another precedent was when it elected a Southern vice-president, W. W. Campbell being the first Southerner ever to hold office in the national body.

The decision of the national association brings up again much speculation as to the Southern association's plans for next year's convention. Other cities have been clamoring for the Dixie body to meet with them. It would appear that the logical thing for the association to do would be to meet in New Orleans again in connection with the national convention. The association already has held five conventions in New Orleans, in

addition to the organization meeting held there in 1919 and it was only a year ago that the last convention was held in the Crescent City. But with the manufacturers of the whole nation as their guests, the association naturally will wish to be as well prepared as possible to give a proper reception to their visitors. It is not at all unlikely that the next Southern convention will be held in New Orleans.

OUR friend M. J. Costa, that redoubtable Georgian who has done so much for organization in the ice cream industry, will finish a singularly successful term of office at Little Rock. Having made a success of his organization efforts in Georgia, where the co-operative spirit now is very highly developed, Mr. Costa took the leadership of the Southern association at the past convention. His has been a very inspiring personality during the past year.

Mr. Costa is one of the outstanding men of the industry, not only in the South, but of the whole country. He is a man of force, with an intimate insight into industry problems.

The association this year may take up the job of retiring Mr. Costa and finding a successor. W. J. Barr of Tampa, Fla., probably will be the next president. Mr. Barritt has served as vice-president during the past year. He is one of the Southern industry's able members.

For a vice-president a number of manufacturers already are mentioning the name of S. N. Sutton, Vice-President of the Mississippi Ice Cream Manufacturers' Association.

There is good official timber for the association.

GOING to press early this month to feature the eleventh Southern convention makes it necessary for us to wait until next month to publish accounts of the conventions of the Texas Ice Cream Manufacturers' Association and the Oklahoma Association of the Ice Cream Industry. These conventions will be features of the January issue, as also will the West Virginia convention.

After arrangements had been made to print in the Ice Cream Review a stenographic report of the Texas convention, as was done last year, Secretary A. J. W. of that association wrote The Ice Cream Review in regard to how much his members appreciate this co-operation, writing in part as follows:

"As to the appreciation on the part of the members of the association for what you are doing, there is no doubt that they are very grateful to you."

SOUTHERN MANUFACTURERS DISCUSS COMING CONVENTION

Veteran Members Believe Little Rock Convention will be one of Great Importance
to Southern Industry

NEXT to the national convention, the Southern stands pre-eminent. Ninety-five per cent of the manufacturers of the South are members. Our association has filled a particular niche, as it serves directly its members, and is particularly well equipped to cater to their requirements. I wish I had the time and space to tell your readers what very fine work the officers of the Southern Association have done for its members.

Little Rock, situated as it is in the Southwest, is very accessible, has splendid hotel accommodations, and will render every facility to make those comfortable who may attend. This coming meeting should draw quite a number from states outside the Southern association, and I know all of the old guard will be there.

A program is being arranged that will fit in with Southern conditions and will be just as interesting to the small manufacturer as it is to the large.

Harmony has always prevailed at our meetings. Our association is very much like a large family where the members can get together, sit down and discuss things frankly. Considerable time is to be given over to this sort of thing which will afford a great opportunity for the members to become better acquainted. A man is sure to find his old friends at Little Rock and will have the opportunity of making new ones.

From a financial standpoint of a Southern ice cream manufacturer this meeting is something he cannot afford to miss. It will put him in touch with his competitor, the very fellow that he should know better, and at the same time he has a chance to rub shoulders with the leaders in the industry. I can not urge too strongly a large attendance.

Yours very truly,

BENJAMIN C. BROWN,
New Orleans.

* * *

D. S. COX LOOKS FORWARD TO GOOD CONVENTION.

I wish to say that the writer always looks forward to a meeting of the Southern Ice Cream Association each year with great pleasure. It brings me in personal contact with men in the same line of business, thereby giving an opportunity to discuss and exchange ideas which is beneficial to everyone attending the meeting. I firmly believe that the association has been a medium through which a closer relationship has been built between the manufacturers and our good friends, the Suppliers, who always seem to take a keen interest in our development.

With very best wishes from the writer and sincerely hoping that I will have the pleasure of seeing you in Little Rock in December.

Yours very truly,

D. S. COX,
Columbus, Miss.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

ALABAMIAN SAYS IT'S HIS DUTY TO GO.

I am planning to attend the convention at Little Rock, Dec. 4, 5 and 6, because I think every ice cream man who possibly can should attend this convention.

It will afford an opportunity for all who go to meet and get acquainted with the big men of the ice cream trade and in addition will learn the latest methods of manufacturing as well as distributing ice cream creamery products.

If we are to succeed in the South, we must co-operate and keep up to date in this the coming industry. There is no better way to do this than to attend the conventions and hear the methods discussed.

Yours truly,

J. I. PERRY,
Tuscaloosa.

* * *

ARKANSAS' PRESIDENT EXPECTING LOTS OF VISITORS.

The Southern Association of Ice Cream Manufacturers, which meets at Little Rock, December 4, 5, 6, is making preparations for the large crowd which they reasonably expect. As president of the Arkansas association, I want to urge every manufacturer in the South to "knock off" for three days and attend.

Preparations for entertainment are being pushed rapidly, both by Mr. Clopton of the Southern, and Mr. Miller of the Dixie Flyers. This combination is hard to beat and you may expect, and will have, a rough good time, aside from the benefit of seeing on display the equipment and products of all the manufacturers who call on us in the South.

Bring the wife with you. She needs a vacation, and the Ladies' Auxiliary will see to it that she enjoys every moment of her stay in Little Rock.

Yours truly,

E. A. WATSON,
President Arkansas Ice Cream Manufacturers' Association.

* * *

MISS MARY KATE EXPECTS "BESTEST TIME"

There are so many reasons why every Dixie ice cream manufacturer should attend the Southern convention at Little Rock, it would indeed be hard to point out the most important one.

As for me, I just have the "bestest" time of my young life. There are so many things of real interest discussed at the business meetings, which, if absorbed, will be very beneficial throughout the coming year. However, I always leave that for the brainy men of the convention, as my little fat head can't be bothered with too much business.

The "social functions" appeal to me most, and when the time draws near, I can hardly wait for that open dance given by the Dixie Flyers. Those boys are the

Arkansas Rapidly Developing in Dairying

Will Terry, one of South's Organization Leaders,
Operates Model Dairy Plant

THE Southern Association of Ice Cream Manufacturers will meet this month in a state that is rapidly forging to the front in the development of the dairy industry of Arkansas, and with manufacturers who are among the leaders in the ice cream industry.

One of the most prominent ice cream manufacturers in ice cream organization work is Will Terry of Little

WILL TERRY.

Rock. He has for a number of years been identified with the Dixie organizations, serving for several terms as president of the Arkansas association.

Another striking co-incidence is that Mr. Terry embarked in the ice cream industry the same year that the Southern Association was formed, in 1912, and since that time the Terry Dairy Co. has kept pace with the development of the dairy industry in his state and Mr. Terry himself has kept pace with the leading ice cream manufacturers of the South, both

in viewpoint of plant efficiency and in boosting the spirit of co-operation.

We are fortunate in having material concerning the Terry Dairy Co. at a time when Southern manufacturers are thinking of their visit to his state.

This plant is modern in every respect. The quality of its products is known throughout the state. Terry's ice cream is shipped to most of the towns in Arkansas. The company also operates 18 milk routes in Little Rock. He supplies milk, butter and ice cream to the principal hotels, cafes, grocers and markets of the city. About 700 farmers of Arkansas ship cream to this plant.

Seventy-five men are employed in the plant, many of them having been with the company for several years, and are thoroughly experienced in dairying. The company owns and operates its own farm. The farm has large, modern barns, complying with every requirement of sanitation. It is well stocked with thoroughbred Holstein cattle.

Will Terry is president of the company; Seymour Summerfield is secretary; G. W. Kump is treasurer; E. Beeson, auditor, and George Banzhof, superintendent.

Ladies' Auxiliary to S. A. I. C. M. and Other Organizations

"LAST CALL FOR LITTLE ROCK."

November 12, 1923

Dear Ladies:

There is only a few weeks left before the Southern Ice Cream Manufacturers' Convention, December 4 and 6, at Hotel Marion, Little Rock, Ark. **Are you going to be there?**

We hope all the ladies who were in New Orleans last year will be with us in Little Rock, also trust that we will have many, many new members join us. There are so many nice times being planned for us by the Southern Association and the Dixie Flyers that I urge you to be sure and come, if you don't you will regret it. The Ladies Auxiliary will have their Luncheon on December 4, the first day of the convention, all get acquainted and the remaining days will be joyful ones.

The Ladies Auxiliary to the Dixie Flyers is the largest of its kind in the ice cream industry and if you will attend and bring as many lady friends as possible our Little Rock convention will be 100 per cent for attendance.

Anticipating the pleasure of seeing you all in Little Rock, I am

Sincerely yours,

SALLY H. MAHONEY

President Ladies Auxiliary to D.

VIRGINIA AND TENNESSEE MANUFACTURERS' MEET.

Optimism prevailed at a get-together meeting of ice cream manufacturers of the vicinity of Bristol, Va., Tenn., held in that city November 13. The impression was that 1924 would be a "big year" for the industry in their section. Virtually every manufacturer present expressed satisfaction over business done in the past twelve months.

You can't afford to miss a single copy of The Ice Cream Review. Did you send in your renewal?

Manufacturers of the famous Mojonnier Tester, Overrun Tester and Vacuum Pans.

"That fellow used to wreck ice cream plants"

SOME of the older ice cream manufacturers remember their troubles with liquid milk—the uncertainties of delivery, the loss of trade because the "watery" grade of milk supplied resulted in a poor product, the expense of handling a lot of cans and the loss of profit when a sudden lull in orders left a quantity of milk standing around to sour or spoil.

Even some of the present generation cling to the old ways but the majority of successful plants use Merrell-Soule Powdered Skimmed Milk—

Because:

1. It is of absolutely uniform grade—allowing you to gain the business which comes when you can guarantee the quality of your ice cream.
2. It can be ordered as conveniently as sugar or salt and keeps without ice in the store room.
3. It can be mixed for use in whatever amount your needs require. You get your full profit from a sudden demand and lose nothing when a sudden lull stops orders.
4. Saves handling of cans and requires less sanitation costs.

It will pay you to investigate the advantages of

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

DIXIE MAIL BAG

One thing that I have noticed in particular during my short stay in the south. That is the difference in the quality of ice cream being manufactured. The last three years has seen a marked improvement. I believe the ice cream being made today in Dixie is on a par with that made in any other section of the country. I attribute a large percentage of this improvement in quality to the information being published in your papers.

Everybody reports a good season and the tourists are pouring into Florida fast and furious. The Florida manufacturers are looking forward to the biggest winter business they have ever had.

Think it sure would be great if the Imperial Association of "Yallar Dogs" could get together before the Carolina convention.

ROY S. JENNINGS,

Creamery Package Manufacturing Co., Atlanta, Ga.

* * *

PRAISES OKLAHOMA CONVENTION PUBLICITY

You should be commended upon your interest in making the Oklahoma convention a success. I think that the most good derived from conventions of this kind—in fact, all conventions where men meet with the view in mind of building up an industry not only from

the selfish standpoint but for the betterment of the consuming public is the realization of the part they play in the economic system of our civilization and to learn to know one another.

When we begin to know a person his ideals and in life we find that he is a great deal like ourselves, despite the seemingly bad points in his character there are many good points. It is hard to hate a man until we once learn to know him. To sum the whole thing up in a few words a convention gives us a chance to know other fellow men and builds up the greatest thing of all—confidence.

Director, Oklahoma Association

Ice Cream Manufacturers

EARLY R. CASS,

Tulsa Okla.

* * *

WANTS TO SEE NATIONAL CO-OPERATION

I feel those of us who were fortunate enough to attend the national convention should attend the south in a body and endeavor to impress on those who do not present the extreme importance of national co-operation of all ice cream manufacturers. Personally I like to mention Northern and Southern associations and would like to see the time come when there will be two divisions, that of the individual states and national. I believe this is the only way that the ice cream manufacturers will be able to realize fully the cumulative effect of coordinated effort.

The old idea of North and South in our national life is rapidly passing and today is only reflecting a few sparks of the last dying embers of the Old South and may God speed the day when there will be no reference to North and South, but just one big fair composed of the various states that meet either North or South at some convenient point each year mingling with each other in the spirit of good fellowship.

Sincerely yours,

CHARLES E. LANDRETH, Pres.

North Carolina Ice Cream Manufacturers' Association

OHIO MANUFACTURERS TO CONVENE IN JANUARY

Dates for the annual meeting of the Ohio Association of Ice Cream Manufacturers have been set at January 31 and February 1, according to announcement by A. Wentworth, Columbus, general secretary of the Association of Dairy Products Manufacturers, of which the ice cream body is a division.

The Deshler Hotel will be convention headquarters. Secretary Wentworth expects a large attendance. The Ohio association is one of the most aggressive in the industry. Its conventions for the past several years have attracted numbers of delegates and have been marked with enthusiasm.

It seems sure that the coming convention will up to the standard, officials say, and every member is assured of an interesting business program and plenty of recreation features. Ohio manufacturers not affiliated have been invited to write the secretary and make arrangements to attend the convention. A welcome is extended to all, the secretary says.

Glacifer Shipping Packers

require no ice or salt

An insulated packer with a dry method of refrigeration.

A saving of 20% to 50% in Express rates

Made in 3 gal. and 5 gal. sizes for either bulk, brick, or packaged ice cream. Smaller packages for catering.

Glacifer dry disc system will keep ice cream in dealer's cabinet for 24 to 36 hours without ice or salt.

Did you see it in service at Cleveland? If not, write for circular.

Christmas 1923

With the approach of Christmas and its spirit of peace and good fellowship it is with the utmost pleasure and sincerity that we join the many friends of the

in wishes for success, prosperity and hearty good will.

¶ This year has been exceptional in its opportunities for "honest to goodness" service to humanity. ¶ The realization of this fact not only brings the highest reward, but is also a definite incentive to greater effort and larger success. ¶ To one and all we wish this realization and in the year so soon to come, we hope that your prosperity will eclipse all previous experiences.

ANNOUNCEMENT

Manufacturas de Corcho, Palafrugell, Spain

have now completed their new plant, which will have a monthly capacity of 2,500,000 sq. ft. board measure of

NON-PLUS-ULTRA PURE CORKBOARD

This is triple the output of their former plant. And to adequately take care of this increased volume, the Cork Import Corporation was organized, with large financial resources, to take over the sale of Non-Plus-Ultra Corkboard heretofore handled by the Junius H. Stone Corpn.

There will be no material change in the executive personnel, and Mr. Junius H. Stone will continue to handle the sales end of the business. Mr. Stone produced the first commercial sheet of corkboard manufactured in this country and has furnished the insulation for many of the biggest cold storage plants of all kinds.

The policy of working with and through building contractors, as far as possible, will be maintained.

It will be our policy to carry in stock in our New York warehouse for immediate shipment a stock of 2,000,000 sq. ft. of corkboard.

We assure the customers and friends of the Junius H. Stone Corpn. that they will receive even better service than heretofore by reason of our larger output and large reserve stock.

We are ready to make interesting quotations on your requirements.

KENTUCKY ASSOCIATION ACTIVE.

Since the organization of the body late last summer annual meetings of the Dairy Products Association of Kentucky have been held to discuss dairy problems in that state. As this is written, members of the association are preparing to attend at Louisville, Watterson Hotel, November 15.

C. G. VAHLKAMP.

Officers of the association, which comprises ice cream manufacturers, creamerymen and milk plant operators, are highly encouraged over the outlook for useful work through the association. The Officers are: president, Charles G. Vahlkamp, Paducah; treasurer, C. O. Ewing, Louisville; general secretary, Carlton Ball, 206 Republic Building, Louisville; vice president of ice cream division,

Kloecker, Lexington; vice-president creamery division, E. Yoder, Lexington; vice president milk division, George Schneider, Louisville; secretary of ice cream division, W. A. Heuser, Louisville; secretary creamery division, W. A. Horneman, Louisville; secretary milk division, Harold Neel, Louisville.

CAROLINIANS ANNOUNCE ENTERTAINMENT PROGRAM.

Plans are going forward under the direction of committees and association officials for the annual convention of the North Carolina Ice Cream Manufacturers' Association, which will be held at Winston-Salem, January 15 and 16.

Entertainment plans, for which the Carolina association is famous, were laid at a meeting of the entertainment committee at Greensboro, November 7.

It was decided to hold the annual banquet the first evening of the convention instead of the last, for the reason that many delegates in the past have been unable to remain over for the banquet at the close of the convention. The second night will be taken up with a visit to the Neil O'Brien minstrel. The Carolinians' old friend, Elmer Swer, formerly of the Al. G. Field's minstrel, will appear with Neil O'Brien in some sparkling entertainment.

A dinner dance will be a new feature of the annual banquet.

A copy of the entire program will be announced in the following issue of The Ice Cream Review. President Charles E. Landreth is sure that his members will enjoy the visit to his home-town, Winston-Salem. Secretary J. L. Dixon of Fayetteville, says a large attendance is expected.

Post-Exposition Reflections and Summaries

Educational Exhibits Featured Show—Supplymen Well Pleased With Results—President Hoyey Lauds Exposition

THE second national exposition of The Association of Ice Cream Supply Men and the twenty-third annual convention of the National Association of Ice Cream Manufacturers have passed into history.

And each will go down in the industry's history as the biggest ever held—in point of attendance, interest, size and entertainment.

Cleveland's hospitality again marked the Fifth City as an ideal place in which to hold an exposition and convention and from the time the van guard of delegates the visitors arrived until the close of the exposition on October 27th everyone was kept busy.

With 200 booths, including 175 separate exhibits, the exposition occupied a space 40 per cent greater than that of the previous year. Held in Cleveland's new \$6,500,000 Public Auditorium, the exposition required both floors for displays, utilizing a total of 65,000 square feet and it established itself as among the first half dozen trade shows of the country, catering to a single industry, both in size and attendance.

Machinery, equipment and supplies of every description used in the industry were on display, the total actual value of the exhibits being placed at \$300,000. The total registration at the show was around the 4,000

mark, Robert Everett, Secretary of The Association of Ice Cream Supply Men, announced.

At the convention, held in Hotel Cleveland, it surpassed expectations, with a record breaking attendance. The program was an unusually interesting, as well as profitable, one.

* * *

TOTAL REGISTRATION 4,156.

The total registration at the second national exposition of The Association of Ice Cream Supply Men was 4,156.

The exposition occupied nearly 65,000 square feet of the magnificent Public Hall, October 22 to 27 inclusive. It was held in conjunction with the 23rd annual convention of the National Association of Ice Cream Manufacturers.

Registration of persons directly representing ice cream manufacturing companies was 2,143, as compared to slightly less than 1,700 at the first national exposition held in the same building in 1922.

This registration included the names of ice cream manufacturers and their representatives from 41 states and the provinces of Ontario and Quebec in Canada; St.

The Gearhart Sales Cabinet Company's Exhibit at the Cleveland Exposition.

holm, Sweden; Buenos Aires, Argentina; London, England; Honolulu, Hawaii, etc., etc., were represented.

Registration of exhibitors, both members and non-members of The Association of Ice Cream Supply Men and their various sales, service, laboratory and other representatives, reached 1,430.

* * *

There were 171 individual exhibits in the exposition, bringing the average number of representatives of each exhibitor to eight.

In addition to these two main groups of registration, passes of limited duration were issued to 530 representatives of commercial houses active on, or touching to some degree, the ice cream industry, as an expression of courtesy by The Association of Ice Cream Supply Men.

Then, in addition to these classifications of registration, 51 admissions were accorded to representatives of federal, state and local bureaus and departments, to educators, representatives of civic bodies, newspaper and periodical representatives from outside the ice cream industry, and to various representatives of other industries entirely, interested in observing the exposition arrangements perfected by The Association of Ice Cream Supply Men in the service of the manufacturing ice cream field.

The total registration of all groups at the first national exposition in 1922 was approximately 3,100. This year's registration represents an increase of about 25 per cent.

* * *

Delegates Pleased

Delegates declared that the convention accomplished more in the way of promoting and bettering the industry, through discussion of the manufacturers' problems

and of research work being conducted than any of gathering. President Hovey said he believed he voicing the sentiment of all visitors in saying that was the best convention, and the most educational position ever staged.

"The exposition was a credit to The Association of Ice Cream Supply Men," he declared. "Its educational features were numerous and illustrative of the work the supply men's organization is doing towards general advancement of the industry."

Among the notable exhibits which attracted attention of the exposition visitors were those of the division of the United States Department of Agriculture; the University of Illinois department of dairy husbandry; the joint exhibit of the Ohio State University, the State Board of Agriculture; and the Edible Gelatin Manufacturers of America, Inc.

The federal government's exhibits consisted of showing the effect of homogenization on yield or overrun, physical effects of homogenization, effect of homogenization on palatability of ice cream, etc.

Educational charts were a part of the University of Illinois display. These charts were on "Kind and Amount of Milk Solids in Relation to Quality of Ice Cream," "The Condensation Process of Preparing Ice Cream Mix," "Comparison of the Use of Superheated and Superheated Condensed Skim Milk," "The Acidity Factor in the Ice Cream Making," and various others.

The necessity of educating people to the fact that ice cream is a food, in addition to its being a confection, was emphasized by the joint display of the Ohio State University and the Ohio State Board of Agriculture. The exhibits also stressed the importance of standardizing products and making ice cream uniform. An advertising device, operated electrically, flashed slogans as "Ice Cream is a Food," and "Make a Food of Ice Cream."

At the booth of the Edible Gelatine Manufacturers of America, Inc., the food values of gelatine in ice cream were explained. Literature, showing how experiments had proved that animals having gelatine as part of their food developed more rapidly than these without gelatine, was distributed.

The other booths of individual supply companies were attractively decorated, the Public Auditorium, fully erected, furnishing a rich background.

National Homogenizer

the Machine with the Revolving Head

The National Homogenizer is manufactured and backed by a million dollar corporation, builders of precision machinery for fifty years. It is the only machine that bears a perpetual guarantee.

Better Results!

In the history of the Dairy Industry there is occasionally brought on the market a new or improved machine which outdistances competition. The National Homogenizer, as exhibited at the National Dairy Show and the Ice Cream Convention at Cleveland, is such a machine and was pronounced by those who saw it as a triumph of engineering.

Better results, with less danger of tie-up because of worn out parts, can be obtained—a more satisfactory emulsion, creamier ice cream, etc.—by using the National Homogenizer and there are many good reasons why.

Chief among these is the revolving head which adds rolling and grinding to pressure. This makes clogging impossible; prevents the formation of radial grooves; and, with the three

graduated steps, insures a more perfect reduction of globules.

We guarantee this machine to produce a more perfect emulsion under less pressure and with less power consumption, than any other machine now on the market! Get all the facts. We shall be glad to send you a catalog and full information.

timore, Md., is the manufacturer of this tin flavor board, which is durable, cleanable, non-breakable, interchangeable, etc.

Representatives of the company in charge of the booth were Julius Reir, S. L. Love and C. A. Fethers.

* * *

The Gearhart sales cabinet is a refrigerator built in attractive cylinder form of sheet metal, insulated with three inch cork board and operates on a vacuum system. The Gearhart sales cabinet makes possible the satisfactory handling of sealed package ice cream. This cabinet was displayed at the national exposition by the Gearhart Sales Cabinet Co. of Clearfield, Pa., and a chart showing figures of what the cabinet did for one store proved interesting.

* * *

If you "took a tip from Zipp" at the national exhibition you would use only flavoring, extracts and fruits manufactured by the Zipp Manufacturing Company, Cleveland, Ohio. The company claims highest quality for 38 years and handled a complete line of flavors for the ice cream trade.

Those in attendance in the Zipp booth were John Zipp, president; F. L. Fisher, secretary-treasurer; of Cleveland, Ohio; L. B. Woods and C. J. Yunker of Toledo; O. M. Wells of Omaha, Neb.; F. H. Hyde of Rochester, N. Y.; L. A. Watson of Mentor, Ohio, and A. E. Henitselman of Akron, Ohio.

* * *

The Edison Storage Battery Co., Orange, N. J., displayed their all-steel alkaline battery for driving electric trucks. The feature of the exhibit was a large three position pabel showing the lighter weight of the Edison battery as compared to other makes. This lighter weight was translated into more pay load that the truck would carry. A tray of truck batteries was shown together with several cut pen cells showing the interior construction of this all steel battery.

All the electric trucks on display at the exhibition were equipped with Edison batteries.

Representing the company were G. E. Stringfellow, manager, T. E. Giblin, G. S. Towar, L. R. Lindsley and J. Mahaffey.

* * *

A. H. Barber Goodhue Co., Chicago, exhibited at Cleveland show, one 120-quart U. S. heavy duty motor ven freezer, with recording thermometer and signal light give notice to the operator that the ice cream has been frozen to the desired temperature. Officials say this thermostatic control is associated with an electric magnet, which also closes the brine valve at the same time. They state that this vice in connection with the batch weighing device, which actually weighs every batch, created much interest and favorable comment. It is claimed that it gives the ice cream manufacturer a definite means of controlling the definite uniformity of his product.

The company also exhibited a 300 gallon Elyria lined mixing and aging tank, No. 50 Titan cream separator, viscolizer, and electro-chemical cells for purchasing hypochlorites.

Representatives of the company were D. F. Wallace, H. Bonefeld, P. C. Barber and A. H. Barber.

* * *

Sealright liquid-tight paper containers, made in all sizes from the one-fourth pint sundae size to the one gallon size, excited interest at the Cleveland exposition.

One Sealright feature in particular—the Sealright one-fourth pint sundae size (2 1/2" dia.)—made a marked impression on the visiting manufacturers as a potential creator of volume sales, according to officials. The Sealright one-fourth pint size is claimed to have many advantages.

The Sealright one-fourth pint flat (3 3/8" dia. x 13/16")

A Section of the special mold storage cabinet in the De Haven Ice Cream Plant, Cincinnati, Ohio.

Soldered Ultra

Which Do You Prefer?

Solderless "Tinokeh"

FOR the first time you can get the facts on soldered and welded, or solderless cans, without bias.

Heretofore, every manufacturer of cans would loudly claim that his can was best—whether a soldered can or a welded can—according to the type he made.

No wonder ice cream men were bewildered—and got a lot of wrong ideas on the merits of these two types.

SOLAR ICE CREAM CANS

We Make Both Soldered and Solderless Cans —

and we can therefore honestly tell the truth about each—we need hold nothing back, nor camouflage.

This season we again offer the good old reliable Soldered Ultra, the can that put more pep in can making than any event in the industry. When the Ultra started, it started a march of improvements—and today the Ultra heads the list—millions in service attest its goodness.

Now for the "TINOKEH." Well—you have seen the other so-called welded cans—but if you want a common sense solderless can—that weighs more—that's stronger—that anyone can re-tin—that has no feather-edge fissures—that does not depend on tin to fill up cracks—then—you must see the "TINOKEH."

Pound for pound our prices are 10% lower! Surely write us!

deep) was exploited by Sealright salesmen as offering the ice cream manufacturer the opportunity to get \$1.60 per gallon for his ice cream. Ice cream packaged in the Sealright one-fourth pint flat size is on the same rapid, profitable selling basis as chocolate bars, a package of cigarettes, or any "buy it and carry it away with you" community. This Sealright size is especially salable in public places where many people must be served quickly—such as ball parks, banquets and other public gatherings, officials say. This one-fourth size when sold for ten cents, with a paper spoon clipped under the crimp on the cover, is another potential developer of volume sales at volume profit.

The Sealright one-half pint container made its impression, we are told, through offering ice cream manufacturers a way to create a real sales volume for "popular priced" ice cream. The one-half pint size when packaged with ice cream may sell to consumers for 15 cents—a popular price, they point out.

Sealright pints, quarts and two quart sizes were exhibited as logical developers of the ever-growing, ever-profitable carry-home trade. Sealright national advertising in The Saturday Evening Post and Good Housekeeping is backing up all Sealright sizes, but it is probably exploiting in particular the carry-home feature of Sealright service.

The Sealright "one-time-use paper packing tray," made in two sizes for the packing and delivering of ice cream in the Sealright gallon and two-quart sizes, is probably the most modern and economical way of delivering ice cream to homes and other private places, the company believes. Officials say it eliminates the use of cans—the call-back nuisance—the loss of cans and tubs and all the attendant overhead in man-power and time.

Sealright one-time-use paper butter tubs were exhibited in one, two, three, five and ten pound sizes and here again the sales appeal of a neat package plus the elimination of costly tubs, parchment paper wrapping, etc., impressed the visitors.

The following Sealright officials and representatives attended the National Dairy Show in Syracuse: Dr. Wilbur L. Wright, president; Eugene W. Skinner, vice-president; John L. Dolphin, New York, Pennsylvania, New Jersey, Delaware and the Dominion of Canada; Sam A. Landau, Southern ter-

ritory as far as New Orleans; Wm. S. Lee, manager Chicago office, 1812 North American building; J. Good Conley, Michigan, West territory from Canadian border to Texas; Ernest R. Johnson, Michigan, Indiana, Ohio and Kentucky; George Geddes, service man on Sealright ice cream filling machines.

* * *

Those who attended the second annual exposition of ice cream supply men held at Cleveland the week of October 22, will remember the pleasant moments spent in the Bischoff, Inc., booth. This company is located at Brooklyn, N. Y., and are manufacturers of pure high-grade chocolate and cocoa. The exhibit was most interesting. They had pictures on exhibition which showed the growth of cocoa, the harvesting and methods of curing at the plantation. They had raw cocoa beans, roasted cocoa beans and the product through the various stages to the finished cocoa powder. Visitors were impressed with the display of pure chocolate liquor and also with the purely refined cocoa butter. That the proper manufacture of chocolate and cocoa requires experience, skill and special knowledge, was readily realized by visitors after hearing the interesting story of all stages of the manufacture of these products. Visitors were impressed with the fine coating displayed for covering eskimo pies. Twenty eight years of effort are back of the Bischoff products; and their goods merit the reputation of being pure and of high quality, officials say.

✱

Supply Association's President Happy.

At the close of the exposition, Oliver S. Jordan, president of The Association of Ice Cream Supply Men, expressed enthusiastic appreciation of the co-operation which Cleveland manufacturers and the Ohio state association of ice cream manufacturers gave the exposition committee.

"The arrangements for the exposition were perfect," said President Jordan.

Similar appreciation of the co-operation of Cleveland and Ohio manufacturers, as well as the co-operation of manufacturers as a whole, was included in a statement issued by the supplymen's organization.

The statement read:

"We are happy and proud of having had the opportunity of again holding our show in conjunction with the National Association of Ice Cream Manufacturers' convention. The 1923 show, we believe, was marked for its educational value, for which we will continue to strive in future years.

"The attendance at the exposition was most gratifying. We want to take this opportunity of thanking both manufacturers and exhibitors for the overwhelming success of the exposition."

Supplymen's Convention.

The convention of the supply men was held Sunday morning in Public Auditorium.

Heading the committee of supply men, who arranged the convention entertainment was Oliver S. Jordan, New York, as honorary chairman; and Howard V. Black, Cleveland, as chairman. Others were V. L. Cooke, J. T. Erwin, C. E. Schuster, F. L. Fisher, L. Miller and J. B. Wise. The co-operating committee of the Salesmen's Club of The Association of Ice Cream Supply Men was composed of Thos. J. Stewart, assistant honorary chairman; M. J. Conaton, Jr., chairman; J. Achelpohl, P. N. Miller, Jr., A. T. Sponar, Lloyd Uhl, Elmer Mack, D. L. Beal, George A. Mortland, Thos. Crouch, J. B. Morse, Leo. E. Levy, F. R. Merriek, Harry Pratt and H. W. Maurer.

The committee representing the National Association of Ice Cream Manufacturers, their Ohio association and the manufacturers of Cleveland was headed by J. Schindler, with Harry Pratt, David H. Schlegel, Fred

R. Albery, I. Budin, P. H. Baker, Dick Bauman, and L. B. Baum as members.

A ladies' committee to assist in entertaining visiting ladies was composed of Miss Cecil M. Baldwin, Miss Nell Gray, Miss Pauline Toubel, Mrs. Frank Neff, Mrs. Gerard Bauman, Miss Carolin Baum, Miss S. Jennis White, Mrs. Michael Conaton, Mrs. Fred R. Merriek and Miss Margaret Mahoney.

The exposition committee for the supplymen's association was composed of K. W. Schantz, Lewis B. Esmond, Thomas J. Stewart, Albert McDougal and Roberts Everett.

Cleveland is to be congratulated, Mr. Everett declared, in having such an efficient convention board of its chamber of commerce.

"The arrangements for the convention and exposition were rushed along in a highly efficient manner by the convention board, in co-operating with the various committees," he said.

TRUCK OPERATING COSTS.

(Continued from page 95)

a rented garage. Heat, light, water, etc., used in the garage should also be included under this item.

(7) Overhead.

An item of cost that is probably overlooked more than any other is that of overhead. This is also the most difficult cost item to ascertain. Overhead refers to the expenses of administering the business and includes such items as managerial and clerical salaries, office rental, supplies, telephone, lights, heat, water, taxes, insurance, depreciation, etc., incidental to the proper supervision of the business. Where the fleet of trucks is used in a purely transportation business the

total overhead is prorated equally among the trucks. In the case of a combination of trucking and warehousing business, the overhead must be properly divided between the trucking and the warehousing ends of the business. In the case of a large business concern making its deliveries it is rather difficult to apportion the proper share of the overhead to the trucks. The amount of overhead to be charged depends on just what part trucks play in conducting the business as a whole. This varies so that each case requires individual consideration.

For the purpose of economic comparison of trucks it is probably fair to neglect the overhead and consider the actual truck operating cost alone. However, in seeking the total operating costs to be used, for instance, as a basis of fixing rates it is absolutely essential that the overhead charges be included.

II. Variable Costs.

(8) Depreciation (Mileage Basis).

This item has previously been discussed under the heading of Fixed Costs and no further explanation is needed here. If figured on the mileage basis it comes under the heading of Variable Costs.

(9) Driver's Wages.

There is a difference of opinion as to what classification driver's wages should come under. Some authorities place it under the class of fixed costs, some include it with the variable costs while a few consider it a separate and distinct item and do not include it under either the fixed or variable costs.

From the definition of fixed costs (all those items which continue whether or not the truck is in operation) it is evident that driver's wages are excluded. Even though the driver be employed on a straight time, he would not be permitted to sit around idle while the truck is laid up for repairs or for other reasons, but would be placed on other work. Any work he might perform should not be chargeable to the truck under this item of driver's wages. It seems more logical to place the driver's wages under the general heading of variable costs.

In computing "cost per day" it is best to list the costs separately as variable costs, fixed costs and driver's wages, adding all three to get "total cost per day." By separating the total cost per day under these three headings, it is possible to make a better comparison with other trucks as regards fixed and variable expenses uninfluenced by variations in rates of driver's wages.

The item of driver's wages is usually the second or third largest item in the total cost of operation, averaging 15 to 20 per cent. If the owner drives the truck he should charge off wages for himself at the existing market rate for labor of this class. An operator who drives his own truck should bear in mind that he is both employer and employee. He is not successful unless he is paying himself wages at the prevailing driver's rate, making an adequate profit on the investment involved and in addition is receiving proper remuneration for the work of conducting the business.

In case a helper is used on the truck, his wages should be included under this item or entered under a separate item of helpers' wages under the general heading of variable costs.

(10) Gasoline or Electric Current.

This is one of the large items of truck operating costs, ranking about fourth among all the items. Twenty-six states are now imposing a gasoline tax which must be included under this item.

(11) Lubricants.

The item of lubricants covers the cost of oil and grease. It is one of the smallest items in the list.

Real Value and Correctness of Principle

is the only basis on which we could have built up a wood working plant covering 15 acres and employing 2,000 skilled workmen. This plant is a tribute to the everlasting qualities of Virginia White Cedar.

heless it amounts to an appreciable sum in a time and must not be neglected.

) Tires.
mentioned before, tire cost is a variable cost and, ore, the value of the tires is deducted from the cost of a new truck leaving the proper balance depreciated.

ere are some operators who assume a certain life (on past experience) for the tires, i. e., 18 months and 6 months for pneumatics, and then record re expense under the heading of fixed charges. mplifies the tire cost record by eliminating the ity of keeping tire mileage records.
should be noted here that the type of road sur- over which the trucks operate greatly affects e of the tires.

e cost of tire repairs must be included under this

) Repairs and Overhaul.

is item is about the second or third largest in operating costs. It includes cost of materials labor for all repairs as well as the cost of the overhaul. This latter item will run as high as a year for a five ton truck. Many cost figures are arate due to the fact that this item of overhaul ot been properly considered. For instance, a cost l might be kept on a truck for a period of six s in which no overhaul occurred. The resulting ata would be too low. Cost records during the six months period, including overhaul charges, be too high. It is evident that this item should ead over the entire twelve months period in order ure accurate cost figures.

CONVENTIONS ARE CLEARING HOUSES FOR IDEAS.

Conventions, as an institution, are clearing houses for ideas and problems confronting the ice cream manufacturers where it is possible to personally discuss troubles with those who have in a measure successfully solved them.

I seriously doubt if there is any other assembly of kindred interests where the spirit of willingness to along helpful and unselfish solutions of our various problems as will be found at our conventions.

The larger manufacturer realizes the importance of these meetings, and generally speaking, attends regularly; but the smaller manufacturer, to my mind, is one who will get the most benefit and he cannot afford to lose such an opportunity to hear subjects of interest to his business discussed by those of larger experience. You may have your idea of how best to do a thing at your own plant, but it's quite possible some other fellow is doing it in a better way for less money.

Get his idea—adopt it—save real money.

Let's meet at Little Rock, December 4, 5, 6.

W. E. DRAKE,

Union Ice Cream Company
Nashville, Tenn.

"WELCOME TO ARKANSAS."

The program as it is being prepared for the convention of the Southern Association of Ice Cream Manufacturers at Little Rock, Ark., Dec. 4-7, is one of a large scope and takes in the discussion of every phase of the ice cream industry, as well as the entertaining features are of such nature that both old and young enjoy themselves to the fullest extent. No manufacturer can afford to miss a single session or miss any of the material that is handed out at this time.

To get the full benefit you should bring the wife and the help and their wives and make it a holiday for a week, it will be money well spent and fill every minute full of pep besides the new ideas that everybody will pick up.

When such big men as W. J. Barritt of Tampa, Fla., W. E. Drake of Nashville, Tenn., W. W. Campbell of Shreveport, La., A. E. Dixon of Fayetteville, N. C., J. H. Sutton of Vicksburg, Miss., and many others that manufacture ice cream on a big scale get together to discuss the different phases of their business, you can rest assured there is something doing.

Anybody that is connected in any way with the manufacture of ice cream has not heard Prof. A. C. Jones of Stillwater, Okla., lecture, cannot comprehend the most instructive information he puts into his lectures.

Secretary J. W. Clopton will be in Little Rock on the 20th of this month to make the final arrangements for this great convention. "Pete" Miller was here Nov. 9 and completed all arrangements for the Ice Cream Flyers.

Arkansas ice cream manufacturers, and especially those of Little Rock, consider every member of the Southern Association of Ice Cream Manufacturers and the Ice Cream Flyers their guest while at the convention, and nothing is too good for them. We want to be of service to you. We bid you thrice welcome.

G. A. MEYER,

Secretary and Treasurer Arkansas
Ice Cream Manufacturers' Association
Stuttgart, Ark.

ANNUAL CONVENTION

Southern Association of Ice Cream Manufacturers LITTLE ROCK, ARKANSAS

To Members and Associate Members:
Southern Association of Ice Cream Manufacturers:

GENTLEMEN:—

We are pleased to advise that executive officers of the above association have selected the following schedules as the official route to the Southern convention, which will be held in Little Rock, Arkansas, December 4 to 6, 1923.

In order that members of our association may spend one day in Hot Springs, Ark., without additional cost of railroad fare, during the meeting of the Eleventh Annual Convention, which will be held in Little Rock, Ark., December 4 to 6, 1923, it has been decided to suggest that members purchase the "all year ticket" to Hot Springs, Ark. These tickets are on sale daily, with final limit ninety days from date of sale, stop-over allowed at all points enroute. Please see that your tickets read via the MISSOURI PACIFIC RAILROAD, from Memphis, St. Louis and Kansas City. This in order that we may all travel together on the trip from Little Rock to Hot Springs, as well as from Memphis, St. Louis and Kansas City.

We have also to request that members arrange, if possible, to arrive in Memphis the morning of December 3rd. We will visit members of the association in Memphis, and make a sight-seeing trip, have lunch at one of the leading hotels and leave Memphis via the Missouri Pacific at 1:50 p. m., arriving in Little Rock at 6:55 p. m.

PULLMAN RESERVATIONS:—Secure Pullman reservations through your railroad representative for the going trip. The Missouri Pacific representative will be at headquarters hotel, Little Rock, during the convention, and make your Pullman reservation covering the entire return trip.

The trip to Hot Springs, Arkansas, should appeal to everyone and will give us an opportunity to visit the Hot Springs National Park, wherein is located forty-six springs which gush approximately one million gallons of water daily, at an average temperature of 135 degrees Fahrenheit.

DECEMBER 4th, 5th and 6th, 1923

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

TAXATION MAY CONFRONT SOUTHERN ICE CREAM INDUSTRY.

Editor The Ice Cream Review:

I assure you that the Southern ice cream manufacturers greatly appreciate the co-operation and help that you have always given.

As we are not yet members of the Southern association, but intend joining at this meeting, I do not believe that a letter to the Southern manufacturers from me would be in order. However, I would like to see you make a special plea to them along this line especially.

The ice cream industry is one that has grown up very rapidly. It is one industry that the legislators have not, as yet, taxed as an industry. With the increasing demand for money to run the state governments, they are looking for some one to tax. Their eyes are falling on the ice cream manufacturer and he is going to be the subject of some very unjust taxation, if he does not stay right on the job.

The legislators will treat us right if they know what is right. But we must be ready with figures and statistics and be able to convince them when they are wrong. We have had some experience along the line here in Texas and if we had not been organized and on the job laws would have been enacted that would have been very unjust to the ice cream industry.

There are also many other things that demand that we all attend conventions but the above is one that I do not believe has been stressed enough.

Yours very truly,
GEO. L. BOEDEKER,
Boedecker Manufacturing Co.,
Dallas, Tex.

NEW PLANT IN TENNESSEE RANKS WITH SOUTH'S BEST.

(Continued from page 12)

outgoing doors of the hardening room, and on the opposite side is the freezer room.

The hardening room, which is divided into four departments and two anti-rooms, contains something over two and one-half miles of pipe that is used for refrigeration. A temperature of eight degrees below zero, Fahrenheit, is maintained continuously in the hardening room. More than \$8,000 worth of cork was used in the construction of the room with excellent results.

A battery of five Fort Atkinson freezers, which are of hundred-quart capacity and three of quart capacity, direct motor driven, together with

View of Mixing room.

Mojonnier brick machine and tester, comprising the equipment of the freezer room. The drainage in the room is perfect, and the terrazzo floor and tiled walls lend a pleasing appearance.

In an adjoining room there is a Mills whipping machine, Mojonnier carton liner, Eskimo Pie dipping machine and steam kettle. This room is also used for wrapping and packing the individual packages, such as Eskimo pies, individual bricks, etc. Girls working here are in uniform.

On the next floor above are the drivers' dressing rooms, equipped with steel lockers and shower tub and can repair and paint shops; supply store and laboratory, which is equipped with a complete Mojonnier outfit. The high degree of efficiency that has been attained in the industry by the company for turning out a consistent product is attributed to this named department by the management.

Adjoining the laboratory is the mixing room having C-P vats, having something over 2,000 gallons' capacity, a Mojonnier hot well and sixty-inch vacuum pan. A Gauldin homogenizer and holding vats are installed in this room also has a terrazzo floor and perfect drainage.

On the roof where the spray-jet pond cooling system is located, Ernest Drake has a rainbow made to his liking. He believes that this is an omen of good luck and it might have been for him, as it's easy enough to see both ends, thought there isn't any bag of gold in either one.

"If they cut out the middleman," said the company, "they'll have to come to me for their ice cream." Electropure News.

INVITATION FROM HOT SPRINGS TO SOUTH- ERN ICE CREAM MANUFACTURERS.

(Continued from page 32)

the valleys in a most picturesque way. Central Avenue, the main thoroughfare, is so narrow at one point there is room only for a single row of buildings on each side. The very heart of the city is flanked on the west by Hot Springs Mountain with its 46 thermal springs, from which flow one million gallons of radio-active waters daily. At the summit of this mountain, an observation tower offers a magnificent view of the surrounding valleys. The mountain drive-ways and can be seen winding in gradual ascent in all directions. "Bath House Row," shadowed by its magnificent grove of magnolias, is made up of bathing palaces of exquisite architectural beauty.

Hot Springs, aside from its accessibility, convenient climatic advantages and scenic inducements, is interesting because it was set aside in 1832 by the

United States Government as the nation's health resort and playground for the people of the nation for all time.

The resort is also interesting because of its rich legendary background which has to do with the Indians, great explorers and with Ponce de Leon in his famous search for the "Fountain of Youth."

MINNESOTA SHORT COURSES

The University of Minnesota, University Farm, Minn., has announced dairy short courses for 1923-1924. The ice cream course began November 19 and continued for two weeks. This was followed by the milk plant course, and the six weeks' beginners' course will open December 31. The cheese plant course begins February 11.

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Manufacturers of Pacific States to Meet in Canada

(Continued from page 40)

Vancouver is the western terminus of the Canadian Pacific, Canadian National, Great Northern and Northern Pacific Railways. The Chicago, Milwaukee and St. Paul, the Union Pacific, the Kettle Valley, Fraser Valley and Pacific Great Eastern Railways operate here. The city is served by 39 steamship lines which give connection

The city controls its water system and draws a supply from glacier-fed streams. The present daily supply is 20,000,000 gallons, with an additional 24,000,000 in the city reservoirs, and a total available of 50,000,000 gallons.

Industries of the Vancouver district number approximately 543 and include lumbering, mining, fishing,

Downtown in Vancouver.

with the Orient, Hawaii, Australia, New Zealand, and with all domestic, Pacific coast and Puget Sound ports; monthly sailings to and from Europe via the Suez and Panama Canals; is the natural western outlet for produce of the prairie provinces.

Greater Vancouver's harbors are three, with some 80 miles of water frontage and 40 miles of anchorage. Burrard Inlet, Vancouver's main harbor, is one of the first three natural harbors in the world. False Creek, in the heart of the city, is an anchorage for smaller craft, and has docks for many industrial concerns. The Fraser River provides frontage many miles in extent with all the security and other advantages of a fresh-water harbor. Civic owned sites for factories on False Creek are provided on long leases at low rentals.

Shipping facilities are excellent. Three of the trans-continental railways have large wharves, and the Dominion government has built one of the best equipped wharves on the Pacific Coast at a cost of \$1,500,000, and a grain elevator costing \$700,000 with a capacity of 1,250,000 bushels. Plans are under way for the increasing of the facilities at the elevator and also for the construction of a new one. Two piers are being built, the C. P. R. pier, to cost \$2,000,000, and the Ballantyne, \$5,000,000.

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

ICE CREAM IN NEW JERSEY

New Jersey sanitary inspections have been made of the establishments where ice cream is made in this state as well as those establishments from which ice cream is shipped into New Jersey. The results of the examinations made of samples of ice cream show that ice cream as sold in this state generally complies with the present standard of 8 per cent milk fats and of 6 per cent milk fats when the ingredients include fruit, nuts and eggs. Examinations were also made to detect the presence of fats other than milk fats; but no adulteration of this character was discovered.

From the results of this work the conclusion is drawn that the minimum standard of milk fats which shall be present in ice cream as fixed by the law is too low. Ice cream should be the frozen product made from cream with the addition of other milk products or eggs and flavoring materials, and should have the general characteristics of a product made from cream. Certain ice cream manufacturers have realized that there would be a demand for a product which contained a higher percentage of milk fats than that specified by the law. These manufacturers have prepared and sold ice cream which have been found to average at least 10 per cent of milk fats. A few manufacturers of ice cream do not use gelatine, vegetable gums or other fillers, but use only milk products, sugar, certified colors and flavoring substances. While a section of the ice cream law permits the use of gelatine and vegetable gums in ice cream, it has been demonstrated that ice cream may be made and distributed on a commercial scale without the use of these fillers and stiffening agents.

On the other hand there are a group of manufacturers who attempt to prepare ice cream which barely complies with the legal standard for milk fats. When a low grade of product is prepared there is a tendency to use a considerable quantity of fillers or stiffening agents in order to imitate the characteristics of a product rich in milk fats and solids.

The public appreciates the importance of the pasteurization of milk in order to protect the consumer from the possibility of the transmission of disease through this food. It is equally important that cream and milk products which are used in ice cream, be pasteurized to afford the same protection. While a large percentage of the milk and cream used in ice cream is pasteurized, a considerable quantity is prepared from raw dairy products and sold in this state. The Bureau recommends the use of pasteurized cream and milk products in the preparation of ice cream.—New Jersey Public Health News.

INDIANA PLANT ENLARGES

The Huber Ice Cream Company, New Albany, Indiana, according to announcement, is making preparation for extensive enlargements of its facilities at its plant, East Market and Fourth Streets, to meet increasing business. The capital stock of the company has been considerably increased. New machinery will shortly be installed to manufacture new ice cream products.

Announcement was also made by Ernest C. Huber that William B. Gallemore and Ernest Denk, Seymour, Indiana, have acquired an interest in the company. They are men of many years' experience in the ice cream industry and have built up a large business at Seymour. Mr. Gallemore is owner of the Seymour Ice Cream Company and Mr. Denk is manager.

Officers of the company are William B. Gallemore, president; Ernest Denk, vice-president, and Ernest Huber, secretary.

foremost in this part of the state. They will be hosts to the convention on Monday, the first night of the meeting, at a smoker to be held at the Chamber of Commerce.

CO-OPERATIVE ADVERTISING DISCUSSED BY NEW ENGLAND ASSOCIATION.

The November meeting of the New England Association of Ice Cream Manufacturers was held at the American House in Boston at one o'clock on November 14 with 48 present at lunch. President Slingerland announced the following new members:

Active, Richmond Co-operative Ass'n., Inc., Richmond, Va.

Associate, Jennison-Huston Co., Inc., flavorings, fruits and syrups, Boston, Mass. National Paint & Varnish Co., Cleveland, Ohio.

N. E. Representative, A. G. Archer, 37 Taylor Ave., Paints and Varnishes, S. Norwalk, Conn.

The president read the report of John Semon, New England director of the national association. Mr. Shanessy discussed the registration of ice cream packages.

It was felt that it might be a good thing to see if could get a law for registration. Mr. Sutton in introducing D. E. Little and his advertising proposition said that Mr. Little had done several pieces of work for him successfully.

Mr. Little proposed a method of raising money for ice cream advertising as follows: He would employ men to go to ice cream retailers and solicit funds toward a co-operative ice cream advertising campaign on the basis of increasing their business and on the basis of the manufacturer being willing to co-operate on the work to the extent of matching whatever money was subscribed by the retailers. The work of collecting money from the retailer would be paid for on the basis of 15 per cent.

All money could be handled through the association office as a special advertising fund and as the money was subscribed by the retailers the accounts with the names of retailers and amounts would be sent to the manufacturers and the manufacturers would match it by sending a check to the association office.

The secretary suggested that this should be handled not in the name of the association but in the name of the industry in the city where the work was taken up. By doing this it would allow collection of money from non-members of the association and also those who make their own ice cream.

He stated that from his experience in handling milk advertising he felt that it would be advisable to have a large contributors' committee composed of a representative from each of the manufacturers and that each manufacturer choose one of his retailers to act with him on the committee. In turn, the large committee would elect a small one to work out details, budgets, and present to the large committee for approval.

It was brought out in the discussion that if the retailer actually put money into this advertising campaign he would handle the advertising of the manufacturer with a little more respect on account of the money cost. There would be built up between the retailer and the manufacturers a mutual interest in the selling of ice cream and each would be backing the other to increase sales.

On the question as to the amounts of money that could be raised from this campaign collectively, Mr. Little said between \$90,000 and \$100,000. He felt that they could probably collect an average of \$10 per retailer. He stated that he would like to go further into this investigation and try it out. He also said that he had experience in collections of this kind with the small restaurant people. He stated that should he go out and find out that he could not collect there would be no expense to the ice cream trade whatever. If it worked in Boston it could be worked in other cities.

The result of the discussion was a very favorable impression. Mr. Little is to go ahead and see what can be done with the individual manufacturers.

President Slingerland appointed the following committee for program and entertainment for the annual meeting in January: G. W. Kenison, chairman, W. P. Sutton, T. S. Shanessy, T. P. Grant and W. R. Robertson; H. B. Slingerland and W. P. B. Lockwood being ex-officio members.

Discussions relative to the things brought out at the national convention in Cleveland centered around a mechanical refrigerating ice cream cabinet.

It was decided that the December meeting which is open only to active members should be held in Worcester at the Hotel Warren on December 19.

W. P. B. LOCKWOOD, Secretary

POODLE DOGS ASSURE LIVELY CONVENTION FOR IOWANS

The Poodle Dogs are planning a bigger and better than ever this year at the convention at Mason. We have, through the untiring efforts of our entertainment committee, been fortunate in securing some good talent for the banquet night. I would like to not only all the old Poodle Dogs present, but a large number of new ones this year. We want to put over something big for Mr. Wilcox's home city so let us all shout and bark once more for the Association of Ice Cream Manufacturers of Iowa.

Yours truly,
J. E. ENRIGHT,
President.

IOWA PLANT EXPANDING

Foundation has been laid for the new building of the Mory Ice Cream Co., Charles City, Ia., according to latest announcement. Plans are drawn for a modern plant and ice cream plant. It will be constructed of brick and tile, 60 by 120 feet. Officials expect the construction to be completed the first of the year. Capacity will be increased to 75,000 gallons annually, besides the increase of wholesale milk and cream, they say.

Anyone who studies the advertisements in this paper will not have to be told that it is a profitable habit. He gets the profits daily.

YOUR CO-OPERATION WITH OUR ADVERTISERS BRINGS DESIRED RESULTS.

The Ice Cream Manufacturer and the Food Director

By JAMES FOUST*

I ALWAYS hail with satisfaction an opportunity to address the members of the Association of Ice Cream Manufacturers of Pennsylvania. I find in your association an agency that has done much to accomplish the objects which the bureau of foods is commissioned by the people to secure.

Ice cream laws are of comparatively recent origin. It is only fourteen years since the passage by the legislature of Pennsylvania of the first ice cream act.

JAMES FOUST.

The growing necessity for such laws is to be found in the changing social conditions of our people. Fifty years ago there were no ice cream laws because none was needed. Fifty years ago the people of our country produced in their immediate neighborhood food products, such as milk, cream and ice cream. The transportation of milk and milk products from long distances, with the problems of preservation and protection incident thereto, did not

exist. The large ice cream factory was comparatively unknown. Many of the milk products on the market today were not in existence. Fifty years ago ice cream was a luxury, eaten largely in the homes of the rich, but today it is essential to the meal, whether it be in the homes of the poor or the banquet halls of the rich, it is a part of our everyday diet. We did not then reach forth to every clime and country for the supply of our tables. As our method of living has become more and more artificial and farther and farther removed from

* Director, Bureau of Foods, Pennsylvania Department of Agriculture. Address before the Association of Ice Cream Manufacturers of Pennsylvania, at their seventeenth annual convention in Altoona, Penna., November 14, 1923.

the simplicity of our fathers, the danger of contamination and opportunity for adulteration of our food, including milk, cream and ice cream, has become greater and greater. In these increasing opportunities for adulteration and dangers of contamination are to be found the reasons for the increasing stringency of our laws.

Adulteration of food products are of two kinds: conscious and inadvertent. The one springs from deliberate purpose. The other is usually the product of carelessness. One is just as dangerous as the other. Our laws are intended to reach both.

The whole range of governmental activity presents no agencies more important to the welfare of the people throughout the commonwealth, than those which are guarding the milk, cream and ice cream supply. For milk products cannot be secured by good laws alone. Back of the laws must be the officer or officers commissioned to enforce such laws. Back of such officers must be an enlightened public sentiment sustaining such officers and holding up the hands of such officers; a public opinion that will consistently and persistently stand for the public welfare; courts that will construe such laws so as to fully and effectively accomplish the purpose of their enactment; and last, but by no means least, such organizations as the ice cream manufacturers of Pennsylvania—fair minded, intelligent and law abiding—sacrificing selfish consideration for the welfare of the public.

Great Progress in Pennsylvania.

I am glad to be able today to report great progress in the contest for the purity of the Pennsylvania ice cream supply. The official chemists have only found two samples of ice cream unlawful during the past year, to November first.

The first ice cream act was approved March 24, 1909. The last legislature passed a new law to take its place approved March 20, 1923. The new law is more comprehensive than the old law. I desire to quote three important provisions of the new law:

"If it contains any fats, oils or paraffine, other than those specified, added to, or blended, or compounded, with it: Provided, however, That chocolate ice cream and the coating of ice cream may contain cocoa butter.

"If a product is manufactured, which is an imitation or substitute for ice cream, and is offered for sale under a coined or trade name.

"If it is offered for sale from any container, comparable to a can, box, or cabinet, which contains any article other than ice cream.

In brief, the present law prohibits the use of chemicals and doubtful substances that can be injurious to the well-being of the consumer. Cream and its products, together with sugar and flavors, will be found to be the principal ingredients used in the manufacture of ice cream. This law was vigorously advocated by the ice cream manufacturers of Pennsylvania who are anxious to inject strict cleanliness and wholesomeness into the ice cream industry as is the State Department of Agriculture. I am under obligations to—and desire to express my sincere appreciation to E. E. Riecky, President, J. W. Neuman, your Secretary, W. E. Hall, and Thomas Hall of your board of directors for their co-operation and assistance in drafting the provisions of the law above referred to. It went through the legislature and was approved by the governor without changing a single word.

Ice Cream Industry Indispensable.

The ice cream industry, with other industries, was one of the requirements of modern social life, but in the economy of society, you are now indispensable—just as much so as the telephone, telegraph, fast freight and express, modern postal facilities, rapid transportation, and all of the other necessities of modern life. You are, in fact, part of the pushing, throbbing, vital force of modern business. Your occupation is to make business, to get business, and do business. Part of the activity in the modern business world is due to the force which is added to business by the organized ice cream manufacturers of our country.

Desire to center your attention on the subject of sanitation in handling ice cream as it relates to the requirements of modern life. It is a common saying that "cleanliness is next to godliness." A famous scientist expressed a similar idea when he said, "Soap is the measure of civilization."

The American people have always been proud of the cleanliness of their homes. Today they are thinking a great deal about sanitation, and especially about sanitation in the production and handling of milk, cream and ice cream. Women's clubs all over the land are constantly discussing the subject and demanding a betterment of conditions, and every day the newspapers and magazines devote columns to it. Our laws reflect the condition of public demand, and state after state are enacting sweeping sanitary laws in response to it. Pennsylvania has no sanitary laws with reference to the manufacture and distribution of food products, except non-alcoholic drinks. When the buyer thinks about a trade condition, the wise manufacturer and seller will try to think and act ahead of him.

Cannot close without saying a word regarding your president, Robert Crane, of his value to your association, and of the loss we have all suffered by his death. His chair is vacant, his presence missed.

TO TAKE MANUFACTURING CENSUS

The Bureau of the Census will take a census of manufactures covering the calendar year 1923, it was announced November 15 by N. Loewenstein, secretary of the National Association of Ice Cream Manufacturers. The work is done in compliance with the Act of Congress approved March 3, 1919, and the schedules have been prepared after conference with associations, and are of interest in the various industries.

"These schedules," says Mr. Loewenstein, "will be made during the first week of January, and the members of our associations and all others engaged in the industry are urged to make the reports promptly, as the Bureau has agreed to tabulate the data as rapidly as the reports are received and to publish the tables within a few days after the receipt of the last report."

The bureau has been co-operating very closely with the industry and desires to be of service to us. It is important that the reports be made by mail, otherwise the government will be put to the expense of sending a special agent to the various establishments. It is hoped that our membership at least will co-operate and make reports promptly."

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

A NEW ICELESS ICE CREAM CABINET

By N. C. Tompkins

In America, both in the United States and Canada, ice cream is truly a national confection. In all other countries of the world, however, ice cream is a luxury—obtainable only by the very rich. Much of the popularity of this great dish has been due to the fact that it can be had at almost every corner store and to its comparatively low cost.

But ice cream is a very perishable product and in order to be tasteful, it must be well frozen. To keep it so, requires constant refrigeration and the common method of sup-

plying this refrigeration by means of salt and ice has been far from satisfactory. The daily icing of the cabinets causes slop and muss about the store and considerable inconvenience. Furthermore, it is difficult with the ice method to keep the ice cream at the proper degree of coldness to be at its best.

In the majority of the cases, the ice cream manufacturer has performed this service without charge or at a low cost. Great wagons or trucks, loaded with salt and ice are necessary to daily visit each dealer and repack the ice cream. Naturally this entails considerable expense and extra labor.

One of the largest manufacturers of ice cream and refrigeration machinery, however, has lately perfected a small refrigeration machine in various sizes, ranging from $\frac{1}{4}$ to $1\frac{1}{2}$ tons in capacity which can be connected to an ice cream cabinet and it will automatically keep the ice cream at constant desired temperature day and night. The machine will operate day in and day out without attention.

At one stroke it eliminates much of the grief connected with the distribution of ice cream. The dealer is no longer bothered with the daily visits of the service truck to repack his cream and the muss and slop which is the usual aftermath of such visits is avoided. On the other hand, the ice cream manufacturer eliminates the daily expense of salt and ice as well as the labor cost and cost of operating the wagon or truck. Furthermore, since the ice cream will always be uniform in texture and coldness and hence be served at its best, it will be a better advertisement for the manufacturer and dealer and the customer will undoubtedly consume more of it.

The operating mechanism is in one compact unit. No concrete foundations or other arrangements are necessary. Furthermore, it can be moved from one store or location to another, should this be necessary.

It is equipped with an automatic thermostatic control which starts or stops the machine whenever necessary to maintain the desired temperature.

The compressor is a 2 cylinder enclosed type. A dependable self-oiling splash system of lubrication is used. The

entire outfit is constructed throughout of the semi-steel tool steel.

The system is especially designed for the use of anhydrous ammonia as the refrigerating agent. This has proved most practical and satisfactory for general use as it is dependable, safe and obtainable everywhere.

The machine is operated by a $\frac{1}{2}$ H. P., 1200 R. P. M. electric motor connected to compressor by belt.

In addition to the $\frac{1}{4}$ ton outfits, the CP self contained refrigerating machines are built in capacities of $\frac{1}{2}$, $1\frac{1}{2}$ and 3 tons. They can be set up and in operation in short time after delivered, as they are completely assembled at the factory.

By mentioning this publication, The Creamery Package Mfg. Co., 61 W. Kinzie St., Chicago, will send a descriptive folder upon request.

Greatest Ice Cream Brick

At the ball, the Danse Diable, given at Cleveland October 25 by the Association of Ice Cream Supply Men in honor of the industry and to which all ice cream manufacturers and their families and friends were invited, the largest single brick of ice cream ever made, displayed and served anywhere in the world was the center of a unique and interesting demonstration.

The brick was drawn to the center of the large dance

inscribed in the ice cream on the top of the brick, were approximately 3,500 ordinary individual servings in the brick.

The seven ice cream manufacturing companies of Cleveland combined in manufacturing the huge brick. One expert ice cream maker from each of the plants superintended the actual mixing and freezing. Each company furnished a part of the mix. The

In the Manufacturing Process.

floor of the Cleveland Masonic Temple by twelve men attired as imps. They were preceded by a ballet of girls, also in imp costumes. There was a procession around the ball room and the huge confection was placed at one end of the hall and the imps served it to the estimated crowd of more than 3,000 that were present.

Hundreds of guests asked, "How large is the brick?" "How many servings are in it?" "Who made it?"

The brick contained 168 gallons of ice cream. It was 57 inches long, 32 inches wide and 27 inches high.

The bottom layer was chocolate, the middle strawberry, the top vanilla.

"Welcome, National Ice Cream Manufacturers" was

Giving the Public a View of World's Largest Brick.

Ice Cream Company's plant was chosen for the freezing. The representatives of the seven plants were on the scene for seven days preceding the evening of the ball.

In lifting the brick ten men were required.

MISSISSIPPI FORMING CONVENTION PLANS

With their convention nearly several weeks in the future, officials of the Mississippi Ice Cream Manufacturers last month were earnestly at work in preparations for the annual meeting to be held at Laurel, Mississippi, on January 8 and 9. These dates were selected at a conference of officials at Cleveland, and they now have plans in the way for their usual lively convention.

Hotel Pinehurst will be convention headquarters. Secretary N. D. Brookshire of Meridian, expects to announce the program in the next issue of The Ice Cream Review. President S. N. Sutton of Vicksburg, has asked upon the membership to make ready to attend. The convention will be pushed more vigorously after the Southern convention. The Mississippians always make a good showing at the Southern convention, and the president expects to lead a large delegation to Little Rock.

A TAKING GIRL.

She took my hand in shady nooks,
She took my candy and my books.
She also took that lustrous fur,
She took the gloves I bought for her.
She took my words of love and care,
She took my flowers, rich and rare.
She took my time for quite a while,
And in return gave me a smile.
She took my kisses, maid so shy,
She took, I must confess, my eye,
She took everything that I would buy,
And then she took another guy.

PREPARING FOR MICHIGAN SHOW

The fifth annual meeting and show of the Michigan Allied Dairy Association will be held at the Armory Building, Kalamazoo, Michigan during the week of February 4, 1924.

The diagrams and contracts for space in the exhibit hall will soon be mailed out to our members.

Do not fail to attend to matter of space reservations promptly upon receipt of these plans and contracts.

In your contract for space will be included your annual dues to our association which also includes associate membership in all of the other units as follows:

Michigan Association of Creamery Owners and Managers.

Michigan Association of Ice Cream Manufacturers.

Michigan Milk Producers Association.

Michigan State Farm Bureau.

Last year all space was taken and some late comers could not be accommodated.

The management is in the hands of the Michigan Allied Dairy Association—R. F. Frary, Lapeer, Mich., secretary, to whom all space should be addressed.

The Michigan Dairy Boosters are actively represented on the following committees:

General show, floor, banquet, and advertising.

Shipping instructions will be sent out by the secretary with the space and contract notices.

It is expected that booth spaces will be ready for set up early Monday morning, Feb. 4th, so that exhibitors can start placing exhibits.

Transportation Committee—Bechtel, Farry, Francke, and Near will look after prompt deliveries of shipments to the armory for spaces.

VIKING—The Practical Pump

For pump users who demand dependability and economy of operation.

The VIKING is self-priming and delivers a steady stream under varying heads. This eliminates all splashing and pounding.

Only two moving parts—no valves, springs or other trouble-makers.

Get the Viking catalogue. It's yours for the asking.

VIKING PUMP CO., Cedar Falls, Iowa

VIKING PUMPS

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

All exhibits should be fully placed by noon Tuesday, February 5th.

In addition to the annual banquet at the Masonic Temple and the general and unit meetings under the direction of the Michigan Allied Dairy Association, the Michigan Dairy Boosters will offer a considerable program on their own account.

The program as tentatively arranged is as follows:

Tuesday, February 5th P. M.—Exhibitors opening session at the armory.

Orchestra will render a musical program.

Wednesday, February 6th—Armory open 8 to 6 P. M. Musical program in the afternoon.

The general opening session will be held in the afternoon—program to be announced later.

In the evening at 6.30 P. M. the annual banquet will be held at the Masonic Temple.

Following the banquet the general M. A. D. Association business session will be held in the banquet room.

Thursday, February 7th—Exhibit Hall open 8 to 9 P. M.

Orchestra, smoker and entertainment. Plan for afternoon at Exhibit Hall from 6 to 9 P. M.

The morning will be devoted to exhibitors session and butter scoring contest at the armory.

General Association meeting in the afternoon sessions in the afternoon and evening.

At 9 P. M. the Boosters will give a free dance at the Masonic Temple to all members. Admission by ballot.

Friday, February 8th—Armory exhibits open 8 to 12 noon.

Unit sessions.

This will officially close the meeting.

After 12 P. M. exhibitors will begin removal of exhibits.

The Boosters will hold only one general meeting together with banquet at the Hotel Columbia, Monday evening, February 4th for members only.

All Booster members are expected to be present.

Don't fail to attend to your reservations, but protect your own interest and to assist your officers in making this a real success.

C. J. W. SMITH, Secretary

BURNS JOINS ATLANTIC STAMPING CO.

W. H. Burn, vice president and secretary of Sturges Burn Manufacturing Co., and later vice president of Sturges Manufacturing Co., has associated himself with the Atlantic Stamping Company, Rochester, N. Y.

Mr. Burn probably is one of the oldest and best known milk can men in the country; not only from a manufacturing but from a selling standpoint. He has a wide circle of friends and acquaintances.

The Atlantic Stamping Company are to be congratulated in having one so well qualified as Mr. Burn to head the dairy division of their company, which besides the many dairy specialties already made by the company will embrace a complete line of milk and ice cream cans.

lard, according to announcement. This is triple the
of their former plant. Adequately to take care of
increased volume, the Cork Import Corporation was or-
d, with large financial resources, we are told to take
the sale of Non-Plus-Ultra Corkboard heretofore handled
J. Junius H. Stone Corp. It will be the policy of the
Cork Import Corporation, 345-349 West 40th St. New York,
very two million square feet of corkboard in their New
warehouse at all times to insure prompt deliveries, ac-
ing to officials.

Junius H. Stone will give his entire time and attention
r sales end of this new concern. The Junius H. Stone
will continue to manufacture and sell Rubbercork plas-
tulation for corkboard and piping, sectional cork pipe
ing for cold pipes, and Rubberstone floor covering, offi-
ay. Members of that organization believe no other
has contributed so much to the cold storage insulation
ss as has Mr. Stone. In 1892 the firm of Stone & Dur-
which Mr. Stone was the senior member, began pro-
solid cork blocks from loose granulated cork and heat,
ut the use of a foreign binder, so that Mr. Stone can
dited with producing the first commercial sheet of cork-
in this country, they say, adding that he has been re-
ble for a large percentage of the improvements made
hat date.

* * *

The Mojonner Bros. Co., Chicago, has moved into its
aylight factory, at 4601-21 W. Ohio St. With greater
pace and additional equipment officials say, the com-
s in better position than ever to give prompt and effi-
service. They have issued a card thanking their cus-
s for past patronage.

* * *

B. Mackay, general manager of the John J. Grothe Co.,
rn, Mass., spent a period of about twelve days on a
ig trip in the White Mountains in November. He re-
having brought down a nice deer.

At the Polo Grounds, the famous base-ball grounds in
New York, there is a large billboard which reads

"In 1922 "Pep" Young, New York, caught 280 flies.
TANGLEFOOT caught 50,000,000,000 flies." Tanglefoot
caught a great number of the latter in the dairy and ice cream
industries.

* * *

ESKIMO PIES AND PLAYER PIANOS

The following editorial appeared in The Star and Herald
of the city of Panama, under date of October 25, 1923.

Eskimo Pies and Ecuador.

"Panama is perhaps the farthest south that the Eskimo Pie
has traveled from the north, nevertheless, the Eskimo Pie has
had a great influence on Ecuador, where its delicious coolness
is unknown. We are soon to have Eskimo Pies made on the
isthmus in the well-known city of Colon and they are to sell at
just half the price now charged, but that has nothing to do
with Ecuador or the export of player-pianos from the United
States. The whole case is explained in an advertisement on
foreign trade placed in the New Orleans Times-Picayune by
five of the leading banks of that city.

"How many of you know what connection there is between
an Eskimo Pie, and the export trade in player-pianos? There
is a clear and close connection. It is this. Eskimo Pie, as you
know, is a slab of ice cream covered with chocolate. Chocolate
is made from cocoa. Ecuador, in South America, is the chief
producer of cocoa in the world. Just before Eskimo Pie ap-
peared in the United States, Ecuador was having a great deal
of trouble, because the market for cocoa was over-supplied.
The price of cocoa was so low that the cocoa raisers in Ecuador
could not get enough money for their product to enable them
to buy what they wanted.

"The Eskimo Pie supplied a new use for cocoa, and as it
immediately became very popular, millions of Eskimo Pies were
eaten in this country. As this increased the demand for cocoa,
Ecuador was able to increase the sale of her chief product and
to get a better price for it. Consequently, her producers were
abl to resume buying the things they needed, or wanted, one
of which was player-pianos. The invention of Eskimo Pie in
the United States actually improved the export of American
made player-pianos to Ecuador. It improved other lines of ex-
port trade at the same time.

"That may sound like a queer advertisement for banks,
but they know their business.

"Now you know about Eskimo Pies and Ecuador. What
about Eskimo Pies and Panama? They are going to be made
here. Milk and sugar and chocolate is used in the manufac-
ture of Eskimo Pies. Is Panama going to furnish the materials
or will they be imported from Ecuador and other countries?"

ADVERTISING IN THE ICE CREAM RIEW WHEN WRITING TO ADVERTISERS.

Power Consumption During Freezing Process*

By F. B. FULLMER**

IN order to ascertain the variations of the power demanded during the period that a charge of ice cream mix is in an ice cream freezer, and also to find the maximum power required during the freezing process, a set of electrical instruments were attached to the wires supplying current to the motor on a direct-connected, chain driven, forty-quart ice cream freezer.

The freezer chosen for the test was in perfect mechanical condition, insofar as freedom of moving parts was concerned. The mix came to the machine at a temperature of 39 degrees F., and the amount used was exactly twenty quarts each time and the amount of finished product recovered was forty quarts in each test, except the first freezing, which was thirty-nine and three-eighths quarts.

Time in Minutes.

The temperature of the freezing brine was maintained within one degree of zero: The mix contained eleven and one-half per cent of butterfat and thirty-six per cent total solids. All operating conditions were kept as near uniform as was possible with practical manufacturing.

The first freezing required one and three-fourths minutes longer than subsequent ones, hence none of the figures for that one are included in the chart or the table.

The friction load for the clean freezer, at the start was only about sixty per cent of what the friction load was after the freezer had been used and all ice cream drawn out that it was practicable to obtain. This was, to a large extent, caused by the small amount of ice cream that adhered to the walls of the freezer, which acted as a retardant to the action of the scraper blades. Some slight influence might have been caused by the freezer being colder after the first admission of brine.

All of the electrical readings obtained have been converted into the nearest convenient fraction of a horsepower freezing, all the readings for any particular period of the freezing process were surprisingly close; in fact at no time did there appear to be a variation as great as seven per cent.

Readings were taken every thirty seconds, but the tabulated results are given for even minutes only, as this gives close enough records for practical results.

A study of the results obtained demonstrates that there is a wide variation between the lower power demands at the start and the **peak load** just before drawing the finished product. The freezer used for the experiment was fitted with a 3 H. P. motor and it will be observed that it was over forty-four per cent overloaded at the completion of the freezing process. Had this freezer been equipped with a 2 H. P. motor (as some freezers of this size have been in the past) it would have been over 100 per cent overloaded.

The duration of the overload for the 3 H. P. motor was relatively so short that no material harm would result, but it emphasizes the fact that freezers should be in as perfect condition as possible, for with an undue friction load it builds up the overload very rapidly at

the end of the freezing period and causes an economic loss during the whole time that it is being used.

It also demonstrates that the occasional practice of overloading a freezer, i. e., using twenty-four quarts to mix in a forty-quart machine—not only has a tendency to strain the moving parts, but it will greatly augment the overload on the motor to the dangerous point.

Table showing load on a 3 H. P. motor directly connected with a 40 quart ice cream freezer.

Friction load, clean machine.....	2
Friction load, used machine after ice cream was drawn	2
End first minute	3
End second minute	2
End third minute	3
End fourth minute	1
End fifth minute	2
End sixth minute	2
End seventh minute	8
End eighth minute	1
End ninth minute	1
End tenth minute	2
End eleventh minute	1
End twelfth minute	1
End thirteenth minute	8
End fourteenth minute	1

At this point ice cream was ready to draw from machine and power consumption fell very rapidly.

ALABAMA PLANT MAKES REMARKABLE PROGRESS.

After incorporating with capital stock of \$10,000 in 1922, officials of the Perry Creamery Co., Inc., Tuscaloosa, Ala., celebrated their plant's birthday on September 1, by taking over plans for the installation of the newest and most modern machinery that could be found."

Officials say their plant now is one of the best equipped in the South. They made plans to construct a new building to take care of their business expansion. Capital stock will be increased to \$50,000.

J. I. Perry is head of the company. He has had considerable experience in the creamery business. He has been assisted by Chris Stollberry, secretary and assistant general manager.

The company recently acquired the plant of the Tuscaloosa Railway and Utilities Co.

The growth of the company has been in the face of many obstacles. Long hours of work resulted in the overcoming of many early troubles, the officials say. The first delivery was with a light Ford truck. The company now operates three large Dodge trucks and is planning to increase the delivery by the opening of the coming season, when it will occupy its new building. Present equipment is sufficient to turn out 1,500 gallons of ice cream, 600 gallons of milk and 8,000 to 10,000 pounds of butter a day. Shipments are made in all directions from Tuscaloosa.

* This article was published in the exposition extra issue of The Ice Cream Review, October 15, but on account of the crowded condition of that issue, it could not appear in complete form. For this reason it is published herewith complete.

** Chief Engineer, Golden State Milk Products Co., Writing for The Ice Cream Review.

Ice & Salt

The Nizer automatic electric refrigerating machine is revealed when end of cabinet is removed. Every part of the apparatus is contained in the cabinet. Installation in a retail store involves only making connections with standard electric and water lines.

Construction throughout is extremely rugged. All moving parts of the slow speed compressor run in oil. The cooling water, the refrigerant, the electric current and the lubrication are permanently and positively regulated by extremely simple automatic controls.

To the left is a typical Nizer installation. Four, six and eight-hole sizes are available. All are finished with monel metal tops and baked black enameled sides.

A booklet giving complete details and specifications is available on request to ice cream manufacturers.

News From Far and Near

CALIFORNIA

FLORIDA

Los Angeles, Calif.—The J. A. Christopher Ice Cream Company will lease for a period of twenty-three years a brick store and factory building which is being erected at 1107-9-11 East Fourth St. by George M. Ketscher, 1101 East Fourth St. The building is expected to be ready for occupancy in about two months and will cost in the neighborhood of \$15,000. The ice cream company, who will use the building and factory as a branch, will install equipment worth about \$20,000.

Charles City, Ia.—The work on the building for the Puritan ice cream plant is progressing rapidly. The building when completed will be one of the largest in floor area in the city.

Mason City, Ia.—The Hutchinson Co., of which J. F. McRaith is secretary-treasurer, with headquarters at Cedar Rapids, will open an ice cream manufacturing plant here, at Monroe Ave. and Sixth St., probably about the first of the year.

Kendallville, Ind.—The Puritan Ice Cream Co. was incorporated with capital of \$20,000. Incorporators are John Gerline, Scott Mills, and Ernest Wagner.

New Albany, Ind.—Plans for extensive improvements have been announced by the Huber Ice Cream Co. Ernest C. Huber is buying machinery to increase the output.

Wichita, Kan.—Edw. Newbold who has been with the Snyder Ice Cream Company for the past few years, has taken over the management of the Delicia Ice Cream Company of El Dorado. B. B. Simmons, formerly manager has been connected with the manufacture of ice and ice cream for the past 25 years. The plant of the company at El Dorado was built in the spring.

Baltimore, Md.—The Speelman-Couch Ice Cream Company has been incorporated to engage in the manufacture and sale of ice cream and milk products. The incorporators are: Edwin W. Wells, James P. McClurg and George William Couch. The authorized capital stock is \$25,000.

Boston, Mass.—H. P. Hood and Sons, well known ice cream and milk dealers, have taken over the ice cream plant owned by John Barton, operating under the name of the Liberty Ice Cream Co. John Barton will remain in the business as manager for the time being.

Detroit, Mich.—The Arctic Ice Cream Company, recent purchasers of the Michigan Ice Cream Company of Lansing, has taken over the plant of the Commerce Truck Co. of Detroit, according to word received at the local branch.

Maryville, Mo.—R. E. Evans, who had been engaged in the ice cream business, has gone to Tulsa, Okla., where he will engage in the same business. T. R. Cox will be in charge of the ice cream station that Mr. Evans conducted at Maryville and will be agent and manager in Maryville for the Jersey Ice Cream Company of St. Joseph.

St. Louis, Mo.—The Goldenrod Ice Cream Co., was recently incorporated by L. B. Phelps, 8481 N. Broadway; F. B. Hoing, 4532 N. Newstead St. and others.

Brooklyn, N. Y.—The B. & R. Ice Cream Company, has been organized with a capital of \$5,000. The directors are Gustav Brody and Ida Brody, 32 Morgan Ave., and I. Rashkin, 10 Lewis Ave.

Bloomington, N. J.—The Bairds Ice Cream Company incorporated recently with a capitalization of \$100,000. The following stockholders are mentioned in the certificate: Joseph W. Gormely, 50 shares; William J. Cleary, 50 shares; and Foster J. Smith, 50 shares.

Gastonia, N. C.—It is estimated that a loss of between two and three thousand dollars resulted from a fire of Honey Bee Ice Cream Co., on East Main St.

Washburn, N. D.—August Wahl, manufacturer of cream, sold his plant to E. R. Chambers of Raub, Wis.

Somerset, Pa.—W. H. Walker Co. will erect ice cream plant here at a cost of \$40,000. The McCormick Co., S. Neley Ave., Pittsburgh, is the architect.

Chattanooga, Tenn.—The Lookout Creamery Co., manufacturers of ice cream and butter, has opened for business. The company is a co-operative plant conducted by different drug stores of the city. E. C. Dickerson is president, E. Sanders is vice president, and A. E. Spradling is secretary-treasurer. New machinery and equipment have been stalled.

Oneida, Tenn.—J. G. Lampton, representing the Oneida Ice Cream Company, Danville, Ky., has been in Oneida looking for a location for an ice factory and ice cream factory combined. This concern is now operating a chain of such factories and they seek to get their product nearer the consumer by placing factories in likely places. Mr. Lampton stated that if a suitable location could be found he would have this factory in operation by spring.

Houston, Tex.—Carl Glitsch of Oklahoma City, Oklahoma, vice-president and general manager of the New State Ice Cream Company, has been made general manager of the Busch Ice Cream Co. here, valued at more than \$1,000,000. Glitsch will continue to act as general manager of the ice plant and cream factory in Oklahoma. Sidney A. Brutshe, assistant manager, has been promoted to manage the city interest there, and E. A. Luiteeler, traveling salesman with the cream department, becomes assistant manager.

Salem, Va.—The Salem Ice Cream Co., Salem, Va., has just a few weeks, announce plans for expansion and improvement. New machinery will be bought.

Tacoma, Wash.—The Royal Ice Cream Company has doubled its capacity with new equipment costing \$12,000. During August, the output rose to 1,200 and 1,500 gallons daily, distributed to 300 retailers in Tacoma and near territory.

Yakima, Wash.—The Yakima 'Dairymen's' Association has leased a building at Sunnyside, Wash., and will install equipment for refrigeration and the manufacture of ice cream. George V. Harris is manager of the association.

Milwaukee, Wis.—The Luick Ice Cream Company has moved into a four story garage and repair shop, 120x120 feet. Architects Leenhouts and Guthrie, 422 Jefferson St., is preparing the plans.

Of Great Importance!

U. S. Automatic Freezing Control and Recorder

Electrically Operated

Can be connected with the motor on motor driven machines or to any other convenient power or lighting circuit.

Automatically shuts off the brine when the mix inside the freezer has been frozen to a certain temperature, as adjusted by the operator.

Lights an electric lamp when the brine has been shut off to let the operator know that the mix has been frozen to the right temperature and is being whipped.

Makes a complete record on a circular chart to show the time and temperature at which each batch of mix enters the freezer, the minimum temperature to which it is frozen, the time required to freeze each batch, and the number of batches for any given time.

Any manufacturer can improve his product and cut down manufacturing costs by comparing these records from day to day.

There Are Many Other New Improvements

Offered in U. S. Heavy Duty Freezers, which have always been conspicuous in their being up-to-the-minute in every respect, and which every progressive ice cream manufacturer should consider, before deciding on his 1924 equipment.

Latest U. S. Heavy Duty Freezer
with the
New U. S. Automatic Freezing Control and Recorder

Shown and Demonstrated at the National Dairy Show in Syracuse, N. Y., and at the National Ice Cream Supply Men's Convention in Cleveland.

Why Colleges Teach Dairying

By PROF. W. A. STOCKING*

CORNELL UNIVERSITY represents one type of instruction in dairying, according to Professor W. A. Stocking, head of its dairy department, speaking before the World's Dairy Congress here this morning; Penn. State and Illinois represent another type.

The main difference between the two is that in New York, Ohio, and Wisconsin, the part which has to do with cattle is taught separately in a department of animal husbandry and the handling of milk and its products in a dairy department, while at institutions like Pennsylvania and Illinois both branches are taught together. Professor Stocking does not maintain that either plan is the better, since with either one the student may get instruction without being limited by questions of administrative detail.

All the colleges maintain herds for instruction or

research purposes, and most of these herds contain Ayrshires and Holsteins, while some have representatives of milking Shorthorns, though given institutions specialize on certain breeds, as Holstein at Cornell, and Jerseys at the Geneva Experiment Station in New York.

Some Specialize.

Local conditions may vary the emphasis in instruction; and markets, types of farmers, and other factors will bring out special lines in the education of institutions of the different states. For example, Wisconsin deals largely with problems of the cheese industry, Iowa pays more attention to butter, and New York deals mainly with the handling and marketing of milk.

The objects of the instruction may vary, but the main dairy students are trained to hold practical positions in dairy farming or manufacturing or, as investigators in commercial concerns, as teachers in colleges or as research workers in state experiment stations in the Federal Department of Agriculture.

* Excerpts from address before World's Dairy Congress by Professor W. A. Stocking, head of the dairy department of the New York State College of Agriculture at Cornell University, Ithaca, New York; born, Simsbury, Conn., Graduate Connecticut Agricultural College and Cornell University, specializes in bacteriology. Member Society of American Bacteriologists, Sigma Xi; past president American Dairy Science Association. Author pamphlets and "A Manual of Milk Products."

Swiss Agricultural Education

By A. PETER*

Switzerland is one of the countries having compulsory primary education and in addition has a relatively high number of secondary schools, colleges, and gymnasiums. Seven universities and a polytechnic school afford higher education.

There are four schools of agriculture (theoretical and practical) that train their students in two years and that in 1922 had 223 students enrolled. The winter schools of agriculture complete their programs in two courses of five months each. In 1922, these schools numbered 27 with a total enrollment of 1780 students. The agricultural population of Switzerland consists of

about a million people; in view of that fact the attendance at the agricultural schools might be considered quite satisfactory. The three dairy schools had some 111 students. The higher education of agricultural engineers is undertaken at the national polytechnic school at Zurich; in 1922, the department of agriculture had 141 students. The diploma of agricultural engineer from this institution is given upon the completion of six semesters of work; these graduates make use of faculties of the agricultural schools and the co-operative agricultural classes. Others are active in public affairs, for example, the Swiss Parliament, at the present time, is composed of agricultural graduates.

The government experiment stations and offices control number five, not including the dairy and bacteriological station which deserves special mention.

* Excerpts from address before World's Dairy Congress by A. Peter, director of the Government Dairy School in Rütli-Zollikofen and professor of dairying in the Federal Technical High School in Zurich. Received training in business and dairying in French Switzerland and in Sornthal. Member of the inspection committee of the Swiss Agricultural Experiment and Investigation Station. President of the Swiss Milk Commission 1917-22. Director of the Federal Milk Office, a war organization for arranging the distribution of milk and milk products. Author: Practical Directions for the Manufacture and Handling of Emmental Cheese; Dairying Under Swiss Conditions; Text-Book on Dairy Management.

The Keeping Quality of Butterfat

By GEORGE E. HOLM*

THE two changes that commonly occur in milk powder held in storage are tallowiness and fishiness.

The latter change occurs only when the moisture content of a powder is high and above the figure usually found in manufactured powders. The real problem is therefore concerned with tallowiness.

While this change is determined to a large extent by exterior conditions (temperature of storage, humidity, etc.) the tendency of a butterfat to become tallowy is largely dependent upon the state of the butterfat itself.

The conditions governing the production of tallowiness have been studied and it has been found that this state may be produced by an auto-oxidation or by exposure of a butterfat to light in the absence of free oxygen. In the presence of oxygen with the aid of light or metals as catalysts the condition is produced very rapidly.

The conditions governing the production of tallowiness have been studied and it has been found that this state may be produced by an auto-oxidation or by exposure of a butterfat to light in the absence of free oxygen. In the presence of oxygen with the aid of light or metals as catalysts the condition is produced very rapidly.

* Excerpts from address before World's Dairy Congress by George E. Holm, biological chemist, in charge milk powder investigations, Dairy Division, U. S. Dept. of Agriculture, B. S. Carleton College; Ph. D. University of Minnesota; Professor University of Minnesota. Has published some 20 papers on various subjects in the field of chemistry; and G. R. Greenbank, research chemist on Milk Powder Investigation, U. S. Dept. of Agriculture, Ohio State University. Chief of Chemical Engineering Laboratory, Goodyear Tire & Rubber Co., chief, Gas Defense Research Section, Chemical Warfare, Edgewood Arsenal.

and other unsaturated acids. These compounds (lipoic acid and pelargenic acid) do not produce a Kreis reaction.

Oxygen absorption may, therefore, be followed accurately by means of the Kreis reaction, and has been used to determine the degree of oxidation of butterfat.

All butterfats show a period of induction when exposed to oxygen (a period when no oxygen is absorbed). This period varies in length according to the age and quality of the butterfat used. Fresh butterfat at a temperature of 95 degrees C. requires a period of 10 hours before oxidation begins while an old fat requires less time.

In the presence of water vapor this oxidation proceeds less rapidly and the period of induction is increased. In the case of milk powder the same has been noted. Absolutely dry powder seems to come tallowy sooner than a powder with a low moisture content.

Two powders having different vapor pressures but the same moisture content will show minimum tendency to oxidation, not at the same moisture content but at the same vapor pressure.

Too high moisture causes fishiness.

As milk powder ages, its vapor pressure increases and if the moisture content is near the upper limit of keeping quality it may become fishy because of increased free moisture or increased vapor pressure.

Pure butterfat will become tallowy in the absence of free oxygen, especially if acted upon by light. Samples of milk powder sealed in vacuo and without access to light have become tallowy.

Storage in atmosphere of CO_2 or N_2 will not prevent the formation of tallowiness in butterfat or milk powder.

The latent conditions existing in butterfat make possible the production of tallowiness in butterfat. This has been studied.

Methods have been devised for removing this condition. Heating the butterfat in the presence of water (or steam distillation) up to a certain point, the thorough washing of a butterfat, will produce a butterfat with a keeping quality far superior to the free butterfat. Heating alone does not seem to be as efficient a method to accomplish the change.

NORTH DAKOTA DAIRY COMMISSIONER'S REPORT ON BUTTERFAT PRODUCTION FOR THE PAST 10 YEARS.

Butterfat marketed through cream stations for the past 10 years—beginning July 1, 1913 and ending June 30, 1923.

	Lbs. Butterfat	Total of
1913	3,726,374	\$ 87,711
1914	5,116,678	1,367,111
1915	5,777,687	1,453,000
1916	6,258,390	2,113,300
1917	7,315,859	2,901,000
1918	12,718,509	6,644,000
1919	11,768,276	6,426,000
1920	13,029,358	5,452,000
1921	17,019,869	5,583,000
1922	19,817,026	7,463,000

New Years
Greeting

1924

Success - and Happiness to you in 1924

BASICALLY, conditions in these United States of America now are better than they have been for years. As a mass we are down to brass tacks, and hard at work. We have largely recovered from the hallucination that business is good only when orders flow in without asking and demand exceeds supply. We have rather generally learned anew that business is normal when it takes selling to sell. And, getting back in the old selling harness to go after business with both fists, feels good. Makes the blood tingle! The thrill of fighting for and winning orders is again in our midst.

Of course the calamity howlers are still with us. But the great American majority is too busy to heed, or to take them seriously.

There seems ample reason for expecting great things in 1924 — not necessarily “boom” times, but steady improvements in general conditions — good, healthy normal business that will generously reward the fellow who keeps plugging right along and putting forth his best efforts.

We take this occasion, therefore, in all sincerity and in the conviction that you will realize on it, to extend our best wishes to you for Success and Happiness in 1924.

JANUARY 1924

ALL signposts point to good business conditions for 1924. Men in the ice cream industry look back upon the past year with varied feelings. It is always fascinating to look ahead—and quite proper.

Wise men also like to look back over their course at the end of the year. Somewhere in the backward journey they come across the bleached skeletons of mistakes that cost them something.

Mistakes can be made profitable. Look back for some of yours. Don't be afraid of them—face them, study out how they happened.

If they bob up in 1924 you will recognize them.

The situation facing the ice cream industry has resolved itself into a matter of eliminating unwise policies, foolish practices. That's the only thing that makes one hesitate to venture a prediction for 1924. Conditions are all right, opportunities are plentiful, and business is waiting to be developed. But if we make the mistake of crawling into our cages of self-conceit and depending upon individual initiative, every favorable condition possible won't prevent the industry's star of destiny from sinking so low all the king's horses can't pull it up.

THE South is setting up an ice cream aristocracy an aristocracy of quality. Action that commended the widest attention in the trade was taken at the convention last month of the Southern Association of Cream Manufacturers. Ice cream men in all parts of the country will watch with very great interest developments in the scheme launched by the Southern association to increase ice cream consumption by guaranteeing the public a quality product and keeping that guarantee before the eyes of the consumers.

Reduced to its simplest form, the action means that the association has moved to put quality ice cream on the South on such a basis that it can be definitely identified by a recognizable brand of merit, this to serve a two-fold purpose of putting a reward on quality cream and to develop greater consumption. It means that the manufacturers of the South have made a pledge of good faith with the public.

A section that has long lagged in proper appreciation of ice cream as a food will give this experiment the severest kind of a test. Success will be a remarkable victory for the first project of this kind attempted by the ice cream industry. It is easy to believe that the plan, in some form, will ultimately come through and recommend itself to application on a national scale. No one can complain over this proposition; the small manufacturer can make good ice cream as well as his neighbor. The bakers have had such a system in operation nationally for a couple of years, and other industries also have ventured upon this undertaking with success.

That the Southerners are moving in the right direction seems sure. Nothing could offer greater proof of the ice cream problems of the South are problems of circumstances and conditions, and not due to the personal shortcomings of the Southern ice cream manufacturers. As Prof. Baer stated at the convention, the quality of ice cream made in the South is much higher now than is generally understood.

It will be interesting to see what these gentlemen have to speak for the success of this idealistic project when the national association visits the South for its annual convention next year.

WITH another year passed into history speculation is rife as to the volume of ice cream produced in the past twelve months. In spite of conflicting reports, it seems sure that the total production figure will be found somewhere around the mark of 300,000,000 gallons, probably some less, but materially higher than last year's mark of 263,000,000 gallons.

It is interesting to note what different manufacturers have to say. One manufacturer said he didn't produce as much ice cream in 1923 as in the previous year. Asked how he knew, he said because he didn't make as much money.

Smile now and listen to another manufacturer. One said he **knew** he made more ice cream and was sure he made less money than the previous year. That's

another smile—a sad one of pity for people who just
not keep up with where they stand in operating

The second man was trying—in a half-hearted way,
doubt—to keep up with his figures. His grief proba-
bly came in trying to meet somebody else's price, a dan-
gerous trap that seldom misses a victim. But fortunately
nobody didn't meet one of these traps, or maybe
they were too wise to take part in that risky game of
hide and seek with the profit margin.

But there was much ice cream made last year, and
nobody made some money. You can feel pretty sure
the dealer got his. He always does. If you look over
your shoulder some day, you may catch one laughing
at you.

AFTER all, the important thing, from a production
standpoint is not the output for the year 1923, but
figures that will be written at the close of the win-
ter campaign. For a campaign really is still going on,
now; all the manufacturers didn't drop out and
leave their tubs in dry dock after the leaves began to fade.
It will be most interesting to see what happens this
winter. Optimists are looking for happy developments.
There are some very hopeful signs.

The man in Indiana, Kentucky or West Virginia who
faint-hearted sometime the middle of this month
can't think of the manufacturers in Canada, who, for
several winters, have been selling lots of ice cream in
the north below zero.

They had to get out and fight for business. So must
you.

WHAT about the iceless cabinet? Without pass-
ing upon the individual merits of the different
models now on the market, it seems fitting to say that
the iceless cabinet is destined to be a fixture. It prom-
ises to mark another step in the industry's progress.
The manufacturers who have studied the new cabinet
express the belief that its sponsors have a number of
things to work out before their innovation will be
either economically practical, but the opinion is
general that it is to be a permanent fixture.
The advent of the iceless cabinet is one of the trade
features of the year.

THE Ice Cream Review extends to its friends every
good wish for a happy New Year. We are grateful
for the co-operation of the past twelve months. Are
you satisfied with the past year? If you are, yes. Do
you expect good business for the ice cream industry in
the New Year? If you do, yes. Do we expect to encounter any
new problems in the New Year? Yes—everyone that you
encounter. Your biggest problem is ours. When we help
solve yours, ours will be solved.
With the co-operation and friendship such as ex-
isted between us in the past twelve months, we have no fear for

the future. Let this co-operation be generally applied
and there can be no fear for our industry. We have
an investment in our business. So it is something more
than mere conventional thoughtfulness when we wish
you

"A most happy and prosperous New Year."

THERE were some interesting conventions last month.
Members of the Pacific Ice Cream Manufacturers'
Association feel pretty well satisfied with their sojourn
in British Columbia, and the report of their conven-
tion, published in this issue, shows that good work was
done.

The Illinois association held its greatest convention
last month—greatest in every respect. Delegates from
all parts of the state attended this lively convention at
Chicago, and at its close went on their way rejoicing.

The Iowa association had a very interesting conven-
tion at Mason City, as also did the New York associa-
tion at Rochester, the Arkansas association at Little
Rock, the Indiana association at Indianapolis, and the
Metropolitan association.

This month there will be in convention the New
England association at Boston, the Mississippi associa-
tion at Laurel, the Kansas association at Wichita, the Ohio
association at Columbus, the North Carolina association
at Winston-Salem, the Louisiana association at Baton
Rouge, and the California and Southwestern States asso-
ciation at Los Angeles.

CHEAPER dairy products is a matter uppermost at
this time and has been for some time. Convention
speakers have gone into the subject at great length this
fall and winter, and still no satisfying conclusion has
been reached.

This is interesting in that it shows that, in some way
or other, we are continually seeking out various little
trade angels and finding that they all have more or less
direct bearing upon that most important problem of
making the public eat more dairy products.

To the ice cream manufacturer cheaper dairy prod-
ucts doesn't mean merely a certain amount of relief
from cost problems, though that is important; they also
mean greater public popularity for his product. Dairy
products are not competitive with each other. The man
who properly appreciates the food value of milk, butter
and cheese is very likely to appreciate the food value of
ice cream.

We shall have cheaper dairy products when there
are more dairy cows on the farms. Then we shall see
greater consumption.

Paradoxical as it may seem, dairy products are
cheapest where consumption is highest, not necessarily
considering ice cream in this connection, though. When
dairying becomes more nationalized, we can depend up-
on lower prices.

Following up this trend of thought it is astonishing
at how invariably we get back to elementary problems—

the cow and its proper recognition, the farmer and his indecision, the public and its lack of dairy education.

After all, the ice cream industry, though styled by its members as an individual industry in itself, is linked up in the thread of dairy problems, and still is grappling with first principles. The encouraging feature, though, is these first principles mean virtually everything—lower production costs, higher quality, greater consumption, more profits.

All that is necessary to unravel the thread is to get the cows on the farms, farmers busy and the public interested in dairying as an agent of prosperity and in dairy products as wholesome, body-building food commodities.

In any branch of the dairy industry we can never get very far from the cow, the farmer and the public. They are the dairy manufacturer's ruling triumvirate.

ONE of the outstanding conventions of the past month was that of the Pacific Ice Cream Manufacturers' Association. The manufacturers of the Far West journeyed up to Vancouver on business bent. That visit with their British cousins was very profitable.

The Pacific organization is one of the ranking bodies of the industry. It is accomplishing things, having big, broad men behind it. The 1923 convention showed that the men of the coast are looking forward.

Theirs is a big country, with vast trade possibilities. They plan to make something out of it in ice cream way. Co-operation such as they are showing won't be denied.

Keep your eyes on the Pacific coast, the Pacific association,—and the men behind it. They bear watching.

IT was only to be expected that the Southern Association of Ice Cream Manufacturers would arrange its 1924 convention so its members could give the greatest possible co-operation to the national association when that body meets at New Orleans.

In deciding to meet at New Orleans, just before the national convention will be held, the manufacturers of Dixie were mindful not only of their obligation to their expected guests, but also were conscious of the opportunity to strike a strong blow for the industry. The Southerners show a gratifying understanding of the important work the national association has before it. True to their traditional chivalry and highly developed spirit of hospitality, their first thought was of their duties as hosts.

Then their proverbial pride would not let them overlook this opportunity to help make the first national convention to be held in this section one long to be remembered as a success in every way.

There now is conclusive evidence that the 1924 national convention will be one well worth everyone's consideration. New Orleans, "America's most interesting city," will be the scene. National delegates, it is assured, not only will be the guests of their vice-president and the hospitable gentlemen of New Orleans, but also of the entire Southern ice cream industry.

THE next national convention will be held at New Orleans November 17, 18, 19 and 20, 1924. Dates were announced late in December by Secretary N. Loewenstein. The Southern convention will be held at New Orleans November 14 and 15, with the delegates remaining over for the national sessions. The association says there will be a national exposition. It is time to begin work toward making this the ice cream trade gathering in history.

YOU will find plenty of good reading matter in this issue. The January number of The Ice Cream Review carries a record amount of convention proceedings, having visited all the associations that were in session last month.

Even if you did attend your own, you will find reading what the "other fellows" had to talk about.

BULLETIN OF EVENTS

- Mississippi Ice Cream Manufacturers' Association**—Annual Convention, Laurel, January 8 and 9. Convention headquarters, Hotel Pinehurst. Secretary, N. D. Brookshire, Meridian.
- Nebraska Ice Cream Manufacturers' Credit Association**—Convention, Omaha, January 10 and 11, 1924. Secretary, McGinnis, Lincoln.
- Minnesota State Association of Ice Cream Manufacturers**—Annual Convention, St. Paul, January 10 and 11. Convention headquarters, Hotel St. Paul. Secretary, J. J. Farr, Hamm Bldg., St. Paul.
- California and Southwestern States Ice Cream Manufacturers' Association**—Annual Convention, Catalina Island, January 11 and 12, 1924. Convention headquarters, St. Catherine Hotel. Secretary, Robert F. Grosse, 5792 San Pablo Ave., Orange, Cal.
- North Carolina Ice Cream Manufacturers' Association**—Convention, Winston-Salem, January 15 and 16, 1924. Convention headquarters, Robert E. Lee Hotel. Secretary, E. Dixon, Fayetteville, N. C.

RETINNING THE

Electric Weld

No Solder
No Rivets
No Leaks

JOHN WOOD MFG. CO.,
Conshohocken, Pa.

GENTLEMEN:

Replying to your favor of the 7th inst.

To be perfectly frank with you we would prefer to receive all "Electric Weld" cans as they are much easier retinned than the soldered can. We are always glad to put in a word for the "Electric Weld" can with our customers.

On a sufficient quantity of "Electric Welds" we would be glad to make a reduction of at least 20% from our price on the soldered can.

Assuring you that we will be glad to co-operate with you in any way, we are

Yours very truly,

Name furnished on request.

The above is one of many similar letters we have received from retinners, quoting from 20 to 30% reduction in retinning "Electric Weld" cans.

Retinning lengthens the life of cans. If you are not in touch with a retinner who will give you the above concession—Write us

JOHN WOOD MANUFACTURING CO.
CONSHOHOCKEN, PA.

Mississippians Ready for Snappy Convention

Laurel Will Entertain Members of Mississippi Ice Cream Manufacturers' Association January 8 and 9

"OLE MISS" is calling her own, and everything is in readiness for the annual convention of the Mississippi Ice Cream Manufacturers' Association. The convention will be held at Laurel. Hotel Pinehurst will be convention headquarters.

The Mississippi association is noted for its family spirit. N. C. Pearson and G. W. Barrett of Laurel promise that this tradition will be lived up to in every particular. They promise very pleasing entertainment features.

Officials of the Mississippi association are looking for a large attendance. The convention program, announced in this issue of The Ice Cream Review, covers a wide range of problems affecting the ice cream industry of that state, as well as timely matters of broad and general interest.

The Mississippi association has probably a stronger following among supplymen than any other state association in the South, with the possible exception of the North Carolina association. The supplymen who have been regular attendants of past conventions have pledged President S. N. Sutton of Vicksburg their heartiest support toward the success of the coming convention. Mississippi is the home of that popular supplyman, Byron H. Morris, retiring vice-president of the Dixie Flyers.

The secretary of the association, N. D. Brookshire of Meridian, is highly optimistic over the convention outlook. He believes it will be "the best we've ever had in Ole Miss." Mr. Brookshire, who keeps his fingers on the pulse-beats of his members, says correspondence indicates strong interest in the coming convention.

"It never looked better," he said in a recent statement to The Ice Cream Review. "We have always been proud of our conventions, but it seems that this year we are going to put over one that will give everybody cause for pride. I'm satisfied with the convention program. I had a thorough understanding with our officers, executive committee and representative members at large in framing this program. We have the speakers we wanted, and we are sure that they will have something of real interest to all of us."

"A Willing Spirit Shown."

"We have some troubles to work out in this state, and now is the time for us all to get down to business and work them out. Everybody is showing a willing spirit. There is a broad sentiment for complete understanding, bettering quality and keeping our business practices up to the highest standard. We have been making good ice cream in Mississippi for several years, and we are going to make product that will compare with the best anywhere."

"Our association has proved that co-operation pays. We are all satisfied with results. Everybody has regained everything put into the association in the way of co-operation."

"Mississippi ice cream manufacturers realize their obligation to their industry, their business, their fellow manufacturers and the public at large. We must keep faith with ourselves and our public if we are to make the greatest gains."

"I feel sure that our members to a man will keep faith with our Laurel friends and journey over that way for a good convention and a splendid, hospitable reception."

Messrs. Sutton and Brookshire are serving a second successive term, as also is Vice-President Seale:

The city of Laurel seems to be behind the local manufacturers in their efforts to make the visit of the cream men enjoyable and profitable. Local civilians and different civic organizations have given co-operation to Messrs. Pearson and Barrett.

Laurel Ready.

The Laurel manufacturers are well-known in trade. Mr. Pearson was a charter member of the Southern Association of Ice Cream Manufacturers, attending the organization meeting at New Orleans eleven years ago. Mr. Barrett has been co-operating loyally with fellow members of the industry.

The city of Laurel is one of the most up-to-date in all of the larger cities in Mississippi. It has a population of about 20,000, a growth of about ten thousand in the last eight years.

It is one of the prettiest cities in a state far-famed for its beautiful towns.

Among the familiar faces at Mississippi conventions, most of whom no doubt will be on hand this year, are such popular supplymen as R. C. Marine, Bessire & Co., Atlanta; Theo. Bernstein, Blanke Manufacturing Co., St. Louis; Mr. Hood, York Engineering Co., Jacksonville; Ben Duncan, Memphis; Byron Morris, Jackson; Dr. H. Brown, Memphis; Herman Allenberg, Alco Condensed Milk Co., Memphis; Gordon Moumblo, Turnbull & Co., Machine Co., Chattanooga; Roy S. Jennings, Cream Package Co., Atlanta.

Clopton to Speak.

A feature of the program will be an address by W. Clopton, secretary of the Southern Association of Ice Cream Manufacturers. Mr. Clopton's subject will be "Co-operation Between State and Southern Associations." He also is expected to tell the Mississippians something about the co-operative advertising program launched by the Southern association at its recent convention.

Mr. Clopton spoke at the Mississippi convention last year, his address being a principal feature.

The association's annual banquet will be held on the evening of the first day at the Hotel Pinehurst. The first of the convention program come at noon on January 8, after which delegates will take luncheon together. This will be followed by an auto ride at 2 p. m.

Committee reports, new business and election of officers will feature the afternoon session, which in the evening will be followed by a business meeting.

Laurel, Miss., the Pasadena of the South.

Laurel has more capital invested in manufacturing than any other Mississippi city, and is the largest rubber manufacturing center in the world. Laurel is located in the southeastern section of the state, about fifty-five miles from Meridian, and about ninety miles from Jackson, Mobile and Gulfport, and one hundred and thirty-six miles from New Orleans.

The climate and health conditions of this section are almost ideal, winter and summer temperature being always modified by the breezes from the Gulf coast. Laurel is becoming a very popular winter golf center.

Badgers to Meet in Milwaukee

Extensive Plans Being Made for Annual Convention at Hotel Plankinton, January 23 and 24
Badger Flyers are Co-operating

WISCONSIN ice cream manufacturers and their friends, the Badger Flyers, are laying plans for a happy occasion when the annual convention of the Wisconsin Association of Ice Cream Manufacturers is held at Milwaukee, January 23 and 24. The Hotel Plankinton will be convention headquarters.

Inquiry at that establishment by a representative of The Ice Cream Review recently revealed the information that hotel officials are looking for a large registration.

President S. J. Dufner passed the word to the officers and members of the Badger Flyers early in December. The Flyers lost no time in getting to work. President J. I. Purvis of Appleton says plans are rapidly shaping up for the part his organization will take toward the success of the convention.

Arthur E. Mory of Appleton has succeeded his brother, Karl, as secretary of the association. Mr. Mory believes there will be a large attendance.

A program recently announced by Mr. Mory is sure to be read with interest. It appears elsewhere in this issue. It covers a number of important subjects and provides for speakers who have made good before.

After the mayor of Milwaukee welcomes the Wisconsin ice cream men, delegates then will hear the response of Howard Carver, after which they will get down to business in a round-table conference.

All of this comes in the afternoon of January 23, after the delegates have partaken of a luncheon, which

will be featured by the singing of songs to be provided by The Olson Publishing Co.

The session Thursday morning, January 24, will begin at 10 o'clock. The first speech will be "Mechanical Refrigerated Cabinets," by F. B. Riley, Detroit Creamery Co., Detroit, Mich. J. Fess of the Tri-State Ice Cream Co., La Crosse, will then speak on "Pasteurization a Safeguard to the Public." H. W. Gregory, president of the association, will then speak on "The Ice Cream Industry in the United States."

City Hall Square, Milwaukee.

due University, LaFayette, Ind., will discuss "Experiments in Overrun on Ice Cream."

At 2 o'clock Prof. H. H. Sommers of the university will hold forth, followed by A. Krohn of the Mel-Chicago Cream Co., Plymouth, who will speak on "Vanilla."

He will be followed by N. Loewenstein, secretary of the National Association of Ice Cream Manufacturers, and then will come the reports of committees and election of officers. Edward Klinenburg, Chicago, will speak on "Electric and Gas Trucks."

O. E. Harwood, secretary of the Badger Flyers, announces that the entertainment committee has completed arrangements which should please the manufacturers and their ladies.

Ohio Manufacturers Face Important Convention

Constructive Business and Lively Social Features Mapped Out for Convention at
Columbus, January 31 and February 1, 1924

ARRANGEMENTS are complete for the annual convention of the Ohio Association of Ice Cream Manufacturers, which will be marked by a good business program and social features, according to announcement by Secretary W. A. Wentworth of Columbus.

The convention will be held at Columbus Thursday and Friday, January 31 and February 1. Hotel Deshler will be convention headquarters. The ice cream con-

Food and Dairies, Department of Agriculture of Ohio; J. H. Randolph, president of the Ice Cream Manufacturers' Association of West Virginia; Dr. Thomas E. Downey of Mellon Institute of Industrial Research, Pittsburgh; J. Kindelberger of the Kalamazoo Vegetable Parchment Co., Kalamazoo, Mich.; Prof. R. B. Stoltz, in charge of dairy manufacturing at Ohio State University, a representative of the ice cream supplymen's association, to be selected by the supplymen. Speakers that had not been determined upon late last month will be secured to discuss "The Application of Business Principles to the Ice Cream Industry."

The evening of January 31 will be taken up with a theater party at Keith's and dancing, later, at the Deshler, with refreshments. This entertainment feature was so popular last year that it was decided to repeat it.

The second day of the convention will be given over largely to round-table discussions for members of the association only. Much time will be devoted to the discussion of refrigerated cabinets, the subject to be directed by J. H. Schindler of the Telling-Belle-Vern Co., Cleveland. The matter of legislation will be thoroughly discussed, with J. J. Schmidt of the Cline Ice Cream Co., Athens, O., leading.

S. M. Ross of the Crane-Ohio Ice Cream Co., Columbus, will direct the discussion of "Ethics in the Sale of Ice Cream." This will be followed by the introduction of what subjects members may wish to bring up for discussion.

The whole day will be devoted to consideration of problems of this kind. Among other subjects which probably will come up are: Mutual advertising, the adoption of an ice cream day or week in the year, and the providing of ice cream on some selected day to orphanages similar to that plan being conducted by the North Carolina Ice Cream Manufacturers, through its bright secretary, Arthur E. Dixon.

This will be followed by committee reports and election of officers.

vention will be part of the convention of the Ohio Dairy Products Manufacturers.

Convention plans call for the ice cream men to join with the creamery association and the milk distributors' body in a joint banquet on the evening of Wednesday, January 30. Senator S. D. Fess will be the principal speaker at the banquet. He will then deal with conditions in Europe as affecting American business.

A feature of the evening will be an entertainment in the nature of a demonstration of the work being done in many parts of the country toward increasing consumption of dairy products.

The same play given before delegates of the World's Dairy Congress at Philadelphia will be presented to this end: It is entitled "Health Circus." Other entertainment features are being worked out, the secretary advises. He says the banquet will be an advent of "great importance to the industry of this state."

West Virginia President To Speak.

Principal speakers for the first day of the convention are: Hon. Arthur McWilliams, chief of the Division of

Memorial Hall.

Union Depot.

Nebraska Association to Meet This Month

NEBRASKA ice cream manufacturers got up from their Christmas dinners and wasted no time in preparing for the annual convention of the Nebraska Ice Cream manufacturers' Credit Association. The convention will be held in Omaha sometime between January 10 and 15, according to tentative plans drawn up at a meeting of officers and directors early in December. The meeting was held at Secretary R. W. McGinnis' stronghold in Lincoln. A committee was then appointed to take up convention arrangements. President L. E. Hurtz is chairman of the convention.

Nebraska meetings are always in the nature of practical business meetings, without the color and flourish of the usual state convention, but very productive results. Secretary McGinnis has helped this association put under way very good work for the advancement of the industry in that state. This year he worked with the fullest co-operation of President Hurtz of Omaha.

John Gumb, Omaha, is vice-president. Directors are C. E. Clark, Ravenna; G. I. Reed, Randolph, and J. H. Dodds, Superior.

Georgia Honors Supplymen

Resolution Recognizing the Supplymen and their Importance to Organization, Adopted at Atlanta Convention

SUPPLYMEN covering the Southeast will feel more at home when they reach the "red old hills of Georgia," as a result of action taken at the annual convention of the Georgia Ice Cream Manufacturers' Association at Athens November 30.

Welcome to all supplymen in that territory was assured in a resolution adopted at the convention. The resolution set forth the fact that the association "recognizes the importance of supplymen to organization," and it provided that at all further meetings each member of the association bring along an order book and reserve one order to be given at the meeting. The Georgia association meets four times a year, and so it is easy to see just how elated are the ice cream "roadsters" of that section.

The convention was in the nature of a winding up of the association's affairs of the past year. Officers and members were highly pleased with results of their quarterly meetings in the past year. This plan was inaugurated at the annual convention at Macon in December, 1922. At that time the association, which then was known as the Tri-State Association of Ice Cream Manufacturers, re-organized, left Alabama and South Carolina to form associations of their own, and went forward upon a program to develop co-operation in Georgia.

Quarterly Meetings Held.

Quarterly round-table meetings were held in 1923 at Macon, Savannah and Columbus, with the Athens meeting coming as the annual convention.

Speakers were unanimous in their belief that more

good work had been done toward establishing better understanding among Georgia ice cream manufacturers in the past year than in the previous ten years. Another quality of ice cream is being made and business practices are of the highest order as a result, it was declared.

The hospitality of M. J. Costa, former president of the association and 1923 president of the Southern States Association, was an outstanding feature of the convention. The "Cracker" manufacturers were in Athens by invitation. The meeting was held at the plant of Joe Costa Co. Active and associate members were dined at the restaurant the Costas recently opened.

Following the meeting the members were entertained at the football game between the University of Georgia and Centre College's widely press-agented team. The Georgia players made the ice cream men happy holding the visiting eleven to an even score, 0-0.

Among those attending the meeting were President J. D. Kinnett, Macon; Fred Senalin, Atlanta; Secretary Sam Marshall, Albany; the senior and junior George Sankens, Augusta, and James J. Harvey, Atlanta.

The next annual convention will be held in Atlanta sometime in December, 1924.

OHIO MANUFACTURERS FACE IMPORTANT CONVENTION.

(Continued from page 12)

No Exhibition Requested.

There probably will not be the usual exhibition of supplymen that has marked Ohio conventions in the past few years. A recent meeting of the board of directors resulted in the decision that the exhibition should be discontinued. Supplymen, however, are assured of a welcome at the convention.

"This action simply has been taken to obviate a feeling that might prevail among the supplymen that they are under obligations to make such an exhibit, and leave it entirely optional with them as to displays and the individual arrangements thereon," explains Secretary Wentworth.

Mr. Ice Cream Manufacturer

Your Absolute Security

is

Pleased Customers

Do you realize the *daily irritation* of your customers when they see in their own stores the mess made that is practically inseparable from loading the ordinary cabinet?

A small irritation constantly repeated often results in a lost customer.

You can get your customers to feel and talk like these if you couple DRY-ZERO CABINETS with *your* Ice Cream:—

— STATEMENTS OF USERS —

J. WHITTINGTON,
6132 Pasadena Ave., Los Angeles, Calif.

"I should say they are good. Keep the ice cream in good condition for forty-eight hours on one packing. I would positively insist on that kind of cabinet, no matter what kind of ice cream. The other cabinets you have to pack three holes, in the Dry-Zero you pack only one. Eliminate a lot of mess, and only take a bucket of ice per day for a 2 hole 5. Sometimes less than that. Like the Dry-Zero because it is handier and easier to handle the ice cream. Wouldn't go back to any company that can't supply me with Dry-Zero ice cream cabinets."

H. I. BENNETT,
Cash Grocery, 627 Chestnut Avenue,
Los Angeles, Cal.

"Certainly is a dandy cabinet all right. It's a pleasure to handle ice cream since we got this cabinet. Had just the opposite kind of a time before. Handled ——— cabinets. Cream was just like mush all the time. ——— ice cream was all right, but it was the cabinet. Couldn't get my money out of the ice cream before."

And scores of others of a similar nature.

Yet on top of achieving this, your DRY-ZERO CABINETS will cut your delivery costs by an amount equal to the cost of your cabinets, each year of service.

This is not merely "advertising talk"—it is cold fact—and we proved it at the Cleveland and other conventions, as well as daily in nearly every State in the Union. And we'll let you prove it for yourself.

Please your customers and save your delivery costs.

Let us ship you a Dry-Zero Universal cabinet, subject to your approval after test is made in your plant.

Carolínians Face Lively Convention

Winston-Salem Will Entertain Tarheel Delegates to Annual Convention of North Carolina Association of Ice Cream Manufacturers—President Landreth Promises Entertainment Features—Supplymen to Co-operate

ORTH CAROLINA ice cream manufacturers were getting ready, late last month, for their annual convention at Winston-Salem, January 15 and 16. President Charles E. Landreth and his fellow manufacturers will be hosts. The president reports preparations have been made for a large attendance. He impresses delegates the importance of making early reservations.

Hotel Robert E. Lee will be convention headquarters. Accommodations also will be available at the Zinzen Hotel.

Secretary R. E. Dixon, in announcing the elaborate program that appears elsewhere in this issue, says there is every indication that the Winston-Salem meeting will be one of the best on record.

Extraordinary entertainment plans are being worked out. The Carolina association has long held an enviable record among leading state associations of the in-

of the convention suffer. Business will be the order at every session, and the speakers engaged for the convention are expected to cover much ground in the ice cream manufacturing business.

Program Features.

Among the important program features are addresses by W. P. Abel of the Impruv-Mix Co., New York; Dr. James Heald, city food and milk inspector, Winston-Salem; N. M. Thomas, president of the Salesmen's Club of The Association of Ice Cream Supplymen; and W. J. Shuford, Cawba Creamery, Hickory, N. C. The reports and addresses of officers, of course, will hold much interest. H. R. Dwire, editor of the Winston-Salem Sentinel, will deliver the address of welcome. He has a wide reputation as an orator. He stands high among members of "the fourth estate" of North Carolina. H. P. Olsen, president of The Ice Cream Review, will address the convention.

One of the feature addresses will be one by J. A. Arey, of the North Carolina Department of Agriculture on "Dairy Progress in North Carolina in Past Ten Years."

"Preparations are going rapidly forward for our convention," according to A. E. Dixon, the association's highly esteemed secretary, in a statement late in December to The Ice Cream Review. "It promises to be one of the largest in attendance of any of our state conventions. Naturally, we are making greater prepar-

Robert E. Lee—Convention headquarters. Erected at a cost of \$1,000,000 financed entirely by public subscriptions of Winston-Salem citizens.

for live, snappy conventions, and the association is needed for its entertainment features. This side of the convention will take on greater form than ever before, according to officials. A new feature will be a dinner-dance. This will be in connection with the banquet, which will be held on the first evening of the convention instead of the last evening, this dinner from custom being done so no one would miss the banquet through having to leave town early.

The dinner-dance was part of the entertainment program drawn up at a meeting of the committee on these arrangements, which recently got together at Greensboro.

The second night of the convention will be taken up with a visit to Neil O'Brien's minstrel. Officials are by no means letting the business side

ations than ever, and our president, Mr. Landreth, deserves much credit for his efforts."

North Carolina, long regarded not only as one of the most progressive states in the South, but also in the entire Union, has been coming to the forefront rapidly in late years. It is making the most rapid progress of any Southern states in the development of dairying.

The North Carolina Ice Cream Manufacturers' Association occupies a place in the forefront of leading associations of this industry. Its annual conventions are always up to the highest standard in every way. The principal reason for the association's good work lies in the close co-operation of its members. Secretary Dixon has held remarkable control over his members, and regardless of the nature of the event, he generally gets a generous response.

In 1921 the Southern Association of Ice Cream Manufacturers offered a prize to the state association with the greatest representation at the annual convention. North Carolina had a representation of 100 per cent of its membership, walking away with the honors.

The majority of the officers and board of directors appeared at the national convention, as also most of the members. North Carolina had probably the best representation at the national convention of any other Southern state, with the possible exception of Tennessee.

Delegates this year are sure to do everything they can for the entertainment of George L. H. White at Winston-Salem. Mr. White, for three terms president of the association, made it possible for the convention at Raleigh last year to surpass everything heretofore undertaken. The Raleigh convention will long be remembered.

President Charles Landreth says the Winston-Salem

convention likewise will stand out for many years in the memories of all who attend.

Suppliers Important Factors.

A feature of the convention not to be overlooked is the part usually played in Carolina conventions by the "Yaller Dawgs." This organization, which is composed of red-blooded gentlemen anything but yellow, contributes much to the success of the Carolina convention.

Among its leading lights are such well-known suppliers as John J. Kennedy, Southern Cream Co., Richmond; Roy S. Jennings, Creamery Package Co., Atlanta; Al. Isaacs, Keystone Fruit Products Co., Cincinnati.

Old Salem Tavern—One of the many buildings in the historic section of the Twin City. George Washington used this building as headquarters during his visit to the State of North Carolina.

Fifty years ago Winston-Salem was a mere village with less than a thousand inhabitants. In 1920 it became the largest city in North Carolina, and one of the fifty largest industrial cities of the entire country.

As to its future, it is reasonable to assume that the factors which have been responsible for these increases in its population and in its commercial and industrial importance during the past will continue to influence its growth to the same degree during the next ten years. Upon this assumption, Winston-Salem should become a city, by 1930, of from 90,000 to 100,000 inhabitants. This is the estimate of the expert who made the Winston-Salem City Plan.

Historical.—(From Winston-Salem City Plan)

"In 1750 Lord Granville sold and conveyed a tract of the choicest land in the Colony of Carolina to the Moravians who sought in the wilds of Western North Carolina a home where they could worship according to their own consciences and the customs of their fathers. In 1766 they established their principal settlement almost in the center of this tract and a

How Much Does It Save?

the ABC Refrigerator Motor Truck Body or on is a money saver, particularly in ice creamery, is well known; it is readily apparent to ABC user after a few months' — even a few s' — operation of his first ABC unit. The of the saving effected, however, often is restimated.

have consistently advanced the claim that, *in and salt alone*, the ABC Refrigerator Body will its purchase cost during the first season's opera-

rove the reasonableness of this claim and to rate, in a measure, the economy of delivering cream in the ABC way, the Columbus, Ohio, h of the Telling-Belle Vernon Company very

kindly co-operated with one of our engineers in taking accurate, detailed records of the operation of one of their 3½ ton ABC Refrigerator trucks as compared with one of their 2-ton open type trucks. A series of four full-day tests was run between these two trucks by alternating them over the same route, July 27, 28, 30 and 31, 1923. During this period the average temperature reading was 74° and the average humidity 67%. (Please note that average temperatures were taken for full 24-hour days; daylight temperatures, and particularly sun temperatures, were far higher.)

The following is a brief recapitulation of our engineer's report. Anyone interested is invited to write to our St. Louis office for a copy of the full report in detail:

	2 days with 3½ ton ABC	2 days with 2-ton Open Type
Total time required to supply route, including loading and unloading	16 hr. 35 min.	21 hr. 1 min.
Actual time supplying route	14 hr. 42 min.	18 hr. 24 min.
Actual time loading and unloading	1 hr. 39 min.	2 hr. 5 min.
Actual time serving stops	10 hr. 6 min.	14 hr. 14 min.
Total crushed ice used	10,950 lbs.	13,500 lbs.
Total salt used	1,363 lbs.	2,110 lbs.

is important to observe that the ABC Refrigerator unit used is a 3½-ton truck, ordinarily a more nbersome vehicle to handle than a 2-ton truck, and a greater ice and salt eater. **EVEN SO, COM-
PARISON OF THE ABOVE DATA SHOWS THE FOLLOWING SAVINGS EFFECTED BY THE
ABC-EQUIPPED TRUCK:**

Total time	4 hr. 26 min.
Time supplying route	3 hr. 42 min.
Time loading and unloading	26 min.
Time serving stops	4 hr. 8 min.
Crushed ice	2,550 lbs.
Salt	747 lbs.

vide the above savings by 2, then multiply by the average number of days in your ice cream season, l you will have a conservative estimate of what the ABC Refrigerator Body can do **FOR YOU**.

IMPORTANT: Be sure that the refrigerator body you are buying is a genuine ABC. Ask the repre-
sative with whom you are negotiating whether the body he sells is **BUILT BY ANHEUSER-BUSCH
ST. LOUIS.**

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

it Salem. The first activities, after providing suitable church facilities, were provisions for education and actively engaging in several lines of manufacturing, notable for that day. The settlement was noted for the efficiency of its citizens and by 1776 had become an industrial center of considerable extent and variety of products. It was incorporated as a town in 1856. In 1849 the General Assembly of North Carolina established Forsyth County from a part of Stokes, and appointed five commissioners to administer its affairs. The Moravian Church sold the commissioners fifty-one and a quarter acres immediately north of Salem, at \$5.00 per acre, and this tract was at once divided into lots, exclusive of the Court House Square, and sold at public auction and at an aggregate price of \$8,883.50. The new county seat was named Winston in honor of Maj. Joseph Winston, a hero of Revolutionary fame. It was incorporated as a town in 1859. The towns, Salem and Win-

ston, then a mile apart, grew together into one, though until 1913 under separate municipal governments. In every other respect, however, commercially, industrially, and socially they have constituted a monious people, with aims, purposes and efforts united and the same. By common consent and custom in recent years, they have been known to the world as one city, Winston-Salem, and this fact through their consolidation in May, 1913, by a large majority vote of the citizens of each municipality.

"The industrial development of Winston began with the first tobacco factory which was built in 1874. During the intervening years Winston-Salem has developed into a modern city with many attractive conditions of prosperous, healthful and happy living, and it has become the industrial metropolis of the Carolinas, with a wide diversity of manufactured products amounting to an annual factory output of tremendous value."

Kansas Manufacturers Ready for Convention

All in Readiness for Gathering at Wichita, January 22 and 23—
Jack Rabbits Active—Exhibition Announced

ICE cream manufacturers of "the land of Jack Rabbits" have been busy the last few weeks getting ready for the annual convention of the Kansas Association of Ice Cream Manufacturers, which will be held January 22, 23 and 24 at Wichita, with the Broadview Hotel as convention headquarters.

The importance officials attach to this convention has created wide interest, letters to the secretary indicate. Kansans received with much interest the announcement in an early issue of The Ice Cream Review that the convention this year will cover a period of three days instead of the customary two-day sessions. This has been made necessary, officials say, because of the growing attendance and the varied subjects the members want discussed, making it impossible to squeeze into the two days all the convention work and have time fully to enjoy the entertainment features offered by the Kansas Jack Rabbits, the association's very active organization of associate members.

Officials of the convention hotel have been instructed to make arrangements for heavy registration. Arrangements also have been made for an exhibition by suppliers, the exhibits to be held in a hall in the hotel. B. T. Perkins, veteran secretary of the Kansas association, has advised the suppliers that there is plenty of space.

The management has given the convention the use of the entire roof garden of the hotel for convention

and exhibition purposes. One end of the garden is being fixed up for booths.

By having the three-day session, the officers say "hope to hold the bunch together" and give delegates plenty of time to visit the exhibits. They have already supplied men to notify them before January 12 at about the amount of space will be required.

The secretary believes the program for the 1914 convention will be one of unusual interest. Care is

taken to cover a wide range of subjects. Announcers are such well-known men as W. A. Schirmer of St. Louis, formerly of Quincy, Ill.; Prof. M. H. of the Iowa State College, and Prof. N. E. Olson of the Kansas State Agricultural College. Others expected to speak, including the association officers, of course.

The officers of the association are: W. H. Chappell, Manhattan, president; W. H. Hammond, Great Bend, vice-president; B. T. Perkins, Pittsburgh, secretary and treasurer, and the following are directors: W. H. Hammond, Great Bend; A. Citli, Chanute; J. H. Chapman, Emporia; George L. Chapman, Cameron, Mo.; Carl A. Newton, M. J. Nichols, Concordia; J. H. Bennett, Lawrence; J. R. Femer, St. Joseph, Mo.; and F. H. of Kansas City.

President Chappell is confident that the 1914 convention will be one of the best in his association's history.

tory. He says every effort is being directed not only to uphold Kansas' standard of good conventions, but even to surpass all previous convention achievements.

Wichita.

Embraced with a period of much less than man's allotted span of life, the history of Wichita reads almost like a romance.

On Du Partz' map of Louisiana, published in 1757, at the junction of the Big and Little Arkansas Rivers is marked "A Gold Mine."

Downtown in Wichita.

In 1836, Jesse Chisholm, a half-blood Cherokee Indian for whom a trail and a creek have been named, guided a party from Arkansas in search of buried treasure.

In 1868 a "Chartered Company" was formed in Topeka "To establish a town at the junction of the Arkansas and Little Arkansas rivers."

In 1869 the peaceful and kindly Wichita Indians moved on from their camps at this place, where the Little River—Ne Shutsa Shinka empties into the Big Arkansas—Ne Shutsa—and the Wichita of the white man was born. In this year, also, the land now forming Sedgwick County and which was purchased from the Osage Indians, was thrown open to homestead. Farmers moved in, the site of Wichita town was laid out, and in 1870 county government was established. Wichita was chosen as county seat after a long contest with Park City, a rival town fourteen miles up the big river. The

first court session was held over a livery stable and Main Streets. The county was named in honor of John Sedgwick, a Union general killed at Spottsville.

The first school in Wichita was taught in 1861 by William Finn, who walked here from Emporia. The school was supported by tuition. There were few pupils. No one was turned away because he could not pay tuition.

The first important business in Wichita was the trading of buffalo robes. Then came the Texas cattle trade. Wichita as capital of the cowboy country as far as San Antonio. The cattle were brought in over the Chisholm Trail, as many as 700,000 arriving in one year. Abilene was the rival with Wichita for this trade. In 1872 the Wichita and Southwestern Railroad, which had been completed from Wichita to connect with the Santa Fe at Newton, this city took all the cattle business from Abilene.

In 1870 the village of Wichita was incorporated and named after the Indians and signifying "See the Wind Lodges."

The federal census of 1880 gave Wichita a population of 4,911; the census of 1890, 23,735; 1900, 24,671; 1910, 52,450; 1920, 72,217 and the official state-school census of 1922, 83,577. It is confidently expected that Wichita's population will have passed the 100,000 mark before 1930.

JACK RABBITS ISSUE CONVENTION CARD

The Kansas Jack Rabbits hereby extend to you, and all, a very personal invitation to be present at our annual convention, to be held jointly with the National Association of Ice Cream Manufacturers, January 23 and 24, 1924, inclusive, at Wichita, Kansas.

You, no doubt, have attended many conventions in your day but we assure you none will be remembered with greater pleasure than this one, as we have put up our sleeve that will bring to you something entirely new, in the way of entertainment.

Neither time nor expense has been spared to make this convention the most successful of them all, and more thing is needed to reach this goal, and that is your presence.

If you will make an especial effort to bring along one ice cream manufacturer eligible to become a member in the Kansas association there will be no question of our going over the top in attendance. Let us do it.

Last, but by no means least, the ladies, bring them along, we want 'em. A convention without ladies is a cake without spice. Plans for their entertainment are complete too. So SMILE—and hurry down to Wichita.

Yours for a BIG convention.

BARBER

Everything for the Dairy Industry

Improved U.S. Brine Freezer

Note These Important
Features—Some of Them
to be Found Exclusively
in the U. S. FREEZER.

Automatic batch weigher which assures the proper amount of mix for each batch and helps you to produce a uniform cream.

Patented removable bronze bearing and support for front end of dasher, which eliminates all wear on the cover and keeps the whipping device in correct alignment. It is easily removed and replaced—an exclusive U. S. feature.

Substantial brass hopper which simplifies the filling in of fruits and flavors.

4. Hinged cylinder cover which adds greatly to the ease and convenience of operation, and prevents injury to the cover through rough handling, and avoids the possibility of contamination.
5. Rotary brine control valve which gives complete control of the rapidity of the freezing process.
6. Rapid vertical discharge which makes quick emptying possible—an exclusive U. S. feature.

There are seven sizes of U. S. Brine Freezers, ranging in capacity from 40 to 160 quarts. Ask for complete specifications and prices.

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Western Canada Ice Cream Manufacturers to Meet Together With Other Dairy Organizations of Western Canada, at Moose Jaw, Sask., February 5, 6, 7, 8.

ARRANGEMENTS have been made for holding the 1924 Western Dairy Convention in Saskatchewan under the auspices of the Saskatchewan Dairy Association. The Western Canada convention includes the three prairie provinces, Manitoba, Saskatchewan and Alberta, together with British Columbia, and the convention alternates among these provinces from year to year.

This is the most important dairy gathering in Canada, according to dairy officials of Canada. They say it will be attended by dairymen and produce dealers from all parts of Canada, as well as a good representation from the United States. The first day's sessions will deal exclusively with the work of the Saskatchewan Dairymen's Association, and the remaining sessions will deal with general dairying matters.

Other important dairy associations will also hold their annual gatherings at the same time and place, namely, the Canadian National Dairy Council, the Western Canada Ice Cream Manufacturers Association and the Saskatchewan Holstein and Ayrshire Breeders' Clubs.

While dairy educational work is of course the main feature of the convention the entertainment of the delegates will not be overlooked. Committees have been appointed to look after this feature of the convention, and delegates will be assured of both a profitable and enjoyable time.

All communications regarding the convention should

be addressed to P. E. Reed, Secretary, Saskatchewan Dairy Association, Regina, Sask.

The British Columbia Dairymen's Association and convention officials that they will be at Moose Jaw with a strong delegation to invite the 1925 convention to be held at Vancouver. A meeting to make preliminary arrangements for the convention was held in the dairy branch offices, Regina, Friday evening, Sept. 7th, at which the manufacturers, a number of produce dealers and a number of the leading dairy producers of Moose Jaw and Regina districts were present. The following committees were appointed at this meeting and it was understood that each chairman might add to his committee as desired:

Finance—J. A. Caulder, chairman; F. M. Logan, P. James, R. W. Heim, O. W. Andreasen, M. J. Scott.

Publicity—P. E. Reed, chairman; N. T. Gardner, McLean, J. A. Smith.

Transportation and Hotels—E. S. Randolph, chairman; C. C. Holman, Fred Jones.

Entertainment and Reception—H. Pearce, chairman; Reception—R. Barbour, R. Brighty, Sterling Smith, J. Underwood. Entertainment—Geo. H. Nellis, M. Roberts, H. J. Walker.

Competitions—C. E. Thomas, chairman. Butter—J. Crowe, O. B. Hartley. Producers and Boys and Girls—B. H. Thomson, Fred Jones. Ice Cream—A. E. P. B. A. Cooke.

Program—F. M. Logan, chairman; P. C. Kidd, Simpson, K. G. MacKay, B. H. Thomson, A. W. Edga

Minnesota Manufacturers to Meet at St. Paul

Officials Expect Large Attendance at Annual Convention of Minnesota State Association of Ice Cream Manufacturers, January 10 and 11

MINNESOTA ice cream manufacturers will gather at St. Paul January 10 and 11 for their annual convention. Hotel St. Paul will be convention headquarters.

Secretary J. J. Farrell of St. Paul reports rapid preparations for the convention, which consist of two busy sessions. Addresses on the first afternoon will be given by men prominent in the industry, the secretary announces. A banquet will be served at 6:30 o'clock the first evening. The second session will be held the afternoon of the second day, beginning at 2 o'clock.

A supper and smoker has been arranged for Friday at 7 o'clock, with the ice cream supplymen's organization taking part.

The Minnesota association has been coming forward rapidly of late years, and officials feel sure that the convention this year will find a large attendance. They promise an interesting program. They have extended a general invitation to manufacturers of that state affiliated with the association to attend the St. Paul meeting and consider casting their lot with co-operative efforts.

W. W. Dunn, Jr., St. Paul, is president of the association. He believes the manufacturers of his state will turn out in large numbers. Other officers are: C. Ives, Minneapolis; Nels Baden, Wadena, is treasurer, and the directors are: Messrs. Dunn, Ives and F. Koors, Bemidji; W. L. Parker, Rochester; C. E. Kestel, Hutchinson; Nels Baden, Wadena, and Robert Rasmussen, Mankato.

St. Paul is well-known as the convention city of the Northwest. Hotel St. Paul is an admirable convention hotel, officials believe.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

Manufacturers of Southwest Meet This Month

California and Southwestern States Ice Cream Manufacturers Association
Ready for Annual Convention at Los Angeles, January 11th and 12th.

ACTION rides hard on the heels of ice cream manufacturers of California and surrounding states.

After making a remarkable showing in attendance at the national in October, and then sending several members to the convention in British Columbia of the Pacific Ice Cream Manufacturers' Association, Californians and their neighbors now are getting ready for the annual convention of the California and Southwestern States Ice Cream Manufacturers' Association.

The California convention will be held January 11 and 12, 1924, at Los Angeles.

Country Club, Los Angeles.

Association officers expect a record convention in spite of the long road trips their members already have made in the interest of progress. Dates for the meeting were selected at a session in the fall of the board of directors.

Committees and subjects to be discussed are being worked out, Secretary Harry F. Grosse advises *The Ice Cream Review*. Mr. Grosse was made secretary of the association last summer, when Robert Dryden gave up these duties to put the post in the hands of a man who could give it all his time. The association is well pleased with the good work that Mr. Grosse has done since taking office. He is located in Los Angeles, with offices in the Grosse Building.

President C. J. Alfred of Los Angeles is widely known as one of the industry's most progressive members.

The Convention City.

Los Angeles, the "City of Angels,"—or to give the sonorous Spanish title, "Nuestra Senora la Reina de Los Angeles,"—has been called the "wonder city" of the United States. Indeed, its fame has spread to all parts of the world; a city that increases its population within thirty-five years from 50,000 to 850,000, certainly is not in the ordinary class territory.

The capital invested in Los Angeles' ice cream industry, including confectionery plants, is estimated at \$11,450,532, with a weekly payroll of \$108,106, and an annual production valued at \$36,496,404.

There are various outstanding features that have contributed to this extraordinary growth—climate, soil, location, and raw products.

Any one of these advantages would be sufficient to ensure a large city, but taken together they guarantee the future of Los Angeles as the metropolis of the west.

Los Angeles was founded September 4, 1781, by a small band of colonists, who had been recruited from the Mexican states of Sinaloa and Sonora and were there under command of a government officer, to form an agricultural colony for the purpose of producing.

Los Angeles has made remarkable progress in improvements, now having over 100 miles of improved streets. The city has a complete sewer system and an outfall sewer to the ocean.

The banks of Los Angeles have noted throughout the country for their solid and prosperous condition. The city's deposits aggregating \$660,000,000 on January 1, 1923. The clearings in 1922 totaled \$5,153,839.82. The assessed valuation of property in the city in 1922, including personal property, was \$78,707. The value of building permits issued in Los Angeles in 1922 was \$121,206,782.

There are 40 public parks within the city limits, aggregating 1,000 acres. Six of these parks are of considerable size. Westlake, 32 acres in area, is one of the most popular open air resorts; Lincoln in the eastern part of the city, covers 45 acres and has been made attractive alike to recreation seeker and student. It also is a lake, and the park nurseries, and alligator ostrich farms adjoining are educational attractions. The oldest and best improved of the city parks, between Fifth and Sixth Streets, near the business center of Pershing Square.

In amusements, Los Angeles is well favored. There are many handsome and capacious theaters open year 'round. In addition to these are concert halls, open air amusement centers that are unique and attractive. Reports for 1922 indicate that Los Angeles has more per capita for entertainment taxes than any other district in the country. A magnificent Symphony Orchestra is maintained and there are schools of esthetic dancing, choral societies, industrial music, community choruses and various organizations of players and performers. Los Angeles attracts the best dramatic talent that visits the West. There are frequent lectures, fairs, fruit and flower shows, that may be enjoyed at any season of the year. Pasadena has an annual carnival on New Year's Day.

Sunken Garden, East Park, Los Angeles.

Quality Standard Adopted by Southern Association

Southerners Lauuch Program of Co-Operative Advertising of Ice Cream Manufactured Under Its Standard of Merit—To Meet at New Orleans Next November—Little Rock Convention Was One of Most Eventful in Association's History

National Convention Plans Discussed

ADoption of a quality standard to govern the purity of the ice cream manufactured by its members, and the decision to launch a co-operative advertising campaign to promote ice cream consumption in the South were outstanding features of the annual convention of the Southern Association of Ice Cream Manufacturers at Little Rock December 4, 5 and 6.

Members of the association interested in hearing plans discussed for co-operation toward the success of the national convention to be held at New Orleans in 1924 were not disappointed. Throughout the entire course of the convention there tingled an overwhelming sentiment in favor of aiding national association officials toward the success of their first convention in the South, and to extend to national convention delegates a welcome long to be remembered.

Officials finished their business at Little Rock feeling that, in many respects, their eleventh annual convention was one of the most eventful on record for the association.

Facing a program that fairly bent down under the weight of the many problems to be worked out, confronting the most extended lines of co-operative action heretofore undertaken, the association at the same time could not overlook its obligations to their national guests.

There was no surprise when the decision was reached to hold the twelfth annual convention at New Orleans just three days prior to the opening of the national convention next November. It was the association's understanding that the national convention will be held the week beginning November 17. With this understanding the Southern association set its dates at November 14 and 15.

This will make the opening of the Southern convention on Friday, with more business on Saturday, and the opportunity to look around the Crescent City and welcome national delegates on the Sabbath. Members of the Southern association will be encouraged to remain and attend the national sessions.

Selection of hotel headquarters for the Southern convention was deferred until after the national association makes its selection. It is thought likely that the Hotel Grunewald will be selected by President Vernon F. Hovey's organization. In that event the Southern officials will make their pick from others on the large list of up-to-date hotels in New Orleans.

Exposition Will Be Held.

Roberts Everett, secretary of the Association of Ice Cream Supply men, attended the convention. Following conferences with Southern association officials he announced that an exposition in keeping with New Orleans' facilities of this kind will be given by the national supply body, though no official action had been taken at that time.

Business faced the convention from the time the Convention President M. J. Costa called the first session to order till W. J. Barritt of Tampa, Fla., formally took the gavel from Mr. Costa's hands and pledged the association his most earnest efforts.

The quality standard of co-operative advertising matters were hang-overs from the 1922 convention of the Southern association. At that time M. J. Costa and his board of directors took under consideration an ambitious course of procedure aiming at increasing ice cream in public favor.

It was then brought to the attention of the association that officials recognized the direct way to build up ice cream consumption in the South is through affording the public a product of guaranteed quality and advertising that product along broad and thorough lines.

The association's plan to provide for a standard seal to appear on the containers of the products of the association's members, this seal to speak for the product of each manufacturer living up to the quality standard prescribed.

The quality emblem will be in the form of a shield bearing a dish of ice cream. Under the dish of ice cream will appear the words "Ice cream served here is of a quality product because made by a member of the Southern Association of Ice Cream Manufacturers."

Recommendation for the seal was made at the 1922 convention by Benjamin C. Brown of New Orleans, chairman of the co-operative advertising committee, functioning at that time.

"A Symbol of High-Grade Ice Cream."

When motion was made that it be adopted at that time, President Costa urged the association not to do so hastily in a matter of that kind.

"My idea," the president told the 1922 convention, "is to make this a symbol of a high-grade ice cream. We must make the seal familiar to the ice cream eating public. Give publicity to the fact that we have adopted

New Officers

PRESIDENT

W. J. Barritt, Tampa Dairy Co., Tampa, Fla.

VICE-PRESIDENT

S. N. Sutton, Sutton Ice Cream Co., Vicksburg, Miss.

SECRETARY-TREASURER

J. W. Clopton, Decatur Ice Cream & Creamery Co., Decatur, Ala.

DIRECTORS FOR 1924

Georgia, J. D. Kinnett, Macon; Mississippi, N. D. Brookshire, Meridian; Arkansas, Will Terry, Little Rock; Louisiana, Ben C. Brown, New Orleans; North Carolina, Hans Brody, Asheville; Tennessee, W. E. Drake, Nashville; Alabama, C. K. Crossfield Gadsden; Kentucky, Harry A. Cuscaden, Louisville; Florida, A. E. Stiling, Daytona; South Carolina, L. E. Girardeau, Greenville.

Date of Next Convention—Nov. 14-15, 1924.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

standard of quality and the seal of approval for that quality, and the members have pledged themselves to manufacture that quality."

The association then voted to keep the committee in force, that it might upon the slogans the secretary would get the members to suggest, make its report at the 1923 convention.

The action at Little Rock was the result of the committee's report, the personnel being: Benjamin C. Brown, New Orleans, chairman; M. J. Costa, Atlanta, Ga.; W. J. Barritt, Tampa, Fla.; J. W. Clopton, Decatur, Ala.; and John Kloecker, Lexington, Ky. Secretary Clopton was authorized to set a price in quantity lots on seals to submit these quotations to different members, asking them to advise the quantity desired.

The convention was marked by the convention sessions. The program was termed by delegates one of the best ever prepared for a Southern convention. The subjects calling for general discussions brought out enthusiastic responses at every session.

Reviews South's Ice Cream Development.

Prof. A. C. Baer of Oklahoma A. & M. College, Stillwater, Okla., widely known throughout the Southern industry for his help to manufacturers through The Ice Cream Review, held the interest for his audience when he spoke on the subject of "The Development of the Ice Cream Industry in the South."

He shot home a bright spark of optimism when he declared that the South is the logical ice cream producing area of the United States," then spoke of the progress that had been made both in quality and development of gallonage in the South. A moment later he quickened the pulses of his hearers when he declared that ice cream produced in the Southern cities, on average, is just as good in quality as that produced in the large cities of the North.

Harry Cuscaden of Louisville was awarded a rising vote of thanks at the conclusion of his snappy speech on the subject of co-operation.

Oklahoma Joins Association.

The state of Oklahoma was formally accepted into the membership of the Southern association. J. B. Porter, new president of the Oklahoma Association of Ice Cream Manufacturers, represented his body as delegate to the Southern convention. He advised of the acceptance of his state. Mr. Porter nominated J. W. Clopton of Enid as director of Oklahoma. Mr. Parker was promptly

W. J. BARRITT,
President.

S. N. SUTTON,
Vice-President.

J. W. CLOPTON,
Secretary-Treasurer.

The social features which distinguish the Southern convention from all others were well up to past standards. The entertainment program was all that could be desired. Approximately 150 ladies attended the convention. The Dixie Flyers took care of the lady visitors with theater parties and auto drives during convention sessions, and then provided entertainment for all in the evenings.

Entertainment Features.

The evening preceding the opening of the convention was taken up with an informal dinner-dance. This was repeated the following evening. The manufacturers' annual banquet was held the second evening of the convention, being featured by Little Rock's far-famed humorous lecturer, Earl W. Hodges. W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers and past president of the Southern association, addressed the manufacturers at the banquet. He said he expected his friends in Dixie "to do themselves proud" in connection with the national convention at New Orleans in 1924.

Benjamin C. Brown of New Orleans, who was named by the board of directors as a committee of one to make hotel arrangements for the 1924 convention, said that New Orleans will do all in its power toward the success of the Southern convention and the convention of the national association.

The grand finale to the convention was the trip to Hot Springs. A goodly number of delegates remained over after the closing session December 6 and accompanied the officers of the association to the Arkansas resort. They spent most of Friday enjoying themselves in the baths and roaming around the government's extensive playground.

A large party of convention delegates headed by M. J. Costa was entertained by ice cream manufacturers of Memphis during a stop-over in that city on Monday, December 3.

* * *

Arkansans Entertained.

In addition to the entertainment provided by the Dixie Flyers and the Arkansas ice cream manufacturers, civic and business organizations of Little Rock made the ice cream men welcome in their city by having them as their guests at different luncheons.

Among the organizations that entertained "Will" Terry's friends were Lions', Rotary, Co-operative, Kiwanis, and Ad Clubs.

(Convention proceedings will be found beginning on page 125)

OHIO UNIVERSITY WINTER COURSES IN DAIRYING

Winter courses in dairying are divided into two terms of four weeks each. Each term covers a distinct line of work. The first one, "Farm Dairying," begins January 7, 1924, and ending February 1, 1924, will be given to meet the demand of those who wish to receive training in the formation of a dairy herd, the care, feeding and breeding of the herd, the production of milk, testing of milk and cream, and preparing cows for the Advanced Registry. This course is also a preparation for the State Civil Service examination given for supervisors of the Advanced Registry.

The second course, "Dairy Manufactures," begins January 11, 1924 and ends March 7, 1924. This course has been established to meet the demand for a practical line of training in marketing milk and its products, the manufacture of butter, cheese and ice cream. The course is intended for those who are unable to avail themselves of the advantages offered by the longer courses given in this department and is given at a time of the year when buttermakers, cheesemakers, ice cream makers and milkmen can best leave their work. The course that has been formerly an eight weeks' course is now divided into the two four weeks courses mentioned above, so that those who are interested in the production of milk may take the first four weeks course and those who are interested in the manufacture of milk products may take the second four weeks course. Those interested in both ends of the business may take the eight weeks course, without duplication.

Dairy Trips

The students of both courses will be required to take a number of short excursions through the various milk lands in Columbus and vicinity.

Supervisors of Advanced Registry

Since this farm dairy course has been given, the majority of the students have taken it in order to qualify as Supervisors of Advanced Registry. This work involves the visiting of pure bred herds in different parts of the State; watching the cows milked and testing the milk for butter fat. However, for the student who is interested in dairying, the money expended is considered small when compared with the experience and training derived in visiting the best dairy herds in the world. The four weeks course will prepare the student for the State Civil Service examination which will be given the latter part of January.

Men for Cow Testing Associations

In the past it has been impossible to supply enough men for these positions from our own State. It has been necessary therefore to go to our neighboring states to get students to take charge of these cow testing associa-

The work is somewhat similar to the duties of the supervisors for the Advanced Registry. It differs in that the men are hired for the entire year, and the experience gained is for greater than that gained from a few weeks' work. These positions pay from \$600 to \$900 per year in addition to the tester's expenses, making the salary equivalent to about \$1,000 per year.

Certificate

Those students who have successfully carried both the Farm Dairying and Dairy Manufacturing Courses will be granted a certificate stating the subjects pursued. To receive this certificate, the candidate must continue in the course throughout the eight weeks and be present at the exercises of the course.

The New Era

Ice Cream Brick Cutter

The most PRACTICAL, DURABLE, EFFICIENT ICE CREAM BRICK CUTTER on the Market.

Past the Experimental Stage

WE CAN REFER YOU TO A GREAT MANY SATISFIED USERS.

The NEW ERA enables you to furnish your trade with a uniformly cut brick of ice cream. Can be adjusted to cut slices of any size.

Our representatives are the leading Ice Cream Supply Houses.

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

The Nizer

Remarkable Operating Efficiency of Nizer Electric Automatic Cabinets is the Basis of Their Success

WHILE it is true that any workable system of mechanical refrigeration does bring relief from certain labor problems, retailer's service troubles and injuries to the product—it is equally true that the cost of operating some mechanical units is prohibitive. The basic reason for the adoption of Nizer cabinets so quickly in over 135 cities, is that they cost little to run. They are a profitable investment.

Years of intensive development work by Arctic Ice Cream and Nizer engineers resulted in a highly specialized machine. It is not a compromise—not a re-designed unit. Every element of the Nizer was designed for the sole purpose of refrigerating ice cream—and it is correspondingly efficient in this service.

For instance:—the refrigerant used is sulphur dioxide; the compressor runs at slow speed (175 R. P. M.); the lubrication is permanently automatic; the temperature is regulated by a positive dual pressure controller; the compressor is direct driven through a worm gear reduction; the electric motor is a $\frac{1}{4}$ H. P., 110 volt, series type unit, that works equally on A. C. or D. C. The efficiency of such a com-

bination, when used to refrigerate 6, and 8-hole cabinets, is unprecedented. Records speak for themselves. Current consumption for the Nizer cabinet is as follows: 4-hole, 1.0 Kw. hour per day; 6-hole, 1.1 Kw. hour per day; 8-hole, 1.9 Kw. hour per day.

A notarized statement covering Nizer cabinets operating in Detroit where the current rate is 5 cents per Kw. shows the average cost per day for 4, 6 and 8-hole cabinets to be respectively 5 cents, 7 cents and 9 cents. These figures would naturally be smaller in the winter and slightly larger

The pioneer nature of the Nizer Electric Cabinet is recognized in the grant of United States Letters Patent No. 1,476,546 on Dec. 4th, 1923. Broadly, this patent relates to the essential parts of such a cabinet, irrespective of the system of refrigeration employed.

in the summer.

Whether the ice cream manufacturer or retailer is to pay for the current, the low operating cost of the Nizer is a vital factor.

Other direct results of such efficiency are minimum mechanical difficulties and long life.

We believe that a visit to the Nizer plant and a conference with Nizer engineers will prove highly profitable for every ice cream manufacturer who is contemplating the use of mechanical refrigeration.

Complete data on every phase of the problem is available to you here.

Low Cost

Nizer Advantages to the Retailer

- Elimination of sloppy floors.
- Longer life for fountain and fixtures.
- Saving an average of two quarts per five-gallon can, formerly lost by shrinkage.
- No more salty ice cream.
- Ability to serve the last half-pint as readily as the first.
- More satisfied customers, because of perfect texture and flavor.
- Absolutely automatic operation.

Nizer Advantages to the Manufacturer

- Less per gallon saved.
- No labor problems.
- Greater appeal to prospective retailers.
- Enthusiastic old retailers.
- Available any possible at any hour of day.
- Easy installation. Cabinet contains entire apparatus.
- Ability to transfer cabinet quickly from retailer to retailer.
- Elimination of returned ice cream and spoilage.
- Greater radius of distribution.

Cabinets

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

Replies to Inquiries

Dear Sir:—I beg to tender my heartiest thanks for your advice and information, which helped me to make an ice cream that has met with immediate success.

I made the mix from formula 3, page 20, of your book, and as I had no actual practical experience in making ice cream, I was not any too confident. However, the results exceeded my most optimistic expectations and I must give you the credit for making my task so easy.

Unfortunately, my Elyria tanks and viscolizer were delayed so long in shipment that I was not able to get them going until the close of the season, and, as ice cream is not eaten to any extent in England during the winter, I am trying to find some means of keeping my plant busy on other things.

If you can enlighten me on the following points I shall be very grateful:

Cream in England is not sold on a butterfat basis, and as there is no supervision you can readily see that some dealers will take advantage and market a very inferior article.

The retail price of cream in this locality varies three dollars a gallon up to five dollars, and I am sure if it is possible to make cream that will stand confectioners' use that there is a very good market.

I made a 30 per cent batch and gave it to a confectioner for trial, but, although it whipped up satisfactorily, it would not stand up long enough, and I suffered a loss to understand the reason unless I viscolized too high a pressure (1,500 pounds).

I am using milk powder and butter from the Zealand dairies and be given to understand that the highest quality obtainable.

In conclusion, I would be very much obliged if you will instruct the Olsen Publishing Company to forward me C. O. D. by American Express Co., any books you would be useful to me, also three copies of your Cream Mix.

Reply: You will probably find that as time goes on the consumption of ice cream will increase even during the winter months, as people become accustomed to having it as a food product rather than just as a dessert dish. I can understand very well just the difficulties you will have in bringing the food value of ice cream to the general consuming public.

You stated in your letter that you had made a 30 per cent batch of cream, but that it did not stand up long enough after being whipped. It is possible that 30 per cent butterfat is not quite rich enough for whipping cream which will stand up, and you might try a 35 per cent cream for that purpose and I believe you will not have this trouble.

* * *

Dear Sir:—I am enclosing our mix report. I am satisfied with this mix, as it is low on solids. I have made an error in my calculations on the enclosed sheet, as the cost per gallon of ice cream is very low.

I will be delighted if you will figure me out the cost of 500 gallons of about 34 to 36 solids and 8 per cent butterfat.

Reply: Below in table one you will find an analysis of your mix according to your mix report sheet. You will notice in this table that your mix tests 8 per cent butterfat, but your total solids is only about 29 per cent.

Table One.

Ingredients	Fat	Serum Sol.	Total
3060 lbs. milk.....	97.9	263.60	
312 lbs. butter.....	262.1	
152 lbs. skim milk.....	13.53	
364 lbs. skim cond.....	91.00	
585 lbs. sugar.....	
25 lbs. gelatine.....	
2 lbs. salt.....	
4500 lbs.	360.0	368.13	1
Per cent	8.0	8.18	
Per cent sugar, 13%.			

You are correct in your assumption that your solids are too low. You should have at least 11.5 per cent serum solids. In order to get a formula with 8 per cent

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order—"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

Baker Ice Machine Co.
Omaha, Neb.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

PICTURES of healthy, rosy cheeked children with parted lips and eyes aglow in expectation of a delicious dish of ice cream have been found by ice-cream manufacturers to have a strong appeal to all classes of people. The extensive employment of this type of illustrated advertising has been made doubly sound and effective by the results of recent scientific investigations conducted by the association's Industrial Fellowship at Mellon Institute, Pittsburgh, Pa., where it has been shown that the relatively small amount of gelatin necessary for stabilizing ice cream enhances the nutritive value of the frozen food product to a marked degree, making it easier of digestion and more complete of assimilation. Furthermore, gelatin is a protein of decided dietetic value and produces many valuable physiological effects.

Gelatin has become an essential part of the ice-cream mix not only from the standpoint of body, texture and palatability, but also of food value. The ice cream containing gelatin is a superior food for each individual consumer, but is especially desirable for those whose digestive

processes are either delicate or deranged. In view of these significant developments, certain large enterprising ice-cream manufacturers believe that a frank policy of pride in the use of gelatin is to be recommended and they are presenting these facts to the public.

To encourage a correct understanding of gelatin by ice-cream manufacturers and by the public, a complete report of the research, including the results of feeding tests with animals and co-operative work with hospitals, was displayed at booth No. 102 during the recent convention at Cleveland.

A booklet entitled "Edible Gelatin in Ice Cream" was distributed and additional copies can be secured upon request from the secretary of this association, 81 Fulton St., New York City.

Expressions of appreciation by many friends have been of such an enthusiastic nature, that the investigations at Mellon Institute will be continued on a more extended scale and further reports of the work will be given from time to time.

The Edible Gelatin Manufacturers of America

An association of the following American manufacturers of edible gelatin:

CRYSTAL GELATINE CO.	BOSTON, MASS.
ESSEX GELATINE CO.	BOSTON, MASS.
KIND & KNOX GELATIN CO.	CAMDEN, N. J.
MILLIGAN & HIGGINS GELATINE CO.	NEW YORK, N. Y.
SWIFT & CO.	CHICAGO, ILL.
UNITED CHEMICAL & ORGANIC PRODUCTS CO.	CHICAGO, ILL.
UNITED STATES GELATINE CO.	MILWAUKEE, WIS.
J. O. WHITTEN CO.	WINCHESTER, MASS.

OUR ADVERTISERS ARE YOUR FRIENDS—BUY FROM THEM.

butterfat and about 35 per cent total solids you must add to the cost of your ingredients. You can do this by cutting down a little on your milk, increasing the butterfat by the butter accordingly and use considerably more skim condensed milk to bring up the serum solids. Then you can also increase your solids by using 1 per cent more sugar.

You stated in your letter that you did not want the cost to run over 38c or 39c. This is absolutely impossible.

* * *

Dear Sir:—I would like to have the following mix analyzed: 10 gals. 40 per cent cream; 6 gals. condensed milk, whole; 25 gals. 4 per cent milk; 52 lbs. sugar; 3½ lbs. gelatine. About 2 gallons water that I soak the gelatine in. I would like to have a direct answer if you want to put it in The Ice Cream Review.

Reply: You will find the analysis of your mix given below in table one, where you will notice I have reduced your gallons to pounds:

Table One.

Ingredients	Fat	Serum Sol.	Total Sol.
10 gal. or 80.0 lbs. 40% cream...	32.00	4.28	36.28
6 gal. or 52.8 lbs. 8% cond....	4.22	9.50	13.72
25 gal. or 215.0 lbs. 4% milk....	8.60	18.54	27.14
52.0 lbs. sugar.....	49.40
3.5 lbs. gelatine.....	3.32
16.7 lbs. water.....
420.0 lbs. mix.....	44.82	32.32	139.86
Per cent	10.7	7.7	30.9
Per cent sugar.....	12.39

If I were to criticise your mix, I would state that the total solids are too low. Your mix containing only about 10 per cent butterfat should have more serum solids,

which you will notice are only 7.7 per cent. You get more serum solids by using a larger amount of milk powder or by using skim milk powder in place of the condensed. You will also notice that the per cent of sugar is only 12 per cent when most factories use 14 per cent. This larger amount of sugar will bring up the total solids.

You probably have a copy of the new booklet, "Ice Cream Mix," or if not, you can easily get a copy of it by writing to The Ice Cream Review. You will find on page 34, a formula similar to yours. In this formula the butterfat content is 25 per cent cream instead of 40 per cent cream. It should be difficult, however, for you to modify this formula to 40 per cent cream by using less cream and more milk.

* * *

Dear Sir:—I am sending you the formula that I am now using and would appreciate it very much if you could give me a formula which would make as good a better ice cream at a smaller cost. 10 quarts of 40 per cent cream; 8 pounds of sugar; 3 1/2 ounces of gelatine; 1 ounce of plump (ripeners); 2 ounces of gelatine for five gallons of ice cream. I mix and strain it and let it set for an hour or more. I figure this is costing me about \$.90 per gallon. I have been using it at \$2.50, but I am now going to wholesale. I find that my cost is too great.

Reply:—You will find the analysis of your mix given below in table one where you will note that the per cent of fat is about 12, but your total solids are about 27. This is of course, not a commercial formula as your mix contains nearly twice as much sugar as is ordinary.

Table One.

Ingredients	Fat	Serum Sol.
10 qts. 21.0 lbs 17% cream....	3.57	1.56
8.0 lbs. sugar.....
.7 lbs. filler.....
29.7 lbs. mix.....	3.57	1.56
Per cent	12.9	5.2
Sugar, 26.9%.

I suggest that you write to The Ice Cream Review and get a copy of the new booklet entitled, "Ice Cream Mix," which they have for sale at \$1.00. You then go over the various ice cream mixes suggested and pick out one which would suit you for a commercial product.

* * *

Dear Sir:—Will you kindly check over the formula master formula which we are using and see if you suggest any changes or improvements that can be made in it:

Sugar, 14.0 pounds; gelatine, .5; condensed milk, 10.0 (unsweetened-unusual-12 per cent butterfat); 25 per cent, 38.0; whole milk, 4 per cent, 20.; skim milk, 17.5—total 100.0.

Our finished product is excellent for quality. It seems that ice cream is much harder to keep than most others sold in this vicinity. Another feature we would like to overcome is the overrun. We have an average about 85 per cent and would like to increase this to 100 per cent if it would not injure the quality.

We pasteurize our mix to 135 degrees and heat it between 3,000 and 3,500 pounds pressure, permitting the mix to age from 48 to 96 hours before freezing. Our equipment is all new, consisting of a homogenizer, Wizard and Cherry vats, Fort A freezer (brine) and we do not understand why the overrun does not increase our overrun. Undoubtedly you can

You owe it to yourself to push the sale of Mapleine Ice Cream

You will find Mapleine one of your most paying flavors: it costs only 1½¢ to flavor a gallon of Mapleine Ice Cream.

And Mapleine is one of the best selling flavors. Manufacturers from East to West report Mapleine Ice Cream in a selling class with strawberry and chocolate. The public likes Mapleine Ice Cream.

This is the time to get Mapleine Ice Cream started with your trade.

Send us your Mapleine order now
—we guarantee satisfaction.

error in our ways and we shall greatly appreciate any suggestions or criticisms you may have to offer.

Reply:—I have analyzed your ice cream formula and you will find the calculations given below in table one:

Table One.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar.....	13.30
.5 lbs. gelatine.....47
10.0 lbs. 12% condensed....	1.20	2.70	3.90
38.0 lbs. 25% cream.....	9.50	2.52	12.02
20.0 lbs. 4% milk.....	0.80	1.71	2.51
17.5 lbs. skim milk.....	1.56	1.56
100.0 lbs. mix.....	11.50	8.49	33.76

There is nothing particularly wrong with your formula if I have analyzed it correctly, except that you could increase the serum solids and, of course, also the total solids 1 per cent or 2 per cent. This probably would result in getting a little better overrun and also would assist you in keeping your product in a more firm condition. There is also a possibility that especially with your present formula, you are not using quite enough gelatine. You understand that the amount of gelatine to use will vary with the quality of the gelatine, and I suggest that you try out your gelatine by using different amounts, say .5 pounds, .6 pounds, .7 pounds and .8 pounds in different experimental batches.

I would suggest to increase your solids you use 2 pounds of skimmilk powder in your mix balancing your mix by using 15.5 pounds skim milk instead of 17.5 pounds. It is quite unusual to have an unsweetened condensed milk containing 12 per cent butterfat and I do not quite understand this product. I should be

glad to have you tell me a little more about the sweetened condensed milk and also, if possible, give the composition including the butterfat in this product.

* * *

Dear Sir:—Once in a while during the last weeks we have been having come of our mix, after stood for three or four days have a kind of butter taste, and would thank you for any information that might remedy this. If it were in every mix we find the condition easier to remedy, but it is not the same ingredients are used under the same conditions. Herewith ingredients in our mix, and how manufactured:

133 pounds sugar; 9 ounces cheese color; 78 ounces vanilla extract; 8 ounces vegetable gum, Boerner 5 pounds gelatine (good grade); 1 1/5 pounds melon 19 1/2 pounds skim milk powder Merrel Soule; 19 pounds sweet cream testing 25 per cent; 44 pounds butter; 436 pounds whole milk test 3.8.

The milk, cream and butter are added together when the temperature is about 120 the sugar and fine are added. We pasteurize to 145, hold for half hour, then cool down to 120 and put through the vibrator at 2,500 pounds. The mix is then put back through the pasteurizer when all has been run through, the vegetable gum with some of the sugar added and cooled down to 40 degrees, the vanilla and melon is added. The mix is then put in 10 gallon cans and in a cooler and allowed to stand two days or longer.

Reply:—I have analyzed your ice cream mix and will note the calculations given below in table one. I will note that the per cent of butterfat is better, 14 per cent and your total solids 35. If you desire to maintain a 14 per cent butterfat standard, your mix is very well balanced, although I would like to see possibly a little higher percentage of serum solids.

Table One.

Ingredients	Fat	Serum Sol.	Total Sol.
133.0 lbs. sugar.....	126.00
5.5 lbs. vanilla and color..
.5 lbs. gum.....
5.0 lbs. gelatine.....
1.2 lbs. melon.....
19.5 lbs. skim powder.....	14.92	14.92
400.0 lbs. Cream 25%.....	100.00	26.70	126.70
44.0 lbs. sweet butter.....	36.96	36.96
436.0 lbs. 3.8% milk.....	16.57	37.4	53.97
1044.7 lbs.	153.53	79.02	366.55
Per cent.....	14.6	7.66	35.00

There are no ingredients in your mix which should give you the musty taste except that this taste may

Economy Cabinets

Dry Package Cabinets

Most efficient dispenser of Brick carton, dry bulk package, or Eskimo Pies. Each package goes to the customer in perfect condition having had superior refrigeration in a container totally surrounded by ice, in a cabinet heavily insulated with cork.

New Corkboard Cabinet

The manufacturers have come to realize that superior insulation means money saved on ice consumption. This tapered cabinet has an average of 3" corkboard on the side and 4" on the bottom, lined on both sides by water-proofing paper. Equipped with 7/8" buffer board to protect bottom of cabinet, making a cabinet that is far superior to ordinary styles.

Tub Cabinets

This separate compartment cabinet is especially designed for rural trade, as one compartment alone can be used without being compelled to ice the entire cabinet. The tubs of the cabinets are especially treated to prevent leakage.

ALL Cabinets finished in highly polished mahogany.

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

come from the sweet butter. It is possible that the sweet butter which you have available may have developed a rancid flavor. This could, of course, be remedied by using nothing but fresh, sweet butter. Ordinarily a mix should not develop any taste of this kind even when held four days.

There is nothing wrong with your method of processing except that there is a possibility of a taste developing in your mix held in the ten gallon cans, especially if the cans are not properly drained after washing and sterilizing. A little water left in the cans due to the condensed steam will, of course, produce undesirable odors which might result in a musty taste to your product. It would be much more desirable if you could hold your mix in a vat rather than in ten gallon cans, and possibly you can arrange for this equipment for

another season. The vats must, of course, be provided with facilities for keeping the mix at a low temperature until used.

* * *

Dear Sir:—Will you please give us the analysis of the following mix:

189 pounds sweet butter; 630 pounds plain condensed, 8 per cent butterfat; 80 pounds skim milk powder; 300 pounds cane sugar; 18 pounds gelatine flavor; 1010 pounds water.

Reply:—I am glad to refer you below to table showing the calculations made on your mix according to the figures given in your letter.

Table One.

Ingredients	Fat	Serum Sol.	Total
189.00 lbs. butter, 84%	158.76	158
630.00 lbs. cond., 8%	50.40	113.4	163
80.00 lbs. skim powder	76.0	76
300.00 lbs. can sugar	285
18.00 lbs. gelatine	17
1010.00 lbs. water
2227.00 lbs. mix	209.16	189.4	700
Per cent	9.34	8.5	31

You will notice that the per cent butterfat is 9.3 per cent. You will notice, however, that the solids and total solids are somewhat low.

According to my idea of an ice cream mix, ought to have 20 per cent total milk solids including the butterfat and serum solids. Your mix appears to contain only 17.8 per cent of these solids. If you increased your total milk solids to 20 per cent you would, of course, also have between 33 per cent and 35 per cent total solids.

* * *

Dear Sir:—Attached is our formula which we are using. Kindly advise us if figures are right according to per cent of fat, solids not fat, and total solids. If we can improve on this mix and how.

195 pounds milk, 3 1/2 per cent fat, 6.825 pounds fat; 210 pounds cream, 30 per cent fat, 63 pounds fat; 18.40 pounds condensed, 8 per cent fat, 18.40 pounds fat; 32 pounds sugar; 32 ounces gelatine; 5 ounces gum; 10 ounces melon; 10 ounces snow. 728.5 pounds solids; 88.225 pounds fat. Per cent of fat, 12.11; per cent of sugar, 12.3; per cent of gelatine, etc., 4.8. Solids not fat 16.77; cream 13.10; condensed, 46.00; total solids not fat, 75.87 (10 per cent.) Solids not fat total 75.87; butterfat total 88.22; sugar total 90.00; gelatine, etc., 257.41 total solids 35.3 per cent.

Reply:—You will find the analysis given below.

Character Cartons in small or large quantities *at a* reasonably low price

Character Cartons for Ice Cream

Character Cartons are made in any style or size, including individual slice cartons, and in any number of colors. A special Porcelain-Lustre, smooth as glass, finish adds to the good looks of these durable well-made cartons. We have a number of superbly executed stock designs that might fill your needs. A postal request will bring samples.

THE low price of Character Cartons is possible, only because we have a plant with modern equipment, designed to speed production without sacrificing high quality; and a trained organization that *knows* how to produce better cartons.

Every operation in the making of Character Cartons takes place under one roof—even the production of the high grade sulphite boxboard from which they are made.

These advantages mean a money-saving that should not be overlooked. Even the smallest creamery can share in it. An order for 5,000 Character Cartons receives the same careful attention that an order for 10,000,000 does. It is promptly executed and shipped. The buyer does not have to wait and does not pay a premium because his order is relatively small.

Don't hesitate to send us your present carton and to ask for estimate. We won't nag you with clever sales letters, or talkative salesmen, for we expect to prove our case by one letter containing the *price*, and by showing samples of the work we do.

11

table one and you will notice it agrees with your figures, except the solids in the sugar.

Table One.

Ingredients	Fat	Serum Sol.	Total Sol.
195.0 lbs. 3.5% milk.....	6.825	16.77	23.59
210.0 lbs 30% cream.....	63.000	13.10	76.10
230.0 lbs. 8% condensed.....	18.400	46.00	64.40
90.0 lbs. sugar.....			85.50
2.0 lbs. gelatine.....			1.90
1.4 lbs. gum, Meloine & snow			1.33
728.4 lbs. mix.....	88.225	75.87	252.82
Per cent	12.11	10.4	34.7

Sugar, 12.3%; stabilizer, 0.47%.

If I were to suggest an improvement in your mix, I would suggest a little larger amount of sugar. Most of our ice cream manufacturers are again using 14 per cent sugar. Some of them, however, are only using 13 per cent.

I noticed that you figured the condensed milk 20 per cent serum solids. This is a little bit above the average for 18 per cent condensed milk. I am usually figuring this 18 per cent instead of 20, although you may have a product which contains 20 per cent. You undoubtedly have the analysis from the manufacturers to base your figures on.

Purdue Dairy Short Course

THE Purdue Winter Courses in Dairy Manufacture and Dairy Production will commence on Jan. 21, 1924, and continue until March 14. These courses, eight weeks are planned to meet the needs and suit the convenience of the busy dairy plant and the dairy farmer, operator and helper.

The dairy manufacturers are calling for trained buttermakers, ice cream makers, milk plant operators and licensed testers. There has always been a shortage of trained men for the positions which have been opened in the dairy manufacturing field and the dairy manufacturing course is designed to give the training needed to fill these positions. This course is very useful to the man who wish to take up dairy manufacturing work. Men who have had creamery and ice cream or city milk plant experience will find the course useful in assisting them in filling more responsible positions. The work is made very practical and is outlined so that the student may get the greatest benefit from his work at the university in this short time. A large part of the theoretical work is eliminated and a great deal of emphasis is placed on the practical work in dairy manufacturing.

The following subjects are offered in the dairy manufacturing short course:

1. Creamery Buttermaking and Factory Management. Factors influencing the manufacture of high quality butter. Plant operation and the purchasing of raw materials, equipment and supplies.

2. Ice Cream. The classification, composition, standardization and manufacture of plain and fancy ice cream and ices.

3. Market Milk and Cheese. Factors influencing the sanitary production, handling and distribution of milk. The classification of cheeses and the manufacture of cheddar cheese and cottage cheese.

4. Creamery Mechanics. The construction, operation and repair of creamery machinery.

5. Testing Milk and Milk Products. The determination of the butterfat content of milk, cream, buttermilk, skim milk and whey by the Babcock test.

6. Dairy Bacteriology. The types and activities of both harmful and beneficial micro-organisms found in milk and milk products.

7. Farm Dairying. Building up the herd, selecting the sire, feeding, management, cow testing and calf raising.

The dairy farmers are calling for cow testers, official testers, herdsmen and farm operators or helpers. The dairy production course includes the study of subjects necessary to qualify the student for such positions. The lectures given in connection with this course will be supplemented by practical work at the modern equipped dairy barn. The following subjects are offered in the dairy production short course:

1. Farm Dairying. Building up the herd, selecting the sire, feeding, management, cow testing and calf raising.

2. Feeding Dairy Cattle. The calculation of balanced rations for growing and mature dairy animals.

3. Diseases of Dairy Cattle. The cause of and remedy for the common diseases of dairy cattle.

4. Forage Crops. Corn Silage, alfalfa and clover for dairy cattle.

5. Testing Milk and Its Products. The determination of the butterfat content of milk, cream, buttermilk, skim milk and whey by the Babcock test.

(Continued on page 56)

Just Out-A New Flavor "TOASTED NUT PASTE"

HERE is the latest ice cream flavor, Toasted Nut Paste. It's a new product in the ice cream field but an old and extremely popular flavor with all Americans.

Your customers will recognize in your Toasted Nut ice cream a wholesome nut flavor that has long been a household favorite. Be the first in your city to feature it.

Toasted Nut Paste is supplied in No. 10 cans at \$18.00 per dozen. Use two to three quarts for a 5-gal. mix.

Sign the coupon for an introductory shipment of one-half dozen No. 10 cans of Toasted Nut Paste.

6. Dairy Farm Organization. Systems of farm organization for the dairy farmer.

7. Marketing Dairy Products. Co-operative and other marketing methods adapted for the marketing of dairy products.

8. Dairy Bacteriology. The types and activities of both harmful and beneficial micro-organisms found in milk and milk products.

9. Farm Machinery. The construction, operation and repair of farm machinery.

These courses are offered at a time when there is a lull in the dairy plant and dairy farm operation in order that the student can more conveniently leave his work for eight weeks of intensive study.

The courses are finished early enough in the season to allow the student to secure employment during the busy period of the year when men with this kind of training are in the greatest demand.

All applicants for these winter dairy short courses must be at least eighteen years of age and should have

had a common school education. A high school course is not required.

The total cost of the course should not exceed \$130, and this includes room, board, books and other incidental expenses.

An appropriate certificate will be granted students completing the course.

Commenting upon these dairy short courses, Professor H. W. Gregory, Chief of Dairying at Purdue University says:

"We have never had sufficient men completing an eight weeks course in either dairy manufacturing or dairy production to supply the demand. Well trained men in buttermaking, ice cream making and market milk are always in demand. Last year the dairy department received twice as many inquiries for cow-testers, official testers and herdsmen as there were men qualified and available for the positions."

For additional information, address inquiries to Professor H. W. Gregory of the Dairy Department, Purdue University, Lafayette, Indiana.

Three Attractive Exhibits at Syracuse

All those who attended the National Dairy Show at Syracuse will remember the three distinct exhibits displayed by the Pfaudler Co. of Rochester, N. Y. Their regular booths, Nos. 138-139-140 and 141, in which was shown the new Pfaudler Vacuum and Cream Aerating Unit, a machine which removes onion, weedy and other foreign flavors from sour cream in the process of making butter. It is a form of butter improver and occasioned a great deal of comment at the show.

There was also shown in their booths a Glass Lined Truck Tank mounted on a Troy Wagon Trailer to be attached to a regular truck in the hauling of either milk or ice cream mix. Various fittings utilized in the Pfaudler equipment

were shown. A Pfaudler 500-gallon pasteurizer was exhibited.

Their second exhibit was composed of 14 glass lined tanks mounted on trucks of various manufacture. Two of the trucks displayed were recent orders of the Woodlawn Farms Dairy and were driven up from Scranton especially for the exhibition.

Probably the most impressive of the Pfaudler products was the Car Tank exhibit. This included the containers of car on which the Pfaudler Company holds exclusive rights, and also the regulation full-capacity tank car. A particular car shown at the show was purchased by the Milk Mix Co., Chicago. Cars of this type were also sold by Pfaudler Company to the Bowman Dairy, Chicago.

The Glass Lined Milk Tank Car Exhibited by the Pfaudler Co., Rochester, New York at the National Dairy Show.

The Cream of Society.

"Mrs. Divorsay belongs to the cream of society, doesn't she?"

"Well, she's been through the separator."

Kansas Association of Ice Cream Manufacturers

PROGRAM for ANNUAL CONVENTION

JANUARY 22, 1924.

- A. M. REGISTRATION OF MEMBERS.
EXECUTIVE SESSION.
VISITING SUPPLY MEN'S EXHIBIT.
- 12:00 M. Luncheon in Grill Room by entire attendance.
- 1:00 P. M. Address of Welcome, by Earl G. Elliott, City Manager of Wichita.
Responded to by W. H. Chappell, President of Kansas Association.
Address—"Credits," by M. E. Garrison.
Appointment of Committees.
- 8:00 P. M. Theatre. (By courtesy of Wichita manufacturers.)

JANUARY 23, 1924.

- A. M. Visiting Supply Men's Exhibit.
- 11:00 A. M. Address—By able speaker on some vital topic. (Yet to be supplied.)
- 12:00 M. Luncheon in Grill Room, entire attendance in a body.
- 1:30 P. M. Address—"Advertising," by W. A. Schwindeler.
- 2:30 P. M. Round Table Discussion. (Here is where you learn to overcome your troubles.)
- 6:00 P. M. Lunch; Entertainment; Dance. (By courtesy of Kansas Jack Rabbits.)

JANUARY 24, 1924.

- A. M. Address—"Factors Influencing Yield in Ice Cream," by Prof. N. E. Olsen, K. S. A. C.
Address—By H. M. Jones, Dairy Commissioner.
Closed Session for Manufacturers.
- 12:00 M. Luncheon by entire attendance.
- 1:30 P. M. M. Mortensen, Professor of Dairying, Iowa State College, Ames, Iowa, on "Some of the Factors Responsible for Durable Texture in Ice Cream."
Address—By able speaker. (Yet to be supplied.)
Election of Officers.
Report of Committee.
- 6:00 P. M. Annual Banquet, followed by an after dinner-entertainer and dance.

A very desirable entertainment is being prepared for the visiting ladies, consisting of seeing the city by auto, theatre parties, teas, and card parties, which will be announced in program later.

STRENGTH

Where there's weight
there's strength

Time tells! Much as the constant drip, drip, drip of water on stone will eventually wear away the surface—so will every day hard usage make inroads into the efficiency of your cold storage doors.

Ever stop to consider the number of people that pass through your doors each day—going in and out? Ever stop to consider the countless slams, bangs, bumps and crashes each door has to withstand in every day's work—365 days a year—year in and year out?

The doors of your plant are **important**—**vital**ly important! They must stay "in commission" and serve their purpose without flinching—without taking any trips to the "shop" for repair. For their absence from the line of duty handicaps the efficiency of the plant!

We realize the **importance** that the cold storage door takes in cold storage **plant efficiency**—have realized it for seventeen years, since our very beginning.

By test, Jamison Doors weigh considerably more than other doors. By test the hardware on Jamison Doors weighs **three times as much** as the hardware on other doors. The weight **PLUS** the construction gives the needed strength. Jamison Products, are **truly** heavy duty products. And that's what you want!

If you care to make a comparative test of these weights, we shall be glad to have you do so—at our expense. Write for our catalogue. Address Desk 6.

Oklahoma Association of Ice Cream Manufacturers

Proceedings of Seventh Annual Convention, Held in Tulsa

Hotel, Tulsa, November 21-23, 1923

NEW OFFICERS.

President, J. B. Porter, Tulsa.

Vice President, C. A. Burns, Ponca City.

Secretary, W. M. Hawk, Tulsa.

Oklahoma ice cream manufacturers turned out in large numbers to attend the seventh convention of their association in Tulsa the 21, 22 and 23 of November. They came to Tulsa for business," for business was the chief topic of discussion in the hotel lobby before and after the meetings, and many problems confronting the average ice cream manufacturer were threshed out in meetings after the formal addresses were delivered.

The forenoon of the first day was for registration of members of the association and the meeting of the executive committee.

The first general session was called to order at 2:30 Wednesday afternoon, President Parker of Enid in the chair.

* * *

Address of Welcome

By WILLIAM HOLDEN*

Mr. Holden: Mr. President, and Ice Cream Manufacturers of Oklahoma: While I regret that Mayor Newblock of our city was unable to be present to greet you today, I am very glad to substitute for the mayor, and to welcome the ice cream manufacturers of Oklahoma to the city of Tulsa. We are glad to have you with us to discuss the many problems that present themselves in your own business. Through the discussion of your own problems you do not only solve them for yourselves, but you impart information that is of benefit to us as citizens of Tulsa, for you help us to solve our own problems in other lines of work.

I am especially proud to welcome you to Tulsa today, for only yesterday our citizens voted a very large appropriation for civic improvements. They have voted to spend more than \$900,000.00 for sewer and park improvements, which will mean the transformation of 2,000 acres of land near the Mohawk Reservoir into a park, in connection with our water system. And the vote in favor of this expenditure was approximately three to one! Which reminds me of the story of the negroes we met on the street and were talking about an election. One of them in particular was highly elated because Harding had won.

"Yes," he said, "Harding was my candidate, and he won, but, of course, the white folks had their candidate too."

Tulsa is devoting a great deal of attention to dairying, which is the foundation of your own business. We now have a man employed by the city to give special attention to the development of dairying, visiting the farmers in the vicinity of Tulsa, helping them to develop their herds to the highest degree for the production of milk, and to teach them how to care for the milk after they have it. This is a work that is of great value to you as ice cream manufacturers, and users of

dairy products, for it helps you to improve the quality of your own product, and provide a better supply of your raw material.

We are very grateful to the ice cream manufacturers of Tulsa, for the assistance they have given us in this work. Their business is more or less seasonal during the warm weather when the production of milk is greatest, the consumption of their ice cream is least, and they have in this way rendered us invaluable assistance in the disposition of surplus milk during the heavy production season. You gentlemen constitute an important part of the dairy industry, and we appreciate the assistance you have given us in the dairy industry in this vicinity.

We are interested in the development of the dairy industry, and we realize that the development of our dairy industry means a great deal to us in placing our land and future investments in this territory on a solid foundation.

You are rendering a great service to the people of our community by encouraging the consumption of dairy products. Since prohibition more and more ice cream parlors are taking the places formerly occupied by saloons. You are helping us to keep our people healthy, and to obey the law and become better citizens.

So I want to extend to you again for the part you have taken in Tulsa, a welcome to our city. We hope you will enjoy your visit here, and that you will meet with

* * *

Response.

J. B. Porter, secretary of the association responded to Mr. Holden's welcome, stating he was sure the ice cream manufacturers appreciated Tulsa's hospitality and that he personally appreciated the work they were doing to develop the dairy industry in the immediate vicinity.

* General Secretary, Tulsa Chamber of Commerce.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

President's Address

By J. W. PARKER*

IT IS indeed a pleasure for me to see so many ice cream manufacturers of our state at our first session today. It brings to my mind the reasons for which this association was formed: to promote the common business interests of the ice cream manufacturers of Oklahoma; to establish and maintain most friendly relations between members; and to act as an organization on all matters affecting the industry as a whole. The extent to which this work has been carried on is reflected in the growth of the association, and the coming into its ranks the leading ice cream manufacturers of Oklahoma, with loyal support and assistance when the good of the industry demanded it.

There are some real benefits to be gained by frequently meeting with your own competitors. Your feeling toward him stimulates your observation of his methods as compared to your own. The fact that you are his competitor quickens his wits, and he watches closely your own movements. Both of you may be using similar methods, but differently applied, and what your competitor learns of your own application of his methods, which are also your own, is amply repaid you by what you learn of his own application of the same method. You may not duplicate his method in your own business, but you take the thought he has left with you, and apply it in your own individual way.

It is only natural that the exchange of ideas with other men engaged in the manufacture of ice cream, stimulated a desire to put these new ideas into effect in their own organizations. This desire is rapidly spread from one to another until it affects the minds of every one present, adding force to the thought. If for no other reason, ice cream manufacturers of Oklahoma should meet at least once a year to discuss new methods, economic conditions, and the best possible means of promoting the industry.

A few years ago business methods were safely guarded that they may not reach others engaged in similar lines of business who might make good use of them themselves. Today we exchange the best of our ideas. We give to our neighbor and he gives to us, and join hand in hand in our efforts to put the entire industry on a firmer foundation, and to the benefit of all concerned.

Through this co-operation of ice cream manufacturers with each other the industry has been brought up to the position it holds today. A great deal of credit is

Bacteria in Relation to Milk and Ice Cream

By PROFESSOR C. H. McELROY*

THE ice cream industry has in the past few years experienced a wonderful growth, occupying in most places a most prominent part in the food industries of the cities. But with the expansion of the industry, the problems confronting it also grew, and one of the most puzzling problems to most manufacturers is the growth of bacteria.

Bacteria in ice cream might not be such a problem if their development were better understood, and greater caution taken to guard against it. The growth of bacteria under certain conditions is very rapid, and so small are they that from thirteen million to five hundred ten million may be counted in one cubic centi-

* With the A. & M. College, Stillwater, Okla.

also due to the supply men and their associations we have been able to make the progress in this industry that we have made. We have taken ice cream from the luxury class, and put it in the class with health foods.

Food Value Being Taught.

Our people are being taught the value of ice cream as a food. They are now eating ice cream 365 days a year instead of confining it to a Fourth of July picnic dish. The result is a steady and healthy growth of the ice cream industry, and the credit for bringing it about is due the discovery of science that ice cream is a well balanced food in itself, that it is a healthy food for young and old, and to the work done by ice cream manufacturers and supplymen in a broad broadcast this information for the good of the public.

So, gentlemen, I urge you to speak up at this convention. Speak what is in your mind. Give to the other the benefits of your experience. Concealing your own methods only reveals the fear in you that you are not quite as progressive as your neighbor. Leadership to your organization and to your industry should be yours. You on to attend your state and district meetings is a prominent part in the discussions, and to give all the information you can. You cannot say you cannot afford to spend the time or that the expense is too great for you to attend your state convention. You should let a few men carry on all the work of the organization. It has been my experience that a man usually gets out of an organization just about what he puts into it. If you put nothing in, you cannot expect to get anything out of it.

Business and professional men in all lines hold annual meetings, not to fix prices, but to acquaint themselves with the latest developments in their industry and advance it to the highest degree. Through the education of this kind the public is best protected from unscrupulous methods in the manufacture of products and advertising that is misleading to the consumer.

A year has passed since this organization adopted the code of ethics taken from the fair practices of The Association of Ice Cream Supply Men. Let us meet together here, every one of us, and resolve to continue to follow the ethical standards laid down by this organization. The state of Oklahoma needs peace and good will, and ask every one of you to continue to fulfill your duty and be loyal members to the organization.

laboratories in one cubic centimeter. It is a fact that as many as eight trillion bacteria have been found by

There are various ways to determine the number of bacteria in milk or ice cream mix, but the method is most generally used and has been found to be most accurate.

Bacteria in milk may come from one of several sources, divided into two classes: the raw material contamination. The bacteria we find in ice cream have originated with the cow, or they may come from the utensils in which the milk, the cream or the ice is handled, or they may come from the persons handling the product. Cream will usually contain more bacteria

The Grand Rapids
ICE CREAM CABINET OF QUALITY

Style 7

IN the three words above you will find the outstanding reasons why Style 7 Grand Rapids Ice Cream Cabinets should be put at work for you next season.

Style 7 is the most efficient of cabinets because it is beyond any question of doubt the most highly developed cabinet ever devised. Its design includes the scientific taper style of insulation originated and perfected by us. In construction it is unrivalled—extra heavily insulated, absolutely protected against absorption of moisture, sturdily built of finest materials, sound as a dollar throughout.

Style 7 Cabinet is extremely economical for four reasons: First, because its efficiency makes possible substantial reductions in the cost of ice and in attention required. Second, it affords maximum protection for your product. Third, our position as the world's largest makers enables us to produce and sell this superior article at an extremely attrac-

tive price. Fourth, the Style 7 Cabinet is so long lived that when the price is divided by years of service the result represents minimum investment cost.

The Style 7 Cabinet has stood the greatest of all tests—**TIME**. It has demonstrated to the satisfaction of thousands of users that it offers the utmost in freedom from annoying and costly trouble.

Investigate fully! Then you will learn why Grand Rapids Cabinets are essential if you are to enjoy greatest profits. Send for our complete catalog which illustrates our full line of models of all types, including the Style 7, the famous Zero Brick Cabinet and our extremely practical combination brick and bulk cabinets.

than milk, for the greater amount of solids and fat in the cream provide more ideal conditions for their growth.

Bacteria in ice cream may come from the gelatine—another problem for the ice cream manufacturer. If he pasteurizes the mix at a temperature which will destroy the bacterial life, he also destroys the solidifying power of the gelatine, so he must hold his pasteurizing temperature low enough to destroy the maximum amount of bacteria life, and retain the solidifying power of his gelatine. Sugar likewise contributes to the number of bacteria found in ice cream.

Extracts have little influence on the number of bacteria an ice cream mix may contain, for it is found the alcohol most flavoring materials contain retard their growth.

Another source is the air. We do not find bacteria in the air itself, but the dust in the air carries millions of them. A cubic meter of air may contain as many as fifty to sixty thousand bacteria, many of which may find their way into the ice cream mix.

I have found that some ice cream manufacturers will allow water to remain in the freezer, or the homogenizer over night, and that this practice usually results in a product with a very high bacterial count. Cleaning, sterilization and drying must be thorough, for every little crevice in any piece of equipment may house millions of bacteria and contaminate a mix which would otherwise be nearly perfect.

Workmen around the plant may contribute considerably to the number of bacteria in ice cream. Employees should be examined by the local health department to

determine whether or not they are germ carriers. It is possible for people working in food products to contaminate the product with typhoid, tubercle or diphtheria germs, which belong to the pathogenic class, three to six months after they have recovered from the disease.

Growth of bacteria in the ice cream being hardened in rooms is very slow, for temperatures are low. Pathogenic bacteria, however, such as *Staphylococcus aureus*, mentioned may remain inactive for sixty days, at room temperature, and still be a source of bacterial contamination.

As I have said before, there are a great many different kinds of bacteria in milk, and which produce different results. There are gas formers, which produce the bloated cream cans we often see on the way platforms. Others known as rapid-digesters destroy all the casein, leaving only the whey in the bottom of the tube. Others produce reddish colored or bitter milk, bitter milk, slimy milk.

The bacteria I have just mentioned are under control. Other kinds, such as *Streptococcus lactis*, are dangerous, and the process of pasteurization must be controlled so as many of the undesirable bacteria as possible are destroyed and enough of the *Streptococcus* retained to produce the required amount of acid in the milk.

Under the conditions I have mentioned, it is difficult to fix a bacterial standard for ice cream, but the manufacturer should bear in mind that pasteurization of the mix is the most effective means known to destroy bacteria, and to prevent their further growth, and the equipment with which the mix is handled must be thoroughly cleaned and sterilized.

The Source of Supply

By J. ROBERT WILEY*

I AM rather reluctant to speak to you today about the source of your milk supply, for many of you gentlemen are what we may call second-hand-men—you do not purchase your supplies direct from the producer, but from someone else, who has purchased from the producer, or from a third party dealing with the producer.

My work is in dealing with the primary producer of your raw material used in manufacturing ice cream. I am a producer myself, having a farm in the vicinity of Mr. Parker's home town of Enid, and Mr. Parker and myself have exchanged our products many times. I must say in deference to Mr. Parker's product, that if he is as well satisfied with my product as I am with his, we will always get along very nicely.

* Special representative of Tulsa Chamber of Commerce.

The Tulsa Chamber of Commerce is now putting on a five year campaign of dairy development which the ice cream men should be very much interested, even though they are not directly dependent on the producer in this vicinity for their supplies. I am in an office on the top floor of a sky scraper machine, that he is a long way from the foundation, that he is not dependent upon it at all, but if that foundation should give way, he may wish that he had been connected to that foundation than he was. He would realize the foundation was really a greater support to him than he thought it was.

The consumer of dairy products should have something to say about the production of milk, and you ice cream men, as manufacturers of dairy products should have, and should exercise a powerful influence on

Oklahoma Manufacturers and Wolf Hounds

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

duction of milk, and its quality, for milk is the foundation of your business.

This dairy development work that we are doing with the farmer is a special work conducted by the Tulsa Chamber of Commerce. We do not mean to conflict in any way with the county agricultural agents and with their work, but we wish to add one more help to the farmer in order that the production of milk may be increased in this community, and its quality improved.

Our first step is to visit the farmer and explain to him the work we are doing, why we are doing it, and how it will be of benefit to him. We obtain from the county inspector's office in Tulsa the data we need about each individual farmer, how many cows she has, how many milkings and how much milk he is producing. I have here a list of 39 producers whose cows are producing the most milk a day, and the average production of milk is just a trifle over one gallon. This is not enough, but many farmers do not realize it, and they do not know how to increase the production of their milk without purchasing a higher grade of stock.

I have had considerable experience in the live stock business including dairy cattle, and I have found, and I have also been the experience of others that the best way to secure a good herd of milk producers, and the cheapest way in the long run is to raise them yourself. We are encouraging those farmers to purchase only two good cows, either grades or pure bred, and a good pure bred bull, and to raise his own herd of producing cows. I made a trip to Wisconsin a long time ago for the purpose of purchasing good milk producing stock, and I found that the dairyman of Wisconsin has just two suits of clothes. He has one that he wears to church on Sunday, and another that he wears when he sells cows, and he wears the last men-

tioned one the most. Buying good cows, is without doubt, the quickest way to obtain a good herd of milk producers, but there is the speculative element that we have to deal with in purchasing these cattle, and too many buyers are getting the worst of the deal. If a farmer will buy a good cow or two, and a good sire, breed his own, and take good care of what he raises, he is going to raise a better herd for less money, and he will appreciate them when he has them.

After the first year he will have a few heifers from his purebred bull and grade cows. These will be of a fairly good milk strain, and by breeding these heifers back to a good bull, another generation of still better heifers is secured. As this process is continued, a better herd is secured each year, till he has stock that is backed by generation after generation of nearly purebred stock, and having raised it himself, the farmer will give it better care and feed, produce more milk, and make more money on his investment in time and cash.

Feeding is another problem of the dairy farmer in this state. The average farmer knows very little about the feeds that are best for the production of milk. Most of them use the feeds they happen to have on hand, giving little thought to furnishing a balanced ration, and it is a part of our work in dairy development to correct this. Eventually we hope to put the production of milk in this territory on the same high plane that it is in the great dairying states of Wisconsin, and New York.

While we are helping the farmer, we are also helping you, and I want to assure you gentlemen who are using dairy products as the basis for your business, that we appreciate the assistance you have given us in carrying out this work, and we will be grateful for your co-operation in the future. I thank you.

President Parker: We will now have the report of our Secretary, Mr. Porter.

SECRETARY'S REPORT

By J. B. PORTER

THE splendid addresses just given bespeak the progress of the ice cream industry of this state. This year our program is quite different than it used to be several years ago, and it illustrates the progress that has been made in the industry. We are now continuing our old work of improving manufacturing methods, and enlarging upon it by making improvements in our sources of supply, and in our methods of production and sale. A few years ago our discussion centered chiefly on the manufacture of ice cream, how much fat it should contain, whether or not we should use gelatin, how to incorporate the gelatin in the mix-

and other topics, which are now considered quite definitely settled. In the two talks just given, we have gone to the two extremes in our business, to the source of supply and the marketing of an absolutely safe product. While we do not mean to insinuate that we have mastered all the other questions, I think the addresses on these subjects do show some advancement year by year.

It would seem in reviewing the past year's work that the secretary's office had not been so active as in some years past, and in the way of keeping in touch with individual members this is probably true, but the

At Seventh Annual Convention at Tulsa.

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

amount of general work and correspondence has been much greater.

Our first concern was to keep in touch with the state legislature in which several bills affecting our business were offered. One levied a tax of five per cent upon the net income of every corporation, association, or partnership doing business in Oklahoma. This was disposed of after a fight in which other interests were also concerned. Then a marketing bill was introduced which required \$25.00 license fee, and as much more for a bond of \$5,000.00. This bill was an unfair, vicious thing, but required all the effort and help we could secure to stop it.

Just for your information, I want to say here the passage of this bill would have cost every manufacturer each year four times as much as our association dues. Matters such as this are good reasons why every manufacturer of ice cream in the state owes it to himself and his business to be a member of the state association.

Our legislative Committee, Messrs. Crumpacker, Glitch and Parker, and Attorney W. P. Hill deserve credit for the success in handling these matters. Another matter which required considerable time and work, as well as expense, was the effort to have the appropriation for the dairy department at the agricultural and mechanical college made available, and in this I want to compliment the members for the general response in replies. Owing to the arbitrary and chaotic political situation, our efforts were not given the consideration they deserved, but at that, were more successful than many other deserving projects.

Another matter which required considerable correspondence was the question of employing a field secretary. The question was presented in several ways,

including manner of financing, and resulted in a 50-50 proposition. With any hops of being successful it would require practically unanimous support, and the idea was abandoned.

District Meetings Held.

Several district meetings were held and abuses discussed. Prices quoted over the territory were quite uniform, but the growth of some abuses such as credits, rebates, telephone calls, long deliveries, and assuming various excessive overheads appear to be increasing. While co-operation was acknowledged as the remedy, but few if any, carried through the season on the co-operative basis.

The costs of supplies averaged higher than 1924, the season as a whole proved disappointing. The opening of the season looked very promising, and the weather was very liberal, but unusually wet weather together with high water that disarranged shipping schedules, spoiled three weeks of good season. Several weeks of extremely hot weather brought volume, which was stopped short by politics, and have not since recovered their usual volume.

Several new and up-to-date plants were in operation during the year, and one plant was destroyed by fire. The progress being made in general in the industry would appear rather conservative. This seeming to have been an "off year" for Oklahoma. Still the volume of business done should show greater strides in advancement.

This idea is best expressed in the report of the ethics committee: It is a recognized fact that unethical conduct in business results not only in the loss of the perpetrator of the act, the person or firm to whom the unfair action was taken, but finally, the industry engaged in the particular line of endeavor in which these unfair practices take place. More and more the idea is sinking into the minds of business men that business must be conducted along lines that are ethical, and that, while competition will always exist, it is such a thing as the adoption of the Golden Rule by competitors, and that its adoption makes for a successful and healthier growth of the entire industry.

Worked For Better Ice Cream.

For ten years our association has striven for better ice cream, a clean, wholesome, standard product. Improvement has been remarkable, and you can get good ice cream anywhere in the state today. The equipment, skill, and methods have been developed up to date, and now we reach the larger field, that of selling, not just selling your dealers, but selling the public, increasing the amount consumed. Establish a reputation which is fair, and then forget about price and merit. If you think price, talk price, and don't agitate price, of course, your customers will be the same, while if you forget price, and tell them many good points you offer, they will be interested in helping you sell more ice cream. Consider your position legitimate, one of the businesses of the world today, but at the same time one of large responsibility, for you are dealing with a very potent factor of health, especially as affecting women and children.

Don't allow abuses to dominate your policy, don't be a treacherous leak that sap your profits as surely as a till-tapping thief, and less on the respect of your customer, but your banker as well. Run your business on business principals, and wind up the

EQUIPMENT FOR HANDLING

MILK FROM COW TO CONSUMER

These BESTOV Trucks Make Better Management Possible

Hendler Can Truck—for empty cans

TRUCKS, built for special purposes, as these are, will pay for themselves easily in one season, because of the better management they make possible. You can reduce labor at many points; speed up many operations; and eliminate a lot of confusion and guess work, by sprinkling a few of these trucks about the plant.

The Hendler Can Truck is an old friend; the other three trucks have just been developed to fill definite needs in the ice cream plant. There is no better truck made than the Hendler Can Truck and none more attractively priced. One user who has ten of them says "they are as good as new after 3 seasons." The other trucks are built in a similarly superior fashion.

A new catalog giving full details and prices of these trucks will be mailed to you promptly at your request.

with money to pay your dues at a good convention and have a vacation besides.

President Parker: Before we adjourn, I want to ask all of you to be present at the dinner and entertainment to be given this evening in the dining room below, and to meet with us again tomorrow morning promptly at ten o'clock.

Meeting adjourned.

Thursday, November 23.

President Parker: Secretary Porter has a few grams to read to you this morning. (The secretary read telegrams of greeting from the National Association of Ice Cream Manufacturers, and National Association of Practical Refrigerating Engineers.)

President Parker: We now have a treat for gentlemen, an address by Professor Baer.

* * * *

The Ice Cream Industry of Oklahoma

By PROFESSOR A. C. BAER*

IT IS always a pleasure for me to meet once a year with the ice cream manufacturers of Oklahoma. I am glad to be with you today. When Mr. Porter called me up to remind me of this, I was at a loss to determine what to say that would be of interest to the ice cream men of this state. For the last two years I have not been as close to the ice cream manufacturing industry as I should have been. Our dairy husbandry department at the college has been enlarged, and this has taken up a great deal of the time which otherwise would have been devoted to the manufacture of dairy products.

The past year the ice cream industry has made its usual progress. I have seen figures showing that the ice cream production now is greater than it ever was before. In the southern half of the United States the production has increased about twenty per cent. This is as it should be, for the consumption of ice cream has not been as great in the south as it should be, in proportion to the consumption in the north. In the north, the consumption of ice cream has been above that of the country as a whole. Cincinnati, for instance, was said a few years ago to have the greatest per capita consumption of ice cream. We hear of other cities claiming the greatest per capita consumption, especially in the north, and the time has come when the south with its warmer climate should have the largest per capita consumption of this product.

The increase over the entire United States is reported at about ten per cent. No doubt the dry law has had a great deal to do with the increase in demand. Carbohydrates formerly taken from the glass are now taken from a dish or an ice cream cone. People who formerly depended upon the brewers and distilleries to furnish refreshment, are now looking to the ice cream manufacturer for it. The candy man has also received his share of the business which formerly went to the brewer, as evidenced by the increase in the consumption of candies.

Throughout the entire world we find the ice cream manufacturing business is increasing. In England, for example, the demand for ice cream has increased about 75 per cent in the past two years. Large, modern plants are being constructed in England, some of them with a capacity of over 1,000 gallons of ice cream a day. Ice cream was little known in the countries of Europe before the war, but the production of it was stimulated by the American soldiers who demanded real ice cream instead of the "cream ice" formerly made in Europe, until now the European manufacturers are abandoning their old name of cream ice and adopting the American name, ice cream.

Australia, known throughout the world as a great butter producing country, is becoming a large producer of ice cream. It is also spreading to South Africa. Just a short time ago I had a letter from a former

student who is working for a company operating in South Africa, and he said his company plans to build a modern plant there, and he wanted me to tell some good boys down there to help him. A couple of them decided to go, and were going to send a cablegram stating they would come, but found it would cost \$2.83 a word to send a cablegram, so they concluded it would be best to write instead. A young Japanese who attended the University of Wisconsin is now operating the largest ice cream plant in Japan.

Ice Cream Development Is World Wide.

So we find the ice cream business growing rapidly over the entire world. The foreign countries are depending upon America to furnish the ideas, as well as the equipment and much of the supplies for their ice cream industry, and we will have a tremendous influence on the manufacture of ice cream and other dairy products in the old world.

Some foreign countries are 2,000 years behind us in the handling of dairy products, while others like Australia and New Zealand, are advanced almost if not farther than this country in the making of ice cream. We do not think of Australia and New Zealand as dairy countries, but it is a fact that butter is produced there on a more intensive scale than it is in America. New Zealand is especially noted for its dairy industry. New Zealand farmers use more milking machines in proportion to the number of cows than we do in this country.

However, I would build my talk to you this morning around the quality of ice cream. Quality is a word which may mean little, or it may mean much. To you it may mean much, for a uniform high quality of ice cream is what you all should produce. The ice cream of Oklahoma is not what it should be. We are criticizing the men of the north for making a poor quality product. They tell us that our cream in the south is not good to eat. This, of course, is not true, but we should be making a product that is beyond reproach, and one that will stand the test of time.

One reason for our not making the quality of ice cream we should have is that throughout the south, especially in this state the ice cream manufacturers have not realized that competition and quality are the two big factors in the business. When competition is so keen it is necessary to use lower quality raw materials, and uniform quality cannot be maintained.

The ice cream of Oklahoma ought to be of uniform good quality. We could gather samples of ice cream made in 100 different cities, and find them all samples alike. We would have a great variety of flavors, color and texture. We would have a high quality of vanilla ice cream with as many different flavors of vanilla. If we could get the vanilla ice cream manufacturers to make a standard vanilla flavoring, we could get uniformity on that point. If the gelatine used were uniform in quality, our ice cream would be

* Head of Dairy Dept., Oklahoma Agricultural and Mechanical College, Stillwater.

One of Our Many Drying Wheels

When filtered, the liquid Gelatine is hurried to these great wheels and after a single turn is dropped directly into barrels. Our patented process requires less than one-half of one per cent of the time usually necessary to dry Gelatine.

Dried Gelatine

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

form in stability, and if our raw materials were uniform in flavor and quality, we would have greater uniformity in flavor and quality of the ice cream. A hundred different ice cream makers may have a hundred different ideas about making the ice cream, another factor in our lack of uniformity.

We cannot, however, expect to attain uniformity in the manufacture of ice cream as we have reached in the making of butter and cheese. The making of butter and cheese is a simpler process, fewer ingredients enter into its manufacture, and uniformity can therefore be reached to a very high degree.

The question might be asked as to why ice cream should be uniform in quality. Some of you may say you do not want your ice cream to be like your competitor's, for you want to build up the demand for your own particular kind of ice cream. You may want to have a great difference in flavor, texture, etc., in order that the people of your community will recognize your own ice cream when they taste. Ice cream is becoming known throughout the entire world, and in order to make it just as popular as possible among the people, it should be of the highest quality and uniformity it is possible to maintain. People living in one city should be able to obtain ice cream in another city of just as uniform good quality as they can find at home. They should find the same quality in one state as in another, and the same quality in the old world as in the new, and by thus cultivating the desire of the people for a uniform good quality of ice cream, the maximum per capita consumption throughout the entire world can be obtained.

You heard a talk yesterday by Mr. Wylie about the production of milk in the vicinity of Tulsa. The work being done along this line is another step toward a bet-

ter quality of ice cream. The best quality of ice cream can be made when fresh raw materials are available, and you ice cream manufacturers should encourage the production of milk in your communities by using as much of the surplus during the summer months as you possibly can. You help yourself to make a better quality of ice cream, and you lay the foundation for a better quality for the years to come. Good raw materials are to a great extent responsible for the high quality of ice cream made in Milwaukee. Ice cream manufacturers in that city have available the best quality of fresh raw materials. There are big dairy herds under the care of farmers who make a specialty of producing good quality milk, farmers who know how to produce milk of good flavor, and take proper care of it until it is delivered to the manufacturer.

Of course the raw milk must be purchasable at a reasonable figure, and the ice cream manufacturer must not compete with the milk dealer at present prices of finished dairy products, and pay for raw milk the same price as the milk dealer pays. Yet, the milk dealer cannot profitably use all the surplus during the summer months, which should be available to ice cream manufacturers at a figure they can afford to pay for it. Usually the surplus milk can be purchased for less money during the flush season.

About sixty per cent of the ice cream made here is a reconstructed product, and chiefly because of the high cost and higher price of raw materials. Products of good quality milk here should be encouraged at all times, in order that the best quality of ice cream may be made. Farmers get discouraged, and justly so, when they must sell the product of their cows for sour cream prices. There isn't enough money in dairying that way to keep their increasing and improving their herds, unless a fluid milk market is provided for them.

There has been quite a bit of agitation along this line in Oklahoma recently, and we have been criticised for not making a market for whole milk in Oklahoma. This is quite a problem, and I have given considerable thought to it. Cheese factories have been suggested as a partial solution, but we would then have to solve the problem of curing and marketing the cheese. In this country it would be necessary to provide refrigeration for the cheese curing rooms, which would be very expensive, and would make it impractical to establish cheese factories. The best solution of the cheese curing problem that I have found is to establish central factories to take care of the fluid milk, and have a central curing plant, to which the little factories could send their cheese every day or two, thereby doing away with the need of expensive equipment for refrigeration.

Before we establish cheese factories in this country, however, we must look around for a market for cheese, and we must educate the farmer to produce a better quality of milk. Milk of the highest quality is needed to manufacture a good uniform quality of cheese. The farmer must take care of the milk, cows must be cleaned before milking, the farmer must use plenty of hot water for the cleaning and sanitizing of pails, cans, coolers and other utensils. The farmer must also learn the necessity of proper feeding. I saw cows last May that were being milked, and wondered how they could give milk at all, they were so thin. They were of the good dairy type, the type that will milk off every ounce of flesh they can spare. The best of dairy cattle will not yield the farmer a living wage and profit unless they are properly fed.

And in order to produce the best quality of ice cream, we must have the good quality milk that I have just been talking about. The milk must be hand-

the most sanitary manner possible, and ice cream manufacturers should try to get this whole milk. It should not be necessary to use cheaper ingredients in the manufacture of ice cream. I would rather see the ice cream manufacturer use a good quality of ingredients and charge \$1.50 for his ice cream, than to use poorer quality products and sell it for 90 cents. I know of ice cream factories that have built up a wonderful business on quality alone, and they charged from ten to twenty-five cents a gallon more. The people appreciate quality. I still believe that ten per cent of butterfat is sufficient for our ice cream, but there are many factories making cream of a much higher fat content, making big sales, and getting a good price for it. Some factories in the East are making a 20 per cent butterfat product, and have built up a wonderful business for this quality of cream.

The chief point in favor of the ten per cent ice cream is that it is a more nearly balanced food product. I do not mean that it is a better quality product so far as the ingredients are concerned, but it more nearly meets the demands of the human body for fats, sugars, and minerals.

There are many other things I could talk about in connection with ice cream, but they are old subjects. We have been discussing overrun, temperatures, acidity, and these problems are not solved by any means, but I haven't anything new to present to you along this line just now. No one knows all about overrun. For instance, just a short time ago I had a letter from a man up North who said he couldn't keep his overrun down below 150 to 160 per cent. He explained his procedure to me thoroughly, and I suggested to him that he weigh a quart of his mix, and then weigh a quart of his ice cream, and see if his calculation of overrun

was OK. He wrote back that his first figures were a mistake, and that some adjustments had to be made by his overrun tester.

Only a few years or so ago we thought it was necessary to develop acid in the mix in order to obtain necessary viscosity of the mix, but experiments have proved that this belief was unfounded. It is not necessary to develop acid in your mix in order to obtain a good overrun. We have found that ageing the mix without acidity produces a better overrun than ageing a mix with a high acidity. The low acid mix will whip the air much better. I was quite sure of this as far as 12 years ago, and experiments since that time have proved the theory to be correct. If any of you like to experiment along this line yourselves, take ten samples of cream each one, two, three, four, five, and six days old, in which the acidity has had an opportunity to develop slightly, and you will find that the low acidity cream will whip much easier than the other. If you have any doubts, it is an easy matter to take ten samples and try it yourself. A year ago last summer I made more than one hundred of these tests, and found that high overrun was obtained from a mix with low acidity, and that it is not the acidity, but the ageing that gives the mix its property to retain a good overrun.

The amount of gelatine, the quality of gelatine, the method of adding it to the mix also have a great influence on the overrun, which also makes the overrun harder to control. In this state the overrun is of so much consequence, but in the state of Kansas there is a law which requires that ice cream must contain 4.75 pounds per gallon. Ice cream factories in Kansas cannot comply with the law, for the overrun is so difficult to control. One can of ice cream may weigh 4.75 pounds to the gallon, and the other 4.9 pounds. Both may have been made in the same factory, under the same conditions, and from the same batch of mix.

Another question is sanitation. It would do no good to pasteurize the mix and use the best of methods if the mix is allowed to become recontaminated after pasteurization. Extreme cleanliness must be practiced in order to hinder as much as possible the growth of bacteria. There has been no definite standard for bacterial count in ice cream fixed, but the American Public Health Association is about to agree on a count of 20,000 per cubic centimeter. This count, of course, would be approximate, for it is impossible to use the present methods to count the bacteria accurately. In ice cream factories it would be impossible always to produce cream with a bacterial content of less than 20,000. The monthly average should be less than that. It means that a man could not have a count one day of 1,000,000, and 10,000 the remainder of the month. The average would be many thousands above the standard.

The bacterial count of ice cream is of much more importance than being not only a check that the manager can have on the ice cream making processes, but it shows him how his employes are handling his product from the sanitary point of view, and gives him a good idea of the quality of raw materials he is using. In 98 per cent of the milk from unclean cows produces a bad flavored ice cream, and the bacterial count is a most effective means for its detection. A bacteriological test provides a check on the cleanliness of utensils on the floor of the ice cream factory. Utensils must not only be clean, but they must be bacteriologically clean, in order to produce an ice cream with a low bacterial count. The point cannot be too strongly impressed in the mind of the help in the ice cream factory, for it is one point that can be made to produce or to fail to produce a quality product.

Pasteurization is Essential.

Pasteurization of dairy products is so essential that we have laws requiring it, but the public do not believe that pasteurization is absolutely necessary in order to provide absolutely safe butter, market milk or ice cream. Even some of our physicians do not know, and do not believe that dairy products should be pasteurized. I can give you an example of this from my own personal experience. An athlete at the university was taken to a physician, and remarked that he was drinking only of pasteurized milk. The physician told him to stop and drink raw milk instead, for the pasteurized milk did not have a single vitamine left in it. The athlete asked me what I knew about it, and I told him that his statement was absolutely untrue, and to tell that he hasn't read anything in the last ten years. McCollum, discoverer of vitamins says, that vitamins at all are destroyed in the process of pasteurization of milk, one-quarter of a teaspoon of orange juice a day would furnish the body with the vitamins lost through the pasteurization of the milk.

It might be interesting for you to know that when I began answering inquiries through The Ice Cream Review five years ago, I have received 1979 letters from ice cream factories regarding their methods of making ice cream, and that 42 per cent of them have come from the southern half of the United States. They come from every state in the Union except four, twelve per cent came from Wisconsin. Inquiries came from eight foreign countries. The general nature of inquiry is about the same as five years ago, and that new factories are being established and that our experience up to five years ago is not quite so general as understood as we might suppose.

Of course, we are all disappointed that we did not get the \$190,000 dairy building at the college that we started out to get a year ago. It appears that the good work we did to get it started will have to be done over again. We appreciate the support we received from the ice cream manufacturers, and hope you will be back of us again when we make another attempt. The building we now have ought to have been destroyed 15 years ago. Dairy farming, however, has received a new stimulus. We have completed the new dairy building at a cost of \$52,000, and bought \$7,500 worth of dairy cattle, representing the Guernsey, Holstein, Jersey, and Ayrshire breeds. In three breeds, we have a representation of dairy cattle as can be found in any of the colleges of the United States. Possibly our colleges have a better herd. We have a Holstein cow that holds the eighth place in her class for the production of milk. We had a student judging team at the National Dairy Show this year for the first time, and our team won the first prize in judging Holsteins, and the team placed thirteenth in the contest in which 39 states were represented. We feel pretty proud of this, and especially because Texas, a great rival of Oklahoma, placed twentieth in the contest. This contest helped put Oklahoma on the map, and the dairy industry of the state will be benefited.

President Parker: If there are any questions, Mr. Baer will be glad to answer them. I am sure we all appreciate the good ideas he has given us. It is too bad his address was so short.

Early Cass of Tulsa will now talk to us about the inspection. Mr. Cass.

Oklahoma City, Okla.
Secretary,
CLARENCE R. HAUKE
Oklahoma City, Okla.

FROM THE WOLFHOUND'S SECRETARY.

Gents and Friends:

Oklahoma convention recently held at Tulsa, is now history—and what a history-making meeting was. From the hour of the opening gun to the close of the most instructive programs ever attended was put over in real Oklahoma style. Every present went home with new ideas to put into practice from the interesting speakers.

Speakers covered the fast growing ice cream industry from its infancy up to the present time, stressing on the up-to-date progressive methods that should be put into every day practice to insure success. Tulsa should be, and is indeed proud of its part in putting over this convention in a BIG way.

C. R. HAUKE.

At the advice of Tulsa chief of police, was on in privacy. The writer is not aware of who the winner, but after one of these private sessions talking to Will Carpenter, Mr. Haines, Mike and Tom Stewart, all of whom were in great shape, jingling something in their pockets that did not look like keys. Ask them.

Another strange thing that the writer observed late in the evening of the big dance while walking through the kitchen just off the dance hall, is a young couple dancing to beat the band. After a glance, I discovered it was Happy Will Hawk, with one of the colored hotel maids. When he was called to the colored line, he blushed, as if and said "having too much fun, can't distinguish tonight." Everything goes on a night like this, of course, this was a terrible shock, but say, this is compared with what came later. I hesitate to say, but here goes:

Other than our good friends, J. B. Porter, F. J. and Charley Smith were engaged in one hot African Golf with the singers (young ladies, of course). I think Bouvy was the winner, for at one time he had 32 cents stacked up before him. Some of you, believe me.

In all every minute of the time was taken up. When the bride and groom were there. Did you see the way Mr. Castle talked? Everyone just seeing

With reference to the Wolf Hounds, they were all there with their hair braided, all primed to the hilt. You say entertainment? Well, the Wolf Hounds were in charge—nuff sed. The program was complete in every detail. Of course, some of this

him could tell he was recently married, but not so with beautiful Mrs. Castle. One would think, "well, just one of the fine looking Tulsa High School girls." What a handsome couple they are. May God bless, protect and guide them in this life's journey is the writer's wish and prayer.

May the New Year bring Happiness, Prosperity, and Health to all.

Yours with a BOOST to all that is RIGHT,

C. R. HAUKE,

Secretary & Treasurer.

* * *

WOLF HOUNDS ARE HAPPY.

One of the biggest and most instructive state conventions ever held by the ice cream manufacturers, is now history. Tulsa, Oklahoma, may well be proud and even feel haughty. Not a man, woman or child that was present but what sings all praise to the Oklahoma ice

M. E. CUTNER.

cream manufacturers. Of course the Famous Oklahoma Wolf-Hounds, as usual were up to their necks to see that everybody had a "rip-snorting" time. Such educational talks, such speaking, and entertainment, with the merriest, happiest bunch of dancers never was seen before at any state convention. The fine part was the spirit of joy and happiness coupled with that Home feeling of real Brotherly love that prevailed throughout the entire convention, "Great Spirit Boys," keep it up forever.

And to think at this gathering, the one big announcement was made. Good old Mike Cutner, who most every one knows, has cast his fortune with that hustling, wide awake St. Louis firm, the Haines-Carpenter Co.

Gaze at the above face, men. Don't you think Oklahoma should be proud to have him within its borders? The writer will answer that question. Yes, Mr. Cutner, we welcome you, and your firm. May all your troubles be the trouble of taking care of the business that Oklahoma has for you. May they come in bunches, (meaning orders) so that some day you will feel justified in opening a large branch in our state.

Mr. Haines, Mr. Carpenter, & Mr. Cutner, again I extend the hand of welcome to you. As of yore May God bless and guide you is our wish.

Yours with a boost to fair and honest business methods,

C. R. Hauke,

Secy. & Treas. Wolf-Hounds.

* * *

CAN YOU IMAGINE—

- O. B. Witte being mistaken for Ex-governor Walton?
- F. E. Robinson picking the prize birds at the poultry show?
- R. H. Varney having to chaperone Fernald?
- B. M. Derby imitating Ted Lewis and his dancing?
- J. H. Bennett bringing his wife along?

(Continued on page 112)

SIDE LIGHTS ON THE OKLAHOMA CONVENTION

THE general topic of discussion is drifting son away from the processes of manufacture problems of obtaining raw materials and sel

* * *

Oklahoma manufacturers may not be getting as in actual dollars and cents as are ice cream manufacturers in other states, but they are saving a lot of on re-icing. It is not how much we make that It is what we save, and the icing idea in Oklahoma saving its share.

* * *

Secretary Porter's report brings to light a good work the association has done in a year. In there is strength. A handful of manufacturers have had a fat chance to stop a legislature, even the Oklahoma legislature, passing a lot of fool law ultimately only increase the cost to consumer, and up that much more red tape in the governmental But then lawmakers must do something to provide jobs for their friends.

* * *

The Menasha Printing & Carton Company by the hotel lobby provided a dandy place for the to loaf, and incidentally, Roy Gute, the carton man a nice bunch of orders. Everyone helped him Roy J's. ice cream. That Nelson cabinet, Menasha ton and Tulsa ice cream proved a mighty good tion.

* * *

Some of Oklahoma's best organizers and co-ops didn't show up at the convention. Mustagot their mixed. If they don't watch out Oklahoma will her next convention right to their home town—adon't mean maybe!

* * *

They say that Tulsa ice cream manufacturers to have some real milk, fresh from the cow, the cream making within the next few years. Judging the program the Chamber of Commerce has laid their hopes are going to be realized.

* * *

Professor Baer thinks Tulsa already has about the best ice cream in the state. If it is all like that at the dinners at the hotels, we agree with him couldn't expect to find any better—even in Milwaukee.

* * *

Those Nizer cabinets were a great attraction course. They seem to be all that an ice cream could ask for, and they save a lot of expense for manufacturer. We know of a druggist in Milwaukee who would give his so-called kingdom for one of More power to you.

* * *

President Parker is deserving of a lot of thanks from the Oklahoma manufacturers. He and his right man, Mr. Porter, and the legislative committee did a mighty good legislative (or should we say anti-legislative) work the past year.

* * *

Mr. Lund rather startled the conventionites with figures on Eskimo Pie and the results of his big tising campaigns in the east. That's going to much for progressive Oklahoma. Her good ice

Final Judgment

The verdict of the public is final when it comes to the judging of food products and from their decision there is no appeal.

Quality and flavor are the dominant factors in their judgment of ice cream products and these factors are due to careful selection of good ingredients, scientific manufacture and the maintenance of strict sanitary cleanliness throughout the making processes.

These factors of quality and delicious taste are greatly assisted in hundreds of ice cream plants where the use of

Indian in Circle

in Every Package

definitely protects the fine quality of ice cream products by the sweet, wholesome, sanitary cleanliness it provides throughout the plant.

Nor is this all, for experience is proving every day that the quality work of this cleaner is the most efficient and economical the ice cream manufacturer can use.

Ask your dealer.

THE J. B. FORD CO.

Sole Mfrs.

Wyandotte, Michigan

The War of Competition

The concern that succeeds is the one that is able to lower its production costs or improve its quality. A **CP** Mechanical Refrigeration system enables the ice cream maker to do both.

It produces refrigeration at a lower cost than any other method can do, it saves labor and by giving the operator absolute control of the temperature, enables him to produce a better product.

Demands Mechanical Refrigeration

CP Refrigeration Systems are used by over 5,000 concerns, mostly in the creamery, ice cream and dairy industries. They are made in a wide range of sizes from 1/4 ton up and can be obtained in either vertical or horizontal types, and be driven by motor or belt as desired.

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

manufacturers are not going to let any easterners sell more Eskimo Pies per person than they do. We suggest, Mr. Lund, that you keep your eye on Oklahoma. She's going to have a surprise for you.

* * *

Tommy Stewart suggested that they have an Oklahoma day at the national convention. Too bad they didn't have one at the last convention. Every day was Oklahoma day in political circles about that time, however, so Oklahoma got her publicity through other channels. But that special day idea is a good one; it would help to bolster up the attendance from states that are otherwise a little bit light in numbers.

* * *

No doubt, Early Cass knows what a milk inspector should know about inspection, but when he said he wondered what milk dealers and ice cream manufacturers thought of milk inspection departments, we wished that Harley Credicott of Freeport, Ill., could have been there to answer him. Harley gave his opinion at a Chicago convention a couple of years ago in a manner that was interesting.

* * *

If the ice cream manufacturers and supplymen continue to bring their wives and daughters to the Oklahoma convention in such numbers as they did this year we shall have to have a ladies' auxiliary of the Wolf Hounds.

* * *

Tulsa is pretty well represented on the list of officers of the association for next year, having both the president and secretary. We took a snap shot of them in front of a drug store which was somebody's stop, but that didn't make any difference.

THE ORIGINAL DOUBLE-RING CONE

Try This Interesting Experiment

Take two McLaren "Real Cake" (Double Ring) Cones in one hand. Press down squarely on top cone with other hand to the point of breaking the cones. See how much pressure the ring withstands without breakage.

This simple test will demonstrate convincingly the value of the PATENTED Nesting Ring as a breakage preventative.

A CONE WITHOUT A
NESTING RING IS OLD-FASHIONED

W. L. Castle's exhibit of Blanke-Baer fruit only one day. Whamsamatter "Vern;" were they too tempting, or did the Shriners run away with the evidence?

* * *

One of the Wolf Hounds wanted to have a picture taken over again. He was chatting with Mr. I. C. Manufacturer, and during the conversation, and while the picture was taken, he got an order. Mr. I. C. M. was sore because he was out on the picture, and Mr. W. Hound was afraid Mr. I. C. M. would cancel the order. Tuffluck.

* * *

Clarence Hauk made a good president of the Wolf Hounds, and it was a good choice of the members. They made him an officer again. Otis Witte will make a good executive. At any rate, he made a good beginning, and all the Wolf Hounds know that the association will be properly governed the next year. Unfortunately, isn't it, that Witte has been mistaken for a governor. By the way, is anyone looking for a

* * *

We'll challenge anyone to carry the youngest member of the Wolf Hounds around in his arms. He is no less than Russell Smith, better known as "Concentrated." Of course that name hasn't anything to do with Hudson's No. 52 concentrated which he is. Russell weighs only 218 pounds. Nothing concentrated about that! When the group picture was taken, and the perpetrator of these remarks stood on top of a Cadillac coupe. When the tires blew, he heard an Oklahoman remark he guessed they were going to have another election. Russell is the son of J. Smith, who for the past two years has represented Hudson Mfg. Co., in the South. Father and son are dividing the territory, and "doing well."

* * *

Anyone outside of the ice cream manufacturing industry would have believed Professor McElroy exaggerating when he said a cubic centimeter of ice cream may contain as many as several trillion bacteria. His statement provides the ice cream maker another puzzle to puzzle over, for Professor Baer says the Dairy Association is about to adopt a bacteria standard of 20,000 for ice cream. If your city health department should fix this number as a minimum, and the ice cream happens to take a sample of a batch containing a million per c. e., you might as well shut up shop for a couple of years.

* * *

Professor Baer said all ice cream making equipment must be kept bacteriologically clean. For those of anyone looking for a definition of this term, it is plain that all equipment in which any part of the ice cream is handled must not only be thoroughly washed and dried, but all crevices, if any, must be cleaned out, preferably closed up entirely so no milk or cream can remain in them, and the equipment must be sterilized with steam. Temperatures of 200 or more are effective in destroying bacteria, in other words, in making all equipment bacteriologically clean.

* * *

Few people noticed it, we are told, but "Swede" Anderson announced that the cloak room was looking for M. T. Cochran because his coat was leaking. J. Good Conley rushed up to the front of the C. and offered him a Sealright container. Can you guess what for nerve?

Mojonnier 3' Vacuum Pan at the plant of the
Ice & C. S. Co., E. Liverpool, Ohio.

Users of the

MOJONNIER VACUUM CONDENSING UNITS

have featured among its advantages, the following:

1st. **PRODUCES A BETTER FLAVORED PRODUCT.** The milk boils vigorously at 145° F. This temperature is never exceeded. This prevents any possibility of "cooked" flavor. The steam driven off and condensed contains all of the "off flavors," leaving only the real milk flavor. This method makes possible the use of fresh skim or whole milk, sweet cream or butter.

2nd. **A BETTER PASTEURIZED PRODUCT.** R. W. Peterson and P. H. Tracy (University of Illinois) in their Bulletin, May, 1922, on the "Condensation Process of Preparing an Ice Cream Mix," under caption of "Conclusions," state:

1. A uniformly prepared ice cream mix may be made by the condensation process, using milk, butter or cream, sugar, and gelatin.
 2. The condensed mix is easily standardized to a uniform composition by having the butterfat, milk solids not fat, sugar, and gelatin in the proper proportion before condensing. A definite yield is thus obtained.
- Why reduced costs? Here are the figures on a batch made recently in a plant in Pennsylvania (name furnished on request), 11% B. F.

Stirring Convention Held by Pennsylvania and New Jersey Manufacturers

Vital Trade Problems Discussed at Altoona

CONSTRUCTIVE features and spirited sessions marked the seventeenth annual convention of the Association of Ice Cream Manufacturers of Pennsylvania, New Jersey, which was held at Altoona, Pennsylvania, November 11, 12 and 13. The convention sessions were largely attended and enthusiasm ran high at all stages.

Problems vital to the ice cream industry were discussed. The subjects included ice cream research work, color in ice cream, sales promotion, ice cream advertising and various plant problems.

E. J. Fischer, Philadelphia, one of the speakers at the opening session, discussed "Individual Packages and Winter Novelties," telling the delegates that the chief purpose of novelties was to increase sales, to keep the organization intact throughout the winter and to get people to eat more ice cream. Against novelties, he said, are the extra equipment, extra material, large delivery, more icing and the fact that the equipment is a dead loss when the public demand wears off.

The Pennsylvania State College is co-operating with the ice cream manufacturers by working to lower costs on dairy farms, according to A. A. Borland of the Penn State College, who addressed the convention.

C. L. Goodling, also of the state college, explained that it was necessary to obtain money by popular subscription to a \$2,000,000 building fund to provide adequate facilities for the students. He said ice cream manufacturers had contributed \$7,000 to the fund in sums from \$200 to \$1,500. One of the new dormitories will be dedicated to the dairy, livestock and ice cream industries, he said.

The law passed by the last session of the legislature was approved by convention president E. E. Rieck, who stated that the industry is on a higher plant than ever and represents the best thought and practices of business.

Secretary J. W. Neuman, York, reported 217 members; Treasurer E. Walker of Warren reported the balance of \$1,818.00, and W. H. List, Jr., Newark, reported twelve members in New Jersey.

The degelates were welcomed to Altoona by Mayor Charles E. Rhodes, and the response to the address of welcome was made by W. H. List, Jr. About 500 delegates and visitors were present at the opening of the convention.

At the second session of the convention Alan R. Fernald, Detroit, discussed the food values of ice cream declaring that "an appeal loses strength when it becomes too general. Don't merely mention flavors; to get the best results, describe flavors."

Dr. Charles H. Kimberly, New York, advised against making ice cream too rich, giving the consumer a feeling of overloading. He suggested 8 per cent butterfat and 15 per cent sugar as the maximum. He was opposed in his view by O. E. Williams, United States Department of Agriculture, Washington, who recommended a rich

product. The latter said different states are increasing the butterfat percentage.

Glenn P. Cowan, Detroit, spoke on iceless cabinets. Dr. Thomas B. Downey, Mellon Institute, Pittsburgh, spoke on "Edible Gelatine." "Standardization of Costs" was the subject of an address by C. L. Tufts, Philadelphia.

The annual banquet of the association was held at the Penn. Alto Hotel on Wednesday evening. At the concluding session of the convention, Thomas G. Magee, Altoona, gave some reminiscences of the ice cream industry in Pennsylvania in years gone by. He paid tribute to the late Robert Crane who was first president of the association, which was organized seventeen years ago. He said that at the time of organization the legislature was in session and one of the first things taken up was the effort to have a law passed regulating the amount of butterfat. With the co-operation of others

such a bill was drafted and passed and is still on the statute books.

Mr. Magee paid high tribute to Mr. Crane, Dr. Wm. Frear, I. Caum, Dr. Edgar G. Ecker, and others who have passed away, to E. E. Rieck, W. E. Hoffman, J. W. Neuman, W. H. List, C. Fickes, Thomas Hall and Ed. Walker, all of whom are still active in the association.

"Make a good product and sell it," he said, "will get the business," he said, closing.

Among other speakers were S. Jordan, president of the Association of Ice Cream Supply Men; W. F. Jennings, Parker Brand Co., Thomas J. Stewart, former president of the Salesmen's Club; The Association of Ice Cream Supply men; George M. Brink, C.

Ice Cream Co. Philadelphia; and George R. Moffitt, bacteriologist, city of Harrisburg, Pa.

Newark was selected as the scene of the next convention. This will be the association's first convention with the New Jersey members as hosts.

SOUTH DAKOTA MANUFACTURERS TO MEET IN FEBRUARY.

The ice cream manufacturers association of South Dakota will meet at Watertown February 19, 20 and 21, 1924, for its annual convention.

These dates were set for the annual convention of the South Dakota Dairy Association, at a meeting held at Watertown in November, and the ice cream manufacturers decided to hold their convention at the same time.

The dairy association has offered a prize of \$250 in premiums for the exhibit of dairy products in connection with the convention. The program of this connection is being arranged by the officers to be announced as they say.

NEW OFFICERS AND DIRECTORS

President, E. E. Rieck, Pittsburgh; vice-president, W. E. Hoffman, Tyrone; secretary, J. W. Neuman, York; assistant secretary, C. R. Fiske.

Directors: E. E. Rieck, Pittsburgh; W. E. Hoffman, Tyrone; Thomas Hall, Harrisburg; George N. Brink, Philadelphia; Wilbur F. Scott, Philadelphia; William List, Newark; Joseph Castle, Irvington, N. J.; Edward Walker, Warren; and Donald E. Wiseman, Erie.

OUR ADVERTISERS ARE YOUR FRIENDS—BUY FROM THEM.

President's Address to Pennsylvania Association

By E. E. RIECK*

THERE have been times in my life when I have thought that the business of making ice cream was a hard job, but as I stand before you today I realize that a much harder job is the making of a speech. I know how to make ice cream but I do not know how to make a speech, and so I am going to talk to you men today just as if I was in our plant.

There annual gatherings of men interested in the some things become more important as the years pass

E. E. RIECK.

by. Looking over the number of you here today and contrasting this gathering with some of the meetings in the early days causes me to pause for a moment and consider the importance of this business of making ice cream and the responsibilities with which we are charged. The problems that have arisen in these years, the work we have accomplished, the results to the industry, all pass before me and I am proud of my connection with this healthy and thriving association.

I remember, too, the very many pleasant hours we have had together, the good times, the hearty laughter and the close association one with the other, and I say to myself that if no other good ever came of our meeting together each year, the friendships we form, the pleasure of seeing each other year after year is well worth all the effort and all the time we spend in getting together.

Roosevelt said that every man owed something more to his business than the mere making of a living out of it. He was right. It is the duty of every man to contribute something of his time and energy to the general good of the line of business in which he is engaged and if, in addition to the satisfaction he gets from doing his part, he is blessed with a fellowship, a friendship and an acquaintance such as we men enjoy, then he is a happy man. And today I feel amply repaid for any humble effort I may have put forth in the passing years in coming to these gatherings.

Association Growing.

Since we last met together this association has enlarged its membership. The manufacturers of our sister state, New Jersey, are now allied with us and we get the benefit of their experience and counsel as they get the benefit of ours. The association is strengthened by the addition and each member gains proportionately.

During the year that has passed important legislation has taken place that will have a lasting and permanent effect on our business. The new law prohibits the

use of fats other than milk fats in ice cream is a forward which every man in this room will appreciate. Wise legislation of this character, legislation aimed toward a higher standard of practices, impresses the maker of good ice cream in the association and at the same time impresses the public with the sincerity of our work.

More work of this sort is ahead of us. This business of ours is growing in a fine, steady way; a permanent growth not in sudden spurts and discouraging but evenly and sturdily. Within the recollection of almost every man in this room today is the crude beginnings of this business, the early struggles, the carelessness and the failures. Today it is gone on a high plane and Associations such as this are wanted to keep it there. We must guard it and preserve it if legislation for better or more uniform sanitary conditions or anything of the sort is necessary, this association must come forward and align itself on the right side and do its full part to finally procure what is just and fair to both public and manufacturer. This is the work of such associations as ours. I cannot accomplish what any number of individuals cannot because it represents the best thoughts, ideas and talents of these individuals.

Ice cream stands well in the public mind today; it is accepted for what it is without suspicion. We know now that we can frankly tell the public what we are doing and how we do it. Our advertising is constructive—not destructive. In the past ten years the character of advertising has changed for the better, the volume of it has increased and every man in this association, whether he participates in the expense or not, reaps some benefit.

And now, as I come to the close of my talk, I proach a subject that I have purposely put off until last. I stand before you today and talk to you as a presiding officer because the president of this association has laid down his work, and it is marked "Finished." I doubt if there is a man in this room who does not know of Robert Crane, affectionately known as "Bob" Crane. A gathering of this association without "Bob" Crane does not seem like a real gathering, and it has been years and years before the memory of him has faded from us. I do not need to speak of his untiring work; you all know it. I do not need to mention his long personal qualities; you know them.

All I can say is that I want to appoint a committee to draft proper resolutions in respect to this departed brother for the records of this association, and to do so with all the sincerity and earnestness that I can command that in the death of Robert Crane the Association of Ice Cream Manufacturers of Pennsylvania and New Jersey lost a diligent worker, a loyal member and a most and lovable character.

If you want a Manager, Superintendent, Executive Chemist, Bacteriologist, Operator, Pasteurizer man, help of any kind, "The Ice Cream Review" can help you find the best available man. If you want a position, "The Ice Cream Review" can help you as it has helped hundreds of others to secure a good position.

* Rieck-McJunkin Dairy Company, Pittsburgh, Pa. Delivered before annual convention of the Association of Ice Cream Manufacturers of Pennsylvania and New Jersey, Altoona, Pa., Nov. 13, 1923.

Gentlemen:

We take pleasure in saying that the Rogers condensing pan installed in our new Wellington plant is a great improvement over the pans heretofore used. We find that we can boil at a lower temperature with water at a higher temperature, and with less entrainment loss than has been our experience with other pans. The pan also has a decidedly greater capacity. We are very glad in this way to express our satisfaction with this installation.

Yours very truly,

THE TELLING-BELLE VERNON COMPANY.

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Proceedings of Texas Ice Cream Manufacturers' Convention

Lively Convention Held in Galvez Hotel, Galveston, Texas, November 26, 27 and 28

New Officers

President—W. W. Workman, Waco.

Vice-President—D. J. Carithers, Wichita Falls.

Secretary-Treasurer—A. J. White, San Antonio.

MEETING called to order at 2:00 P. M., November 27 by Vice-President Mathewson of Marshall, Texas.

Vice President: Gentlemen, you will now please come to order. In the absence of J. J. Sullivan, president of your association, who is ill with a sore throat, it devolves upon me, as vice-president, to perform the duties of our president. Last year when Mr. Sullivan was elected president, I believe he had a sore throat and was unable to speak at that time and I am just wondering if this is the same sore throat that he has now. If it is I am sure that we all feel sorry for him.

Mr. Sullivan tells me that he has prepared no written address and neither have I, and I am not going to burden you long with what I have to say as we have some very important talks on our program for this afternoon.

I am very gratified to see so many of you present at this meeting. Not only so many members of the Texas

association but such a good representation from small and large plants. I believe that we have in this state the most representative ice cream manufacturing association in the country. We have in our organization men who are operating the largest and most modern plants in the state as well as men who are operating smaller plants located in the little cities and towns.

We have a good crowd to draw from and our discussion at this meeting should bring to light ideas of manufacturers operating under widely different conditions. I am also pleased to note the large attendance of supplymen, better known in this state as the Horns. Their optimism, pep and good-fellowship at the well being of our meeting and we are very fortunate to have them with us.

We will have to rearrange our program a little for the afternoon and will place John L. Darrouzet on our list. We will now hear from Mr. Darrouzet on the subject of Local Co-operation.

* * * * *

Local Co-operation

By JOHN J. DARROUZET*

I AM at a loss to understand why I was called upon to give a talk to you ice cream manufacturers. It seems that I am particularly out of place here inasmuch as I do not eat ice cream. Surely I was not picked as a speaker because I am a good ice cream customer.

Regarding local co-operation, I believe the general term of co-operation is the best thing that has ever happened, good for any organization of thinking men. The trouble, however, is that we do not have enough of it. We do a lot of talking about it, agree to co-operate but we do not co-operate. Let us get together and quit cussing the other fellow and co-operate.

A few fellows, such as ice cream manufacturers here, get together and co-operate, they help one another to sell more ice cream instead of trying to take it away each other's customers. In other words, co-operate among themselves, but there is the fellow on the outside who needs attention. These co-operators may be talking about him, antagonizing him and trying to take away his business. He may be doing the same thing. Instead of having a man like this on the outside, pull him into the ranks, find out whether he is good or bad, and if he is bad, make him good.

Manufacturers of all classes have a great deal of their own trouble, they have lots of agitation against them, people are jealous of their success. People who are agitating against you are jealous of your business. If you join hands and co-operate you can go to the front and fight your own battles along a solid front and you are in better position to demand the rights that you are entitled to. I have seen many of the people in this

room in the legislature of the state of Texas fighting for their rights. If you were not bound together in organization and if you could not present your demands as a solid mass, you would not get anywhere.

There is one law that the Lord wrote in the Book and it is "Love me first and then love your neighbors." To believe that your neighbor is just as good as you are and that you are just as good as your neighbor is a source of co-operation. Co-operation between two men soon spreads to affect several or a group; then the cities; the counties and the states, with the result when anyone tries to destroy or your business, you can walk down the solid trail of righteousness in a body and demand what is right. A man who is alone is helpless. If one man will help another the result will be 50 successful men to one unsuccessful man. If these same men fight among each other the result is one successful man to 49 unsuccessful men.

You ice cream manufacturers are responsible to a great extent for the co-operation we may expect in the human race of tomorrow. You are doing business with the people who are going to be the men and women of tomorrow. The little boy goes to the ice cream store or to the ice cream factory every day. He knows the operator as the ice cream man; he idolizes this ice cream man and believes that next to his own daddy is the best man in the world for he is so good at making such good ice cream. If, by your own words and actions you create the proper impression in the mind of this little boy, you are creating a truism that will never die. You are the greatest man in your industry.

In closing, I want to emphasize this thought, you gentlemen, manufacturers of ice cream, are de-

Vice-President Mathewson: If that man ever runs for office you may bet that I am going to vote for him. I am sure that the members present have enjoyed his talk. You will now have the report of secretary-treasurer A. J. White.

Copy of Secretary White's report will appear in a subsequent issue of The Ice Cream Review.

Vice-President Mathewson: We have with us today Professor J. W. Ridgeway, who has for several years been with the Agricultural & Mechanical College. More recently, however, Professor Ridgeway has been taken from his duties of the college and is now engaged in

* * *

educational work for the Mistletoe Creameries in Antonio. By the way, I want to compliment the Mistletoe Creameries on their selection. I would like to have Professor Ridgeway to introduce Mr. Walton, our speaker. Professor Ridgeway, if you please.

Professor J. W. Ridgeway: It is a recognition that the people of Texas are depending to a great extent upon their agricultural resources. We are fortunate in having with us today a man who is proud to represent the agricultural resources of this state. I am very proud of Mr. Walton, for I have considered him as a student. He attended the first short course given at the A. & M. College at the time that I was connected with it. He was a county agent at that time and accepted the seriousness of his position just as seriously as he does his present position. He has a big job to believe that he has a big message to tell you. Mr. Walton.

Relationship Between the Extension Service and the Manufacturing Industry in Texas

By T. O. WALTON*

IN my address to you today I want to talk about our Agricultural and Mechanical College. I want you to know that it is your institution, that those who work there are your employees. We, at the college, are working for the people of the state and in order best to serve the interest of the state we must let a part of the responsibility lie upon the shoulders of the individual citizens. I want to interest you in the college and want you to know what is being done by your state institu-

tion because you are paying part of the taxes and support it.

The people of Texas have recently observed that theirs is an agricultural state. They have a half million farmers, approximately one-half of the total population, and agriculture is the basis of our prosperity in Texas. Upon agriculture are founded all the other industries of Texas. The physicians, the lawyers, the merchants, the bankers, or brokers, or wholesalers may have failures but such failures would not materially affect the agricultural industry. However, if the agricultural industry of the state suffers, all of the other industries and professions feel its effect as much or more than the agricultural industry does. The agricultural situation, however, is not as satisfactory today as some of our basic industry.

We need more agriculture in Texas. This year we have grown one of the largest cotton crops and have received the best price for the product that we have received for a number of years and the agricultural situation is now more satisfactory than some other parts of the nation. It is not, however, as satisfactory as it might be.

The fact that our agricultural industry of Texas at the present time on a fairly firm basis does not mean that it will always be so, and we should give thought to it at this time in order to insure a prosperous condition in the future.

State institutions have been created to teach the agricultural practices. At the Agricultural & Mechanical College of Texas we teach the science of agriculture and take up thoroughly every problem that affects the home and economic life of the rural people.

New Truths In Agriculture.

In our research division or experimental station we are discovering and developing new truths in the science of agriculture. We have one main station in Texas and fourteen sub-stations. In the main station we do the experimental work and investigation for the entire state. The theories that are developed at the main station are put into practice in the sub-stations, so that we may observe the results under different climatic and soil conditions. Other

The Reputation-Builder:

VANILLA

SPECIAL styles and fancy flavors of ice cream often make a hit, and sometimes become for a season or two great sellers; but they do not often build great reputations. That is rarely done except by makers whose VANILLA cream is finer than the average.

To make the BEST vanilla cream you must use the Mexican bean,—no other is quite the same; and to get that mellow, delicious bean flavor which, once tasted, is never forgotten, no other preparation is quite the same as

MICHAEL'S MEXICAN

VANILLA POWDER

NEW YORK TYPE
does not show the bean in the finished ice cream. Used in districts where the showing of the bean is an objection.

PHILADELPHIA TYPE
shows the bean in the finished ice cream. The accepted standard for use in French and Philadelphia ice creams.

Our Standing Offer to New Customers

Send us an order for Michael's Mexican Vanilla Powder. Use freely all that you need to give it a full, fair trial, and if it is not satisfactory, return the remainder at our expense, and we will cancel the entire charge.

that affect only certain sections of the state are, of course, worked out completely at the sub-station serving that particular territory.

Very often the experimental stations and colleges are criticized for being slow. People think that it takes too long for them to discover and prove what people have previously thought to be true. It does require, however, a great deal of time to prove beyond doubt that certain theories that have been advanced regarding certain phases of agriculture may safely be put into actual practice. I believe that we have made very substantial progress along agricultural lines.

There is one thing that has been accomplished that is of interest to the ice cream manufacturers. Dr. Frances of the department of veterinary medicine has worked upon the question of cattle tick for many months and we believe he has found the means of eradicating this pest, which has wrecked a great many dairy herds in this state and has discouraged a great many farmers from going into the dairy business. This is just one of the problems that the experimental station has worked upon that affects directly or indirectly the ice cream manufacturers business.

Then we have the extension department. This department was created in 1914 by what we call the Smith-Lever Act. This law provides that the extension division of the agricultural colleges in different states shall be charged with the responsibility of teaching agriculture and home economics to people who cannot and do not attend the college. I would like to call it the responsibility of teaching better farming and better home-making.

In the extension department we have specialists in every subject—a man or woman who has given special

study to his or her particular branch of the work. The real task of the extension department is to carry on the work that is developed by the experiment station, to help the farmer and his wife and help them to apply the results of the experiment station. This is done chiefly by demonstrations, by lectures, by publications, and otherwise.

Demonstration Methods Best.

We have found the demonstration methods to be the best. We conduct actual demonstrations on the farm of feeding dairy cattle, planting crops, and anything else that can be tried out under the farmer's own conditions. A few years ago the farmer looked upon anyone coming from a college as a book farmer. The word "science" and "scientific" had been overused. I am reminded of what happened a few years ago. I had given a talk to a number of farmers in a small town. After the lecture was over we stood in the street talking with ten or fifteen negro farmers. One of them and his wife seemed to be waiting for something. I stood a short distance away and seemed to be waiting for a chance to talk with me. After a while they came up to me and asked me if there was something they wanted, and I spoke up and said that her son was attending the College of Agriculture and was taking the course in home economics. I asked her what course her son was taking and she says, well she didn't know just what course it was, but she thought it was "scientific."

Agricultural science is simply good agricultural practice. It means the application of just ordinary common sense and practical systems that would help to make agriculture successful, and for this purpose an organization of specialists has been appointed to carry on this important work in the different states.

Then there is the question of why it is necessary to maintain such an organization, but we must remember that one-half of the people live on the farm and the other half of them have not gone to school beyond the eighth grade. It is essential, therefore, that we give the people the knowledge that the agricultural college has acquired, and to bring it to them for they cannot be expected to leave their farms and homes for months to acquire this information. It must be brought to them so that the farm people may be reasonably prosperous and can stay on the farms. Few of us know that the average income of a family on a farm is less than \$500.00 per year. The people of Texas are on an income of less than \$500.00 per year and it is the duty of the agricultural college and the extension and extension departments to enable the farmer to increase their income and to make agriculture a profitable and attractive occupation.

Then there is another point of view. There are relatively few groups of men such as we find in the ice cream business who will get together and cooperate. It is not such a great task to get the ice cream business together. You can see, however, how great a task it would be to get these farmers together to cooperate and to talk over their problems. Therefore, the greater necessity to have a satisfactory scientific leadership for the agricultural industries of the state. If the state does not furnish the farmer the constant type of leadership the farmer will be compelled to appoint a self appointed leadership which results in the destruction. In certain other states groups of farmers have organized upon the suggestion of self appointed leaders and we have seen this leadership work to the farmer's own disadvantage.

There is entirely too wide a disparity in the income of the farmer and the laborer in the city. In an article in this paper it was brought out that 63

Four Square methods

An institution is but the shadow of its policy—an intangible something which determines the worthiness of its product and the conduct of its business relations.

Always we have adhered to this guiding principle: Insure lasting success by four-square methods. Every "Cremo" Cone manufactured conforms to the high standard we first established. The quality of the ingredients never varies—finest flour, milk, pure cane sugar and vanilla, mixed in spotless factories and double-baked golden brown. Small wonder then that it is the most delicious cone made.

As a result, jobbers, dealers, and cone customers have been pleased and satisfied—so satisfied that our cone business is the largest in the world.

or 762 eggs are required to pay a plasterer for eight hours work. Seven and one-half bushels of corn or a year's receipt for a half acre are required to pay a bricklayer for eight hours work. Twenty-three chickens, 3 pounds each are required to pay a printer for an equal length of time. I do not know whether these figures are correct, but I believe they are relatively correct. If these figures are only approximately correct, they do show entirely too great a disparity between the income of the farmer and the organized city laborer. This is another problem for the agricultural colleges to work out to help the farmer to obtain a better revenue for his labor.

We have not been able to maintain the production up to the consumptive demands. We are not at present interested in the fact that the farm people are leaving the farms and moving to the cities, but when the consumption of farm products reaches the stage where it is greater than the production, we have arrived at the dangerous point. It is up to the agricultural college people to make the production of farm products more profitable in order that the farm people may be kept on the farms. We must make productive the vast area of unproductive land in Texas. We must prevent the destruction of hundreds of acres of cotton crops which are mere evidence of poor farm practice. This bad practice must be corrected and the best way it can be done would be through the proper education of the farmer.

Agricultural colleges need the support of cream manufacturers in trying to develop the interests of the state. With the right kind of help we can get what we want from the legislature. Some figures here that I want to give you and you will keep them in mind and that we may have from you the assistance that we need in order to continue our work. These figures are digests of the results of investigations made by special agencies as to the percentage of the national income. Some of it was given by the Council of Churches and the Society for the Prevention of Crime. They find that we spend for maintenance of Protestant Churches three-fourths of one per cent of our national income; for schools one and one-half per cent; for crime prevention eight and one-half per cent; investments eleven per cent; waste disposal one per cent; luxuries twenty-two and one-half per cent; miscellaneous thirteen and one-half per cent.

From the above figures you will see that the cost of education is not so great as the price we must pay if we do not have it. I thank you.

Vice-President Mathewson: That was certainly a splendid talk and one that we should give some thought to. We will now have the address of Professor Wren on the subject of "Salesmanship."

The report of the Texas convention will be continued in the February issue of The Ice Cream Review.

SIDE LIGHTS ON TEXAS CONVENTION

DALLAS IS NEXT MEETING PLACE

DALLAS was selected as the meeting place for the Texas ice cream manufacturers next year and one of the chief spokesmen from Ft. Worth seconded the motion immediately. How's that for co-operation? After Mr. Wren had given such a splendid talk on the value of ice cream associations and co-operation in general, there wasn't anything for him to do but to get up and favor Dallas as the next meeting place. W. W. Wren means co-operation, and it is more than skin-deep, too.

Those in charge of the entertainment of the Texas delegates are deserving of many words of praise for the splendid program they had arranged. For the benefit of those who did not attend we want to say that it was one of the best conventions, not only socially, but in every other way, that we have attended. The ladies were well taken care of by the Galveston manufacturers,

the Galveston Chamber of Commerce, and the Long Horns, while the business sessions were on in the afternoon. In the morning there was usually something going on for everyone. Many of the delegates did not know what an important seaport Galveston is until the ride Tuesday morning along the water front.

There was a little discussion at the Long Horn meeting of naming officers for the next year from among those residing in the city most likely to be named as the convention city. Most any of the Long Horns would make a good president or secretary, as well as a president, and it is a good plan to pick officers residing in the city where the next convention will be held. The officers of the suppliers' associations have much to do just before conventions that members do not know of and it is a great convenience to be able to work right in your own home town. We can depend upon C. W. Smith, as president; H. G. Cox, vice president, and Sherwood L. Quinker, secretary, to put on a splendid convention in Dallas next year.

Ladies' Auxiliary Active.

Hats off to the Ladies' Auxiliary of the Long Horns. Mrs. Wren, the new president, has a lot of plans already for the convention next year. In this spirit of the fullest co-operation of Mrs. Theodore P. Mc Austin, the vice-president, and Mrs. T. M. Thayer, Beaumont, the new secretary. If the ice cream manufacturers and suppliers attending the Texas convention next year haven't got a wife they will have one and bring her to the meeting or have some good excuses to present to the officers of the Ladies' Auxiliary. Being Leap Year it occurs to some only that it ought to be the duty of the ladies' to con-

Your Packing Problems Solved

OF course you realize that your *real problem* is getting bulk ice cream into the hands of the *home trade full volume* and still *perfectly hard*.

Filled fibre containers, all sizes and flavors, packed at the factory in practical O. & B. Triangular Packers, will solve your packing and home-selling problems *once for all*.

The fountain clerk will find selection of sizes and flavors easy. In fact, the fibre container makes it easy for the home buyer to purchase bulk ice cream, which, by the way, he *much prefers* to brick ice cream.

Cream factory-packed in this way stays hard even after reaching user's home; and since there's *no loss in volume*, dealers will co-operate.

In short, O. & B. Triangular containers and factory-filled fibre packages will solve *once for all* your packing problems.

matrimonial campaign for the benefit of some bachelor members of the association.

* * *

Professor Ridgeway has already promised Irene to the Dallas convention.

* * *

Of course there were the usual after-conventions in the smoker of the homeward bound Pullman. The one that The Review representative happened in on was indeed interesting. They discussed different phases of the manufacture of ice cream were not touched at all at the convention. J. A. of Mineral Wells nearly sold an ice machine. Kruse of Brenham, Texas, found out how to make on second-hand Fords and W. W. Wren had fun trying to get some information of D. J. C. of Wichita Falls. Professor Baer gave each one a pile of hundred dollars worth of information without batting an eye.

* * *

When The Ice Review representative at the Texas convention began jotting down notes at the convention was over the name of A. J. White appeared first on the list. To A. J. White of the Van Horn Creameries of San Antonio, Texas, secretary of the Texas Association of Ice Cream Manufacturers, much of the credit for the splendid convention of ice cream men of that state held in Galveston in November. Mr. White not only prepared a good program through his leadership and example he has put the might term "ice cream punch" into the convention. He gathered the "boys" from all sections of the state for a great conference, during which everyone received a great deal of good information and inspiration. Despite the inclement weather the last two days, the entertainment program was carried out as planned. It was splendid. Everyone had a good time. Hats off to A. J. White. The Texas folks exercised their usual judgment when they elected you secretary for next year.

* * *

Texans are placing the price question in a conspicuous place on their program. As a rule, Texas manufacturers are holding their own on the price of ice cream. There have been a few instances, but very few of price cutting to show the other fellow how much money you can make him lose. We heard of one who had a couple of competitors with the idea that they could put him out of business if they cut their price around 75 cents a gallon. That was fine. He raised his price 25 cents, gave the public a 14 per cent ice cream and sold more of it than he ever did before, and only two dealers. Just bear this tip in mind when the other fellow sends his salesmen out after your order.

* * *

Most of the folks attending the Galveston convention were well pleased with the reception from the Galveston convention were well pleased with the reception from the Galveston folk. Prominent among them was Mr. Kelsey of the Purity Ice Cream Co. Mr. Kelsey makes a pretty efficient entertainment committee. His work will long be remembered, and will answer several points in favor of Galveston when other cities are selected.

* * *

It is unfortunate that the people of Texas must submit to the refusal of their dairy and food commissioners to require the pasteurization of ice cream mixtures. They say that Commissioner Wm. Battle doesn't believe in pasteurization. Too bad he isn't commissioner of the state. People in that state seem to have acquired

of getting what they want and need from their officials, or getting officials who will give them what they need. There is no good excuse today for anyone to pretend ignorance of the need of pasteurization of milk products, if he can read and understand the English language, and has the good of the people at heart.

Professor Ridgeway said he wasn't a salesman, but he gave one of the best talks on salesmanship we have ever heard, and we have heard some of the best talks on salesmanship in this country. Professor Ridgeway's address characterized his ability to analyze the qualities of a good salesman, to explain them, and to put them on a chart in graphic form. If he can sell the idea of the Mistletoe Creameries on the idea of producing more and better milk as he has sold his idea of a salesman to the ice cream manufacturers of the San Antonio section will soon come into the picture for the quality of its milk.

Being in the police patrol was a rather dirty trick on a number of interested crap shooters. The police should be thankful that it was a joke. Names and addresses of chief participants will be found on page 1 of this issue.

Part of the program for next year's convention has been arranged. Professor Baer and the food and dairy commissioner of Texas, Dr. Wm. Battle, will discuss the question of pasteurization—maybe. Professor Baer has issued the challenge, and the honorable physician will have to do some tall explaining to the ice cream fellows if he doesn't accept. He will have to have a throat or a birthday or something.

Galveston newspapers did themselves proud in their publicity for the ice cream manufacturers during the convention. Space was given in generous portions of the convention and in its main points of interest were mentioned. Appreciation often goes unspoken. The ice cream manufacturers may not have said so, but they appreciated the publicity given them by the daily press of Galveston.

Texas Association Officers Honored.

One of the after-convention social affairs was the banquet given to the ice cream manufacturers who attended from Houston. The Houston Chronicle reported the banquet in their Sunday edition as follows:

After the aftermath of the convention of ice cream manufacturers at Galveston the early part of the week, visiting delegates who stopped over in Houston on their way home were entertained with a boat ride to the San Antonio Battleground on the Nicholas, and later dinner in their honor by J. J. Sullivan of the Houston Ice Cream Company, and W. H. Irvin of the Irvin Ice Cream Company.

S. Cage of the navigation commission, who accompanied the visitors, gave them a graphic description of the port facilities and the various enterprises along the waterway. During the boat ride, Mr. Irvin was entertained with a handsome smoking set.

At the dinner party Mr. Sullivan was the recipient of a handsome watch and chain as a token of esteem by the delegates, and their appreciation for his work as president of the association last year. Mr. and Mrs. Noadle presented Mrs. Sullivan with a basket of flowers. W. Workman, the new president of the Texas Ice Cream Makers Association, was given a box of cigars during the time he was summoning deep thoughts

EXHIBITS AT TEXAS CONVENTION

THE Galvez Hotel afforded splendid opportunities for ice cream supplymen to exhibit their wares during the Texas convention. A number of leading supply houses had splendid exhibits, the largest was that of the Blanke Mfg. Company of St. Louis, Mo., who had on exhibit an Elyria pasteurization unit, a 40 quart and an 80 quart U. S. Heavy Duty Freezer and some of their advertising literature. It was a splendid showing and the ice cream men appreciated it.

Other companies having exhibits were the Blanke-Baer Extract & Preserving Company of St. Louis, showing its black walnut, honey fruit salads, cold pack strawberries and the Blanke BBB vanilla extract.

The Southern Beverage Company of Galveston had its Triple X line of lemon, orange, strawberry, cherry, bourbonilla grape flavonilla, raspberry and pineapple flavors.

The Crown Fruit & Extract Company opened gallon cans of sliced peaches, strawberries, fig walnuts, pineapple, red cherry, orange, pineapple, walnut sundae, peach and tutti frutti. Needless to say when the boys were sampling ice cream they added a generous portion of Pete Miller's splendid fruits.

The Consolidated Wafer Company of Dallas exhibited, having its famous Cream-O-Cake Cone. Ice cream men were very much interested in Messrs. and Marcus' account of how the Cream-O-Cake Cone was made. A number of reprints of an article printed in Chicago Commerce on September 15, 1923 were distributed. This was indeed interesting. We hope to reproduce this in part in a later issue of The Ice Cream Review. Long Horn Paper tells us that it took 2 years to perfect the Cream-O-Cake Cone and he believes now the finest ice cream cone in America.

The Myles Salt Company is justly proud of the cone won at the St. Louis Centennial Exposition. This was shown together with different grades of cones produced by this company. The Myles Salt Company is located at New Orleans and has extensive refineries in Louisiana.

The Creamery Package Mfg. Company displayed a 100-quart freezer. It didn't remain their property long, however, for before the close of the first day it was sold to one of the delegates from Houston.

Another interesting exhibit was that of the Western Corporation of Morris, Ill. Their representative had one of their ice cream bar making machines on exhibit and at times had it in actual operation. This machine is one of the means of getting a profit on the five cent ice cream bar.

A Texas convention would not be complete without an exhibit of the "tall tubs." The Texas Bar Company of Houston had one of its "tall never-wet tubs" and the "circular cabinet" on display. The cabinet especially proved very popular. Possibly due to some degree to the quality of ice cream obtained. Jacob Noodelman was on the job.

CONNECTICUT SHORT COURSE IN FEBRUARY

The annual two weeks short course in ice cream making will be given at the Connecticut Agricultural College from February 25th to March 7th, 1924, at 1:30 P. M. Monday, February 25th. This course is especially arranged to meet the needs of men who had practical experience and desire a better understanding of the essential principles on which the production of ice cream depends. The course includes lectures and round table discussions of the mental principles of ice cream making with a large portion of each day devoted to the practical application of these principles in the manufacturing plant of the college.

These courses are open to all interested. The expense is slight, being only \$10.00 in addition to board and incidentals. Board averages about \$1.00 a day. The main incidentals are a white suit for use in the creamery and such books as one may wish to buy. Each person must bring his own bed linen.

For further information, or to enroll in a course, address Director of Short Courses, Connecticut Agricultural College, Storrs, Conn.

An Ideal Gelatine MIXER

This double jacketed "Harris" Copper Gelatine Mixer enables you to keep the melting mass at the correct temperature desired and the agitator produces just enough action to keep the mass uniformly in motion.

RIGIDLY built of heavy copper with every precaution toward sanitation.

Easily and quickly emptied and cleaned.

Write for prices on these standard mixers.

There's Something Alluring About Hudson's No. 52 Special

Down in the sunny valleys of old Mexico—where Spanish romantic legends still exist—where guitars and tambourines chant entrancing serenades to the fair Senoritas,—the world's best grade of vanilla beans are cultivated, grown and cured.

For nearly 40 years Hudson's vanilla flavoring and vanilla extracts have been made and refined from Mexican beans carefully selected by native experts.

Thus the name "Hudson" has long been synonymous of vanilla purity, strength and distinctive flavor. And its universal use by ice cream manufacturers places upon it an indelible stamp of dependable quality and economy.

If you are not using HUDSON'S NO. 52 SPECIAL we would like the opportunity of demonstrating its superior value.

Let us ship you a sample keg of No. 52 SPECIAL extract or a sample gallon of Hudson's Concentrated No. 52—Express or freight prepaid to your city. You may return same at our expense if not entirely satisfactory.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

West Virginia Association Holds Record Convention

Optimism Marks Thirteenth Annual Convention, Held at Parkersburg, November 19 and 20,
John Randolph Elected President—Visitors From Four States

ICE cream manufacturers of West Virginia met at Parkersburg, November 19 and 20 for what officials regard the best convention in the history of organization in that state's ice cream industry. It was the thirteenth annual convention of the Ice Cream Manufacturers' Association of West Virginia.

Attendance records were broken. Manufacturers attended from Ohio, Maryland and Kentucky. The program held much interest for the delegates, lively discussions marking the business sessions. It was the consensus of opinion that West Virginia face a splendid outlook for the advancement of the ice cream industry.

Several interesting talks featured the opening session, with President H. B. Haffner delivering the first address of the day.

In his annual message, President Haffner spoke in part as follows:

"One of the chief objects of the association is to business, but which no single manufacturer, no matter how large, could handle alone. There is the problem of the unfair practices of manufacturers' salesmen in allowing rebates and giving services not earned. One of the greatest evils to the industry is in the manufacturers permitting their salesmen to practice along this line, not only allowing rebates, but in making promises they cannot fulfill.

"It is no doubt true that 'he profits most who serves the best, but I don't think that this applies to the manufacturer who gives away his earnings in an effort to secure volume. Neither is it proper, or fair to the customer who pays his bills promptly, to allow one who always lags behind with his payments to discount his bills long after they are past due.

"I do not believe that ice cream manufacturers give enough consideration to cost accounting and sales price. Every manufacturer should increase his net worth each year, and to do this, his gross profits must exceed the cost of doing business. Capital will not remain in a business that does not produce a fair return on the business. You cannot cheat the arithmetic. Nothing from nothing leaves nothing, and multiplication does not alter the situation."

President Haffner took occasion to mention a few of the changes in the business in the state during the last year. One of the points brought out in this connection was the value of the associational work to the manufacturers. He said:

Conventions Necessary.

"Manufacturers have come to realize that it is necessary for the business to succeed, to hold national, state and zone meetings, not for the purpose of making agreements, but to learn each other's ideas, so as to

produce a good healthy product at the lowest cost possible."

In closing his address, President Haffner summed in a general way the accomplishments of the state association during the year, and what was expected way of accomplishment during the coming year expressed pleasure at the great interest which was taken in the work of the association, and the hope this would continue.

C. F. Jamison of Huntington, secretary and treasurer of the state association, in delivering the annual report said that the association was working to the end better conditions should prevail in the industry state, in regard to sanitary and other matters. The report was a concise review of the operations in the industry during the last year, and of interest to all of those present. The report of the directors, and the committee reports, were followed by a few short talks by representatives of ice cream supply

panies. The afternoon session was adjourned until six o'clock when the annual banquet was held.

He was followed by C. F. Jamison, of Huntington, who gave the report of the secretary and treasurer for the past year. S. Jordan, president of the West Virginia Association of Ice Cream Salesmen, spoke on general topics of interest.

"Merchandising Ideas for the Cleveland Show" was the subject of the address of H. W. Haffner, while C. G. Chappele spoke on the new appliances shown at the Cleveland Show. Registration, paying of dues and the distribution of badges took up the afternoon.

One Hundred Registered

About 100 were registered the first day from West Virginia and other states as far west as Missouri.

At 6 o'clock the first of the annual banquet was held at the Celler Hotel and was attended by all present.

Addresses were given by officials and the evening was enjoyably spent.

John H. Randolph of Parkersburg was elected president of the association at the final session. Other officers elected were: vice-president, G. W. Shetler, Wheeling, and C. F. Jamison of Huntington, secretary and treasurer.

The board of directors selected for the ensuing year is composed of: John H. Randolph, Parkersburg; C. F. Jamison, Huntington; S. B. Haffner, Elkins; J. Schmidt, Charleston; G. W. Shetler, Wheeling; P. D. Woods, Bluefield; W. H. Bonner, Morgantown; J. D. Swager, Clarksburg; and E. E. Livesay, Lewisburg.

Regional district directors chosen were: A. M. Johnson, St. Albans; M. M. Foster, Fairmont; F. A. Connolly, Pikeville, Kentucky; T. J. McCann, Wheeling; and A. S. Brady, Elkins.

New Officers and Directors

President, John H. Randolph, Parkersburg; vice-president, G. W. Shetler, Wheeling; secretary and treasurer, C. F. Jamison, Huntington.

Directors: S. B. Haffner, Elkins; J. Schmidt, Charleston; G. W. Shetler, Wheeling; P. D. Woods, Bluefield; W. H. Bonner, Morgantown; J. D. Swager, Clarksburg, and E. E. Livesay, Lewisburg, and the officers.

Regional Directors: A. M. Johnson, St. Albans; M. M. Foster, Fairmont; F. A. Connolly, Pikeville, Ky.; T. J. McCann, Wheeling, and A. S. Brady, Elkins.

Next Convention City, Clarksburg.

BAIRD

SAVE MONEY and solve your delivery problems by standardizing on Baird Refrigerator Bodies for the coming season. Throughout the hottest days they maintain a temperature of three degrees below zero. Soft cream actually hardens in them. Their perfect insulation cuts ice consumption several thousand pounds a week. They can be loaded in the afternoon for the next day's deliveries. All compartments being easily accessible from the sidewalk, the operator serves more customers per hour. No brine is dripped on the chassis or on the street. There is nothing to get out of order. Every part of the body is easily and quickly cleaned by flushing with a hose. The ice cream cans are dry and clean. The operator of the truck can keep clean and presentable in appearance. Your Baird Refrigerator Bodies prove to your customers and the public that your product is handled in a clean, scientific and hygienic manner.

WILLIAM F. BAIRD COMPANY

OFFICE: 401 Chamber of Commerce, BOSTON, MASS. FACTORY: WINCHESTER, MASS.

Clarksburg Gets Convention.

Clarksburg was chosen as the next convention place for the association. Votes of thanks were extended the local entertainment committee for their arrangements for the visiting delegates and a vote of thanks also was extended the retiring president, S. B. Haffner of Elkins, for his work for the association during the past year.

The new president of the association, John H. Randolph, is general manager of the Imperial Ice Cream Company of Parkersburg and has been active in promoting the interests of the West Virginia association.

Election of officers, directors and the choosing of a board of directors followed an executive session at 1:30 o'clock Tuesday afternoon, November 20. The meeting continued all afternoon and many things of interest to the ice cream industry were discussed.

Reports of district chairmen were heard in the morning and in each case the chairman stated that the consumption of ice cream is growing daily and that in many cases it would be necessary to increase the producing capacity of the plants.

At ten o'clock the morning of the last day, the manufacturers held a round table discussion. Production problems and sanitary conditions were the two principal subjects discussed. J. J. Schmidt, general manager of the Cline Ice Cream Company of Charleston, led the discussion on credit information while J. T. Swager, vice-president of Clarksburg, spoke on the development of the industry.

John H. Randolph, the newly elected president of the association, spoke on the ice cream industry and abuses in the trade. Following these talks the district chairmen gave their reports.

SUMMARY OF WEST VIRGINIA CONVENTION

There were between 100 and 125 delegates registered. It was the largest and best attendance since the organization of the association.

* * *

Much interest was shown in the discussions on topics shown by the members.

* * *

By-laws were amended, new ideas and methods of caring and handling conventions were introduced.

* * *

Committee Appointments.

Resolutions—J. H. Randolph, Parkersburg; J. Cline, Charleston; M. M. Foster, Fairmont.

Nominations—J. Spates Brady, Elkins; J. J. Schmidt, Charleston; J. T. Swager, Clarksburg.

Auditing—E. E. Livesay, Lewisburg; E. K. Jones, Hinton; R. C. Cook, Huntington.

Program and Entertainment—J. T. Swager, Clarksburg; Kenneth Haugh, Grafton; M. M. Foster, Fairmont.

Director to the National Association of Ice Cream Manufacturers representing the State Association—W. Shetler, Wheeling.

Development of the Ice Cream Industry of West Virginia

IT IS seldom that the ice cream industry is given such proper appreciation as that shown in an editorial appearing in the November 21 issue of *The West Virginian*, a daily newspaper issued at Fairmont, W. Va. The editorial was published at the close of the convention of the Ice Cream Manufacturers' Association of West Virginia.

It is quoted in full so that our readers can see that some newspaper editors can understand this industry's importance in human affairs and will go to the effort to tell the public about the value of America's greatest food dessert and of the high ideals followed by its manufacturers:

"The Ice Cream Manufacturers' Association of West Virginia elected a president, chose a board of directors, and named five regional district directors at a meeting held in Parkersburg this week. The ice cream business in West Virginia has reached such proportions that it must be officered and managed as expertly and completely as any other established manufactured product generally patronized by the public.

"It is astounding to review the development of this business and to observe the tremendous amount of business done in the present day. Ice cream has become one of the most important items among all food products and the people eat an unbelievable amount of it. From a special dessert served on special occasions in warm weather, the frozen dainty has become the most popular refreshment in the world, and it is eaten by many twice a day at meals regularly, while over the soda counter thousands of gallons are dished up between lunch and dinner, and dinner and bedtime.

"Ice cream has a universal appeal. The variety of flavor and combination with fruit and nuts has a scope that pleases every one's taste somewhere along the line. Children may have it, boys and girls prefer it to anything else, grown-ups like it immensely, and grandparents eat it with no fear of indigestion. In the hospital and nursery the plainer ice creams are lavishly served, while at the most elaborate and

extravagant dinner parties, ice cream in fanciful masade, stuffed with richness, is the crowning feature of the menu.

"No wonder the ice cream business of West Virginia needs a board of management similar to that of a corporation or a prosperous railroad company. One of the first things this newly elected body should bear in mind. It is peculiarly responsible to the people by reason of the nature of the product it governs. Nothing can be so beneficial as a product, nor can anything be more harmful or dangerous. Pure milk and sanitary conditions are imperative factors in the making of ice cream, and the standard maintained in this business should ever be unquestionable. It is no responsibility to offer to the public a product so univocally used by invalids and children, as well as the average individual, and keep it pure, healthy and satisfying."

President Randolph's Comments.

John Randolph, head of the Imperial Ice Cream Company and new president of the Ice Cream Manufacturers' Association of West Virginia, was quick to show his appreciation of himself and his association for this constructive editorial.

Mr. Randolph, who is head of one of the large ice cream manufacturing concerns in the world, an organization ranked among the five greatest of its kind in America, wrote as follows to W. J. Weigel, editor of *The West Virginian*:

"I wish to take this opportunity of expressing to you my appreciation and the appreciation of the industry of your editorial, which I consider is a masterpiece in which the ice cream industry should stand for in the state of West Virginia and also in the United States or wherever ice cream is made and sold.

The ice cream industry has been looked upon by the majority of the people as a sort of "peanut" business. I assure you that it will be my policy as long as I am president of the West Virginia Ice Cream Manufacturers' Association, and it will be the policy of the company which I represent, to endeavor to put the ice cream industry where it belongs so that it will compare favorably with other industries and manufacturing concerns.

In my opinion, the only way that this can be accomplished is for every manufacturer of ice cream to endeavor at all times to make the very best possible ice cream that can be made, and that only a reasonable profit should be made on his product, and that he should endeavor at all times to see that every ingredient that goes into the making of ice cream be of the very best quality, insisting at all times that his plant shall be kept in the most sanitary condition and that the utmost care shall at all times be taken to the product so that it may reach the consumer in the very best possible condition.

"I am taking the privilege of forwarding this editorial to you of yours to *The Ice Cream Review*, which is the official publication of the ice cream manufacturers, as I feel that an editorial of this kind should be read by every ice cream manufacturer, and if possible it should also be read by every ice cream consumer.

Thanking you again for this editorial, I beg to remain,

Very truly yours,

JOHN RANDOLPH,
General Manager, Treasurer,
Imperial Ice Cream Company

NORTH DAKOTA CONVENTION IN MARCH

The annual convention of the North Dakota Ice Cream Manufacturers' Association will be held at Grand Forks on March 9, 1924, according to announcement recently made by Secretary Harry Geist of Grand Forks. The convention will be held in connection with the meeting of the North Dakota Dairymen's Association. Officials are looking forward to a lively convention. Work on the program will begin in the near future, we are assured. Officials believe the convention will be well attended and men in the trade who have followed the fortunes of the North Dakota Association know that they will have a lively worthwhile affair when they meet for the convention.

The Association of Ice Cream Manufacturers of New York State Holds Spirited Convention

By J. C. MARQUARDT

THE New York association opened its sixteenth annual convention Wednesday, December 5th. After a brief review of the official reports, President Vernon F. Hovey presented his address which was an index to the two day sessions.

PRESIDENT'S ADDRESS.

By Vernon F. Hovey.

I believe and hope that the past year has been one of progress and development for our association.

An association is always justified where there is need of co-operation, and we have had evidence, this past year, that this association serves a real purpose.

As you all know, an attempt was made, last winter, to change the New York state law on ice cream

upon and writing to their own assemblymen andators.

The state department has found difficulty in the enforcement of the present law, due to its wording, at one time it seemed that it might be possible to pass an amendment that would meet the objections of the department to our present law, and yet, which would not in any way be objectionable to any of our members. We were unable to introduce the amendment because of the opposition of Senator Straus, chairman of the senate agricultural committee.

Because of the difficulty of enforcing the present law, and because of the attitude of Mr. Salthe, chief of the food division of the department of health of New York City, I fear that we will, this winter, be confronted with more proposed legislation effecting the industry. I think we should make every effort to confer with the commissioner of farms and markets, Mr. Salthe, before the next legislature convenes, and have a right to expect full consideration of our views in connection with any and all matters effecting the industry. We must be wide awake, ready to look after our interests, with every prospect that our efforts will be successful if our members give the individual effort and support they can give so easily.

It is particularly fitting that an officer of your association should talk about co-operation. It would seem that our manufacturers could operate with less worry and with greater profit if we could come to a realization of the fact that it doesn't pay to put something over on a competitor. During the past year or two, we have had offered all sorts of chocolate novelties, or other novelties created because of the success that, for a time at least, attended the sale of Eskimo Pies. Many of these novelties have had little merit, but have been taken on by certain manufacturers feeling that they could, by the getting of exclusive rights, put something over on competitors. This has usually resulted in loss to the manufacturer who put out the novelty, and has been attended with little success in hurting the other fellow.

It would seem good business that we should get together with our competitors, and discuss the advisability of putting out novelties of any sort, and then working together on anything that seems worth while. The growth of unwarranted service has been another indication of a lack of co-operation. This has caused many of us to do business in an uneconomic way, which is contrary to the good of the public and ourselves. Errors in judgment are usually cared for in time, as is evidenced by bankruptcies of numerous ice cream companies through the state, during the past year.

If a two-track railroad is serving every possible corner of a certain territory, it would be uneconomic and unwise for someone else to build a parallel railroad. It is no less unwise to build new ice cream plants and distributing stations in cities and territories that already have manufacturing capacity for much more ice cream than can be consumed.

Where men go into business or expand business without making a survey of the field, to know that there is room for them, it is only natural to expect a calamity and it appears in many territories that the price of ice cream judgment has been paid by quite a few during the past year, and is still being paid by some.

Unwise and unfair competition usually comes from manufacturers who are uninformed, consequently I

standards. An attempt was made to require a flat standard with no allowance for a reduction in fat, due to the addition of fruit and fruit juices. This was absolutely wrong, in principle, and we accordingly appeared before the assembly committee to oppose the bill. Had our members made a greater effort, I am confident the bill could have been defeated in the assembly, however, it did actually pass the assembly, by a very small margin.

The next move was to oppose the bill before the senate committee, and here we were quite fortunate, in that the bill was held in the committee until two days before the adjournment of the legislature, and finally died in general orders.

I did as much work as I could, personally, in opposing the bill, but I want to tell you gentlemen that what counted most was the word received by the legislators from their constituents back home. I had plenty of evidence that the legislators were influenced by the letters written to them by our members, and in supporting or opposing measures that may in the future be introduced in our state legislature, I am confident that our success or failure will depend almost entirely upon the support given by our individual members, in calling

120-qt. motor - driven
EMERY - THOMPSON
horizontal brine freezer
with automatic batch
regulator valve. Rais-
ing hand lever at for-
ward end of cylinder
permits instant exami-
nation of batch.

The Thoroughbred of Its Kind

The New *EMERY-THOMPSON BRINE FREEZER* is the *thoroughbred of its kind*.

It embodies such improvements as automatic batch control valve; open and full space for brine circulation through the base of the vertical freezer and through the entire back of the horizontal freezers; true nickel silver cylinders on which scrapers run smoothly; and other fundamental improvements which have made *EMERY-THOMPSON Brine Freezers* the preferred method of ice cream manufacture.

The hinging of the heads; full bronze bushings; cut steel gears; and the elimination of soldered ends are features so important that no manufacturer can afford to overlook them.

EMERY-THOMPSON brine circulating backs alone add about 10% to their refrigerating qualities. And the *EMERY-THOMPSON* automatic batch control valve which accurately measures each batch will *save*

a big yearly cream loss through overflowing reservoirs and uneven overruns.

Why pay experienced men high wages and limit their production with slow, inferior freezers? The *EMERY-THOMPSON* in your plant *will save its cost* many times over in *reduced cost-per-gallon*, better cream, and bigger sales. It will pay you to ask us for prices and further details.

UR regulation brine tank, shown below, is intended for freezers of not over 40 qt capacity. It is economical in operation, sufficient brine being cooled for the freezer at the lowest possible cost. 1" open belled centrifugal pump gives an even, steady flow. Furnished with flexible closed couplings.

RYTHING FOR THE HANDLING

OF MILK AND ITS PRODUCTS"

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

been greatly interested in the possibility that our members might adopt a system of uniform accounting. Bankruptcy seldom comes to a manufacturer who has a good accounting system, and there is no doubt that the industry in this state, will have made a great step forward if we can get a comparison of costs which will point out to us, individually, the costly, inefficient, uneconomic and foolish things that we are doing.

The cost accounting committee took seriously the vote and what was really a pledge on the part of our members, to adopt and use a method of getting costs on a uniform basis. Taking our members at their word, this committee has worked hard in the preparation of suggestions which should give us the result that we want, and their report will be given to you on Thursday afternoon.

I want to urge all of you to show your appreciation of the work done by attendance at the Thursday afternoon session, and please come with an open mind, ready to give your assistance in the accomplishment of a work that seems of paramount importance.

I would like to say just a word regarding the national association. The association has always had a vast amount of protective work to do, and the work has been well done. We would not have had progress but for the co-operative effort that has been made possible through our state and national associations, all of which have been more than justified by the good they have done. In spite of all of this, there is, at times, some criticism and a demand that real constructive work be done. There is a desire to have the national association serve the industry in every way possible, and I am accordingly pleased to report to you that the board of directors of the national association appropriated a substantial sum to be used in the development of uniform cost finding methods. I want to say to you

that I am quite sure this work will not, in any conflict with what the accounting committee of our state organization has to offer you.

The national association is also considering the visibility of a national advertising campaign, very competent committee will in proper time give recommendations. It has been our thought that ice cream manufacturers throughout the United States should agree upon a slogan.

A slogan committee was appointed, with Mr. Ton as chairman, and it is now the thought that the national association will probably appropriate a fair amount of money to be given as a prize for the best slogan submitted, and that the suggestion will be made that manufacturers in each city or community also prizes for the best slogan submitted, it being thought that this scheme gives an opportunity for a vast amount of good advertising, all of which will be the ultimate slogan more valuable when adopted.

Active work is also being done by the committee on standards, and the committee on standardization of equipment. I mention these things so that you will know that real work is being done.

As your retiring president, it will give me satisfaction if I can feel that constructive work has been done by the association. If the work that has been done results in the adoption of an efficient system, adopted by nearly every manufacturer, a uniformity of methods, which permit comparisons, I shall feel that worth while work has been done.

I have appreciated, very sincerely, the honor of being your president, during the past year, and in closing, I want to thank the committee members, and other members for their whole-hearted support. The New York State Association can be of service to everyone, and deserves our whole-hearted support.

* * *

The present day interest in research was demonstrated at the completion of the reading of a paper on the subject of "Research and Experimental Work in Ice Cream Making," prepared by A. C. Dahlberg, New York Experiment Station. The association and the station have worked together in the solution of ice cream problems and the establishment of research as related to the modern rapidly growing ice cream industry. The paper included a resume of the work done on the greenish-black discoloration of chocolate ice cream, a report on formula comparisons as conducted at the station. The microscopic study of ice cream as explained and illustrated with photo micrographs demonstrated plainly the high type of research related to the ice cream industry done at the New York Experiment Station.

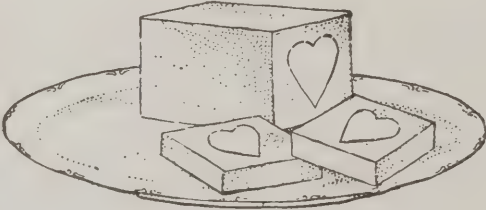

Prof. W. W. Fiske, Cornell University, after injecting a happy attitude into his audience succeeded in stating clearly the value of ice cream as a food. His discussion pointed out the advisability of a good selection of materials for the mix. He was the first to present the thought of a "Bacterial Standard for Ice Cream."

The discussion of Arthur Lazarus, New York association, to the balanced program. Mr. Lazarus came before the association with a volume of information and experience on the subject of budgeting. The peak of his talk

reached in the reference to concerns without a budgeting system, who are daily realizing that their success was only a dream.

At this stage of the session the members enjoyed a brief recess to prepare for the annual dinner and dance. Both occasions showed clearly that the New York manufacturers were veteran entertainers. Not only did they select excellent entertainers; some of the members demonstrated their fondness and expertness at song and dance.

C. F. Eurich, New York, discussed "Branch Plant Operations." Pointing out the folly of invading of occupied territory, and a general discussion of business ethics were high points in Mr. Eurich's discussion.

Karl M. Sayles, Binghamton, in making "Profitable Comparisons" graphically illustrated, developed an interest account of his operations. The completeness, and low cost of Mr. Sayles's method proved to be valuable as a guide for checking up work for plant managers.

"Unwise Policies" as presented by S. T. Nivling, Rochester, included an outline of sound business principles, and a discussion of unwise moves in the ice cream business. Business ethics references characterized the material presented by Mr. Nivling, and C. F. Eurich. The fact that present day business men at least think of a code of ethics apparently was a source for some thought for those present.

Visit Pfaudler Plant.

The members enjoyed a visit to the Pfaudler plant. The size of the plant, the numerous tanks on the floor, and the operation of manufacture proved of interest. The manufacturing process was convincing that the durability of glass lined equipment cannot be questioned. The numerous steps in the manufacture of perfect tanks

also gave the visitors an opportunity to understand justification of glass lined tank prices.

Upon leaving the Pfaudler plant, the Taylor ment Company was visited. The reception the very cordial; the details of operation too delicate to discuss. We learned that Tycos employs 1,100 people at the Rochester plant. Upon leaving the plant visitors were presented with a thermometer with instructions to determine their temperature as a guide to the reaction of their temperature to the association with many Tycosettes.

Upon leaving the Tycos some of the members to see Little Nellie Kelly; others arranged for the departure. We cannot account for them all, but the majority returned to the hotel for the members' session. Those that survived the committee reports, elected directors, unfinished business, and family censures enjoyed a Theater Party, Thursday evening arranged for the Rochester, Canandaigua, and Geneva members.

National Homogenizer

The Machine with the Revolving Head

The National Homogenizer is manufactured and backed by a million dollar corporation, builders of precision machinery for fifty years. It is the only machine that bears a perpetual guarantee.

Better Results!

In the history of the Dairy Industry there is occasionally brought on the market a new or improved machine which outdistances competition. The National Homogenizer, as exhibited at the National Dairy Show and the Ice Cream Convention at Cleveland, is such a machine and was pronounced by those who saw it as a triumph of engineering.

Better results, with less danger of tie-up because of worn out parts, can be obtained—a more satisfactory emulsion, creamier ice cream, etc.—by using the National Homogenizer and there are many good reasons why.

Chief among these is the revolving head which adds rolling and grinding to pressure. This makes clogging impossible; prevents the formation of radial grooves; and, with the three

graduated steps, insures a more perfect reduction of globules.

We guarantee this machine to produce a more perfect emulsion under less pressure and with less power consumption, than any other machine now on the market! Get all the facts. We shall be glad to send you a catalog and full information.

Gelatine That Is Dependable

The one ingredient you should not take chances with in your product is gelatine. It must be good!

When you are using a gelatine that easily passes the pure food requirements of every state in the Union you know that it is safe.

When gelatine is manufactured from careful selection of the finest raw materials and processed with the most painstaking care, you can be sure it is safe. Its high viscosity, its unequalled purity and clarity mean uniformly good results in your production.

That's Atlantic super-clarified Gelatine. And although the manufacturing cost of "Atlantic" is slightly higher, it sells for a lower price than other gelatines of corresponding grade.

And you can depend on "Atlantic."

Iowa Association Holds Good Convention

Able Speeches Mark Fourteenth Gathering at Mason City Last Month.
Memorial Services Held for Col. Brewer, Former President

MEMBERS of The Association of Ice Cream Manufacturers of Iowa were getting ready for the New Year with light hearts, following the fourteenth annual convention of that body at Mason City, December 10, 11 and 12. Hotel Hanford was the scene of this convention, which is declared by officials to have been one of the best on record for that historic association. A lot of manufacturing problems were worked out for many of the delegates.

Secretary Crowley's convention program went through in such manner as to meet his fondest expectations. Members found the discussions very interesting, both in the ground they covered and in the way they were handled.

The Poodle Dogs played their usual active part in the entertainment of the manufacturers.

Among outstanding features of the program, aside from the wise counseling of the officers, were the addresses of E. Elmo Martin, speaking on "Confidence in Business;" Prof. M. Mortensen, Iowa State College, speaking on general production problems of common and uncommon types; Dr. Thos. B. Downey, speaking on "Edible Gelatine," and F. H. Clausen, whose subject was "Cost of Furnishing Packing Service to City Consumers."

Registration of delegates took up all of the first morning of the convention. The opening session was held the following day, when President Hutchinson addressed the convention with the president's annual message.

The secretary-treasurer then made his report.

The local committee, with the assistance of the Poodle Dogs, were hosts to the delegates at a smoker the first evening, held at the chamber of commerce.

Memorial Services to Col. Brewer.

Drama in its saddest form entered into convention proceedings at the close of the program on the second day, when the manufacturers and the supplymen touched the chords of memory for a sad, silent tribute to one of their own who made the supreme sacrifice for his country in the late war. A stirring tribute was paid at memorial services to Col. Guy S. Brewer, former president of The Association of Ice Cream Manufacturers of Iowa, who gave his life in France.

J. E. Enright, president of the Poodle Dogs, in conducting the services, paid the respects of the Iowa ice cream men to Colonel Brewer in an impressive speech. In part, he spoke as follows:

"By invitation of the honorable president, Chas. S. Hutchinson, in behalf of The Association of Ice Cream Manufacturers of Iowa, we, the associate members, are here congregated to participate and mingle our sentiments on this sorrowful occasion, a memorial service to our lamented past-president, Colonel Guy S. Brewer.

"Sincerely do we thank you, Mr. President, for the invi-

tation, and eagerly do we respond to the call. The association should hold such a service is most appropriate and eminently fitting.

"With sad hearts and bowed heads we stand in the presence of an enormous and over-powering loss, for one who has faithfully and lovingly performed the duty that was his to do in this world has gone from our midst in 'great beyond,' that 'undiscovered country from whose no traveler returns,' and his going leaves almost a void, not only in the hearts of those who were nearest and dearest to him but a void in the entire community, that at large; in the church and assemblies and fraternal organizations which prized his membership; in the American Legion, he helped to organize, promote and support; in the National Guards, which was the apple of his eye, and which owed much to his untiring effort, particularly in this state, for growth and strength. Yea, that void reaches, I would say, into the very seat of our government at Washington, in the offices of the Department of War and the Department of Justice, whose appointee and trusted servant he was.

"Last, but in no lesser measure, is this void felt in our very association which knew him long in fellow-membership and greeted so often in meeting with his gracious presence, where every individual member knew and loved him, and where he was known and loved as he was wont to be known and called—just Guy.

"And now he is gone—no longer with us in the flesh, but his spirit still remains with us.

"As the wail of lamentation rises up I would lend my small voice to the swelling sound, for it was to me to know him very well.

"If I may digress for a moment I would recall the early years of the life of this association of which I was a goodly number in this audience, a vivid recollection. The problems and handicaps were altogether prevalent and too numerous to mention, the then sparse membership, but optimism reigned supreme in that group, that hardy band of pioneers of the industry in this state, and trials that then beset were met and defeated.

"During those early, struggling days, the Iowa association was sustained by the wise counsel and stirring leadership of Guy S. Brewer.

Whether in office or out of office, him it was shoulder to shoulder with his associates in the accomplishment of fixed purposes, and always to the mutual good of all."

Officers of the association were re-elected at a business meeting on the afternoon of the last day of the convention. This was followed by an inspection of the plant of the Northern Sugar Corporation.

CRANE-OHIO ICE CREAM CO. DECLARED SOLVENT.

Judge Duncan has refused to appoint a receiver for the Crane-Ohio Ice Cream Co., Columbus, Ohio, thereby upholding the contention of the management of the company that it is solvent and in no danger of a financial shipwreck. The court was told that assets of the company are now \$2,200,000, subject to small obligations, and that in addition the dividends to be paid in January have been earned and are awaiting distribution to the preferred stockholders.

The defense argued that there are 2,600 stockholders in the concern and that only one was making the receivership application.

Automatic Refrigeration

REFRIGO for the Ice Cream Cabinet

HIGH SPOTS

Fits any cabinet
Completely automatic
Capacity, equals 200 pounds ice per day
Operated by $\frac{1}{4}$ H. P. motor
Installed beside cabinet, or in basement
Ammonia; Sanitary; Economical
Saves 9 to 16 cents per gallon
Maintains uniform temperature
Eliminates salt and ice
Soon pays for itself
Patented leak-proof seal
Cost of operation nominal
An investment, not an expense

The Last Word

REFRIGO is the last word in the refrigeration of ice cream cabinets. It refrigerates as dependably as the large commercial ammonia machines, but is without their size or expense.

REFRIGO is the machine every ice cream manufacturer and dealer needs. It saves him big money.

President's Address to Iowa Association

By C. S. HUTCHINSON

WE have reached the end of another voyage and have arrived safely in the port of this, our fourteenth annual convention. Here, we will spend three days reconstructing our rigging, repairing the rents in our sail, and, learning from and giving council to one another; so that, when we leave this friendly haven and turn our helm toward the unknown year, we will be better equipped to meet the requisites of the future journey, and, will be able to bring our ship back in better condition next year.

Each succeeding year brings new faces in our midst. To these we give a hearty welcome and an urgent invi-

we would like to hear. Take your part in the session. Your advice is as valuable as your presence. Make it your firm resolution that this convention not close without your having entered at least one discussion. For after all, the information which is of most value to all of us is the experience of our fellow manufacturer. The interchange of ideas is the principle of this association. So, add your bit.

This convention is your opportunity to be with your competitor, make it a point to further your friendship with him during the convention, and continue that friendship throughout the year. Your competitor should be your best business friend. You may not will have differences of opinion but let us learn from the broad view in our controversies. Come meet what we think is half way with him, and, we will generally meet at the half way point. If we make an unfriendly move, remember that he can do the same. There is a boomerang in all our steps. War is a waste and always leaves its scars.

Within a few weeks, Uncle Sam will again ask us that we are still paying for war. The scars of merchandising war can be plainly seen in the products of every industry. There is no need for us to participate in such a war. Let us establish and espouse the principles of this association and develop such a pride in our membership that to engage in an unfair practice would be odious to us.

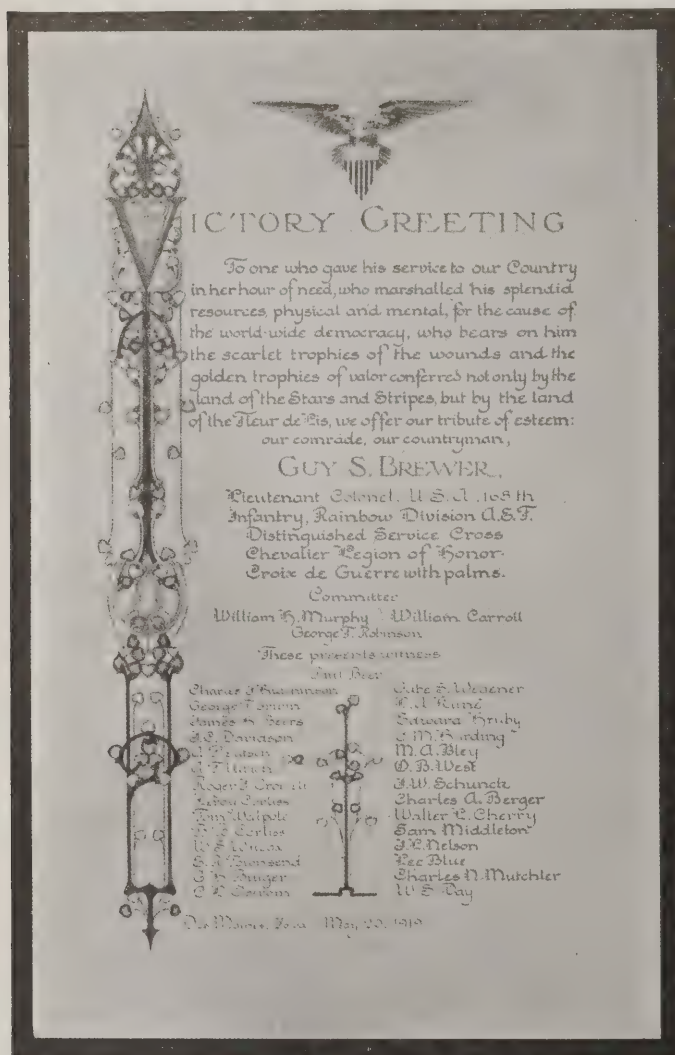

We have our state divided into groups. Meetings of these groups should be held at least six times a year, or more frequent if necessary. Set concrete dates, put aside one day in sixty as a day to get together with your business friends. You will find it to look forward to these meetings and they will make an event in your business which you could not dispense with.

Change in Methods Near.

A change in our methods of distribution to the retailing trade is confronting us. Whether this change is general will largely depend on the results of the next meeting. Some of our members have already formed the express company and are delivering their products in their own vehicles to the trade throughout the state. Their experience in this service will be valuable to us. It will help us decide whether we can do the work of the express company for less money and as good all year round service.

It has been said that our railroad transportation system is the backbone of the nation. Is that true? If it be so, then due consideration should be given to this system by our industry before changing our methods. Will country delivery mean eventually the failure of cabinets and packing service to our present retailing trade? Do we want to relieve the dealer of the burden of reicing and can we perform this service cheaper than he can? This matter should be thoroughly considered before undertaking truck delivery to the retailing trade.

The new auto-matic refrigerated cabinet is a solution in our service problem. Are we going to make such installations, or, are our dealers going to chase their own plant, or, are these cabinets going to effect a large enough saving to be used? It is our purpose to pass on the relative merits of machinery. It is our duty to discuss methods which affect the general trend of our business. The refrigerated cabinet problem is one for which there is very little experience.

Iowa Association's Memorial Tablet to Col. Brewer.

tation to take full part in our meeting. To our member manufacturers who have been unable to attend, we send our heartfelt regrets. To the few manufacturers who have failed to see the need of this association and these meetings we send our sympathy and trust that they will soon be shown the error in their policies. Those of us to whom this is the completion of their thirteenth trip, can truthfully testify that from these councils, each year they have returned better fit to make the voyage.

We have much work before us, and though our stay here is short, we have sufficient time allotted to adequately discuss the most vital and interesting phases of our industry. Our secretary has carefully arranged a program, but at all times he wants you to feel that this is your program and you are the one from whom

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

New!

EMERY THOMPSON

Ice Cream Freezers

About 40 seconds and the frozen cream has been emptied through the big slide gate into waiting cans. That's speedy emptying!

Shut the gate. There's a batch waiting above. It's the correct amount—having been measured "to the drop" by new automatic batch measuring regulator. Open the 4 inch valve and the freezing cylinder is again loaded in about 12 seconds. See that big fruit hopper above the cream inlet valve? No spilling nor waiting for sluggish fruits, flavors or syrups to trickle through a narrow opening! Dump 'em in! And you will note one of the breather tubes, running out at an angle. These tubes permit free air circulation while the batch is being frozen. They mean *full yield*. They facilitate quick emptying.

Not a single basic idea has been changed—but these improvements added. Investigate. Will you consider these new features if we send you a catalog?

to influence us, as the method has not been in use very extensively nor for a long period of time. Though it is our natural inclination to shy from the untried, these refrigerated cabinets are interesting and worthy of consideration.

Then we have many forms and sizes of packaged ice cream that are taking their place in the field. Does the consuming public want ice cream put up in a package at the plant? To be sure it has a more sanitary appearance and is a good advertising medium but does it put our products in the hands of the consuming public at the lowest possible price?

We must bear in mind that at the initial outset these new phases add cost to our product. Whether or not they will effect an eventual saving is the problem. In considering added costs we should bear in mind the following economic principle, "that no cost should be added to any manufactured commodity that does not increase its sale nor add to its general usefulness."

Packing Service Causes Alarm.

Manufacturers throughout the country who give packing service are becoming greatly alarmed at the ever increasing cost of this service which at present bids fair to equal the ingredients cost. Is our present system wrong? Would it not be better to make a reduced price on ice cream and a flat weekly charge per hole for packing service? This would put the problem of increased sales per hole in the dealer's hands. He naturally would push his sales more to reduce his price and would eliminate extra flavors which he now carries at the manufacturers expense.

Under the present method the delivery cost varies with the sales per hole, and, can be five times, or more, greater for one customer than another. The subject of packing service has been placed on our program and

I am sure all of us will give the speaker our most careful attention.

The state legislature is now in session on the w of code revision. We should keep an active eye on w transpires in that session. Our legislative committee should co-operate with the manufacturers association of Iowa in their work against unfavorable legislation. The new motor transportation law became effective and are anxious that a discussion take place at this meeting the past year. A large number of our members operating under the apparent scope of this law, which will enable us to better understand this measure and to know its points which are unfavorable to industry. Our legislative committee stands ready to work for us for any changes which may be desired.

We should again consider the adoption of a uniform cost accounting system. We can all benefit by using such a system. The national association has an excellent plan worked out. This could be used by all members of our association, or we could work out a plan peculiar to our own state conditions. Our association could maintain statistics on various costs, and a system of informing members of comparative costs could be inaugurated. A compilation of statistics on costs would help us reduce our electric power rate, cost of dairy products, fuel, labor and in fact, all our expenses. We should give this subject consideration and appoint a committee to draft a plan of uniform cost accounting.

Our present method of reporting credits has proved itself inadequate both in its scope and in the failure of members to report their bad credit risks. There is no doubt but what great stress should be laid on this matter. Credit losses are not a necessity. They are a pest, gnawing at the heart of our commercial structure. We should treat them as a pest and exterminate them as we would a fastly spreading disease. We are within the scope of our organization in taking drastic action to eliminate these losses.

The public is with us in this matter; for, by elimination of this uncalled for expense, we are putting our products in their hands at a less cost. Force a weekly collection of all our accounts. Let us use our association as a means to this end and establish a credit department in which every member has an active interest.

We are not bankers, nor are we receiving interest on our accounts. Why should our dealers be permitted to expect us to finance them. Our goods are sold to them and, generally for cash, before their bill is due. Ice cream has the quickest turn over of any merchandise that a dealer carries. It is not like goods on his shelves. We pay out money to collection agencies, yet this association could save us many times more every year than any collection agency. We need team work to put our accounts in such shape that our dealers realize they are due every week and must be paid. It is safe to say that the ice cream manufacturers of Iowa could be saved much as \$20,000.00 net every year by the establishment of a well organized credit department in our association. Let this matter have some serious thought. The monetary losses are alone worth saving, not counting the loss of time and effort in making some of our collections that are not lost, but might as well have been, due to the cost of collecting.

Advertising Urged.

Galloneage reports for the past year show, that due to unfavorable weather conditions, sales have fallen considerably. Therefore, special attention should be given at this convention to methods for a general increase in sales. Let us form advertising plans wherein we will make the consuming public actually want more ice cream.

every man, woman and child in your community increased their consumption of our products as much as only one dish a week, think what effect it would have on your sales.

Make the public realize the nutritive value and wholesomeness of ice cream as a dessert. Sell our dealers on the idea of how much their ice cream business affects sales in other departments of their store. Furthermore, let us effect measures which will place our products in the consuming public's hands at a less price. This is a phase in which all of us will have unity of purpose to the greater advancement of our industry.

In conclusion I wish to tell you how gratifying the

registration has been; to thank our secretary for work in the organization of this convention; and, to press on you the fact that the Association of Ice Cream Manufacturers of Iowa is every year becoming greater and more beneficial to its members. Let us make our meetings truly constructive so we may have greater prosperity during the coming year. And, when Wednesday night we turn our helm out to sea for another journey, let us remember the sound advice of good-fellowship which has prevailed in these meetings so that if per chance our paths cross during the year we may be better prepared to work out our difficulties in harmony and accord.

Secretary's Report

By P. W. CROWLEY

FOLLOWING your annual meeting, held in Des Moines in January, the board of directors instructed the secretary to hold group meetings and give attention to such matters as would be in keeping with the policies set forth by action of the general meeting.

The legislative committee called your attention to the three matters which were before the legislature at that time, among them being the trucking transportation

P. W. CROWLEY.

subject and the matter of the consolidation of various commissions. The Motor Vehicle Transportation Law placed the matter of trucking under the supervision of the State Railroad Commission. We are glad that during this convention a representative of the Railroad Commission will be present to interpret to us insofar as it is practical the Motor Transportation Act. The legislature established a department of agriculture, which embraces along with certain other departments, the department formerly known as the State Dairy and Food Commissioner. We are glad to advise that the establishment of this new department in no way interfered with the service which the former department was rendering the ice cream industry. In fact, I believe I am quite safe in saying that the ice cream manufacturers are receiving more service from the department of agriculture than they received from the former dairy and food commission. I believe that every one of you will testify that more of your packers have been coming back to you this year more promptly than heretofore, and also that you have had less complaint to offer in regard to your competitors not keeping their product up to standard. These are the matters which are of interest to the ice cream manufacturers, and which have been given attention by the department of agriculture.

In addition to these matters bills were introduced in the legislature covering the subjects of "Compulsory Pasteurization of all Dairy Products," "Filled Milk," and "No-Fund Checks."

The compulsory pasteurization bill failed of passage. The filled milk bill seemed for a time might have some bearing on the ice cream industry, but as matters developed the ice cream industry was not affected. The no-fund check bill failed of passage.

You are aware of the fact that a special session of the legislature is now in session, which will deal with code revision bills. So far as I am able to learn no bill is coming up at this session which will affect the industry in so far as these bills are concerned. Your association will undoubtedly keep you informed on developments.

Since the last session of your association we have issued 23 circular letters.

Circular letter No. 1 advised of the attendance at the annual convention and the officers elected for the coming year.

Circular No. 2 called attention to the district meetings which would be held.

Circulars Nos. 3 and 4 contained reports of the meetings, and called attention to the two bills introduced in the legislature which would affect the ice cream industry.

Circular No. 5 called attention of the members to the need of co-operation of extending credit to customers.

Circular No. 6 gave classification of accounts and a new credit list.

Circular No. 7 asked for information in regard to the cost of ice.

Circular No. 8 called attention to new classification in credit list and urged members to collect the accounts in full.

Circular No. 9 contained supplement to credit list.

Circular No. 10 urged manufacturers that it would be more beneficial to devote efforts to taking care of the volume which they had than to seek new avenues of developing volume.

Circular No. 11 contained a revision of credit list tabulation showing prices received for ice cream in different rounding states; also, called the members' attention to the new motor transportation law.

Circulars Nos. 12 and 13 called attention to additional information relative to the motor transportation act.

Circular No. 14 called attention to the increase in cost of ingredients, owing to higher markets for butter compared with a year ago.

Circular No. 15 advised that the department of agriculture is finding manufacturers generally making ice cream which complies with the state standard.

Circular No. 16 advised that the first prosecution has been made against a dealer for holding packed

Make Better Ice Cream and To Cut The Cost of Production Manufacturers Everywhere are Installing S. Heavy Duty Freezers

Here are Some of the Reasons Why

S. Heavy Duty Freezers are so easy and convenient to handle and so economical operate, while producing exquisite ices and creams of the most delicate texture.

The Picture Shows the Very
Latest Design of
**Heavy Duty
Freezer**
Equipped with
Motor Drive and
Metric Batch Weigher

They Were

FIRST to use **Roller Bearings**. **FIRST** to offer a **Practical Automatic Batch Weigher**, simple, positive, reliable, gravity operated. No floats, springs or complicated valves and levers. Optional on all sizes. **FIRST** to adopt **Chrome Nickel Forged Steel Gears** in Roller Bearing machines, annealed by careful heat treating, machined by most modern methods, hardened by scientific tempering, ground within one thousandth of an inch of perfection. **FIRST** to make **160 Quart Giant Size freezers**. **FIRST** and only ones to develop a **Complete Range of Sizes**—40, 50, 60, 80, 120, and 160 quart capacity, (40 quart made in vertical as well as horizontal). **FIRST** (and still the only ones) designed to give a **Rapid Vertical Discharge**. **FIRST** to be **Easily Convertible** from motor drive to belt and vice versa in the owner's plant. **FIRST** to have a **Removable Bearing** (Patented) and tripod support, independent of cover for front end of dasher. **FIRST** equipped with the **New Rotary Disc Sanitary Cream and Brine Valves**. Won't leak, stick or creep. Few and simple parts. Easy to take apart, clean and reassemble. **FIRST** to have **Cream Can Outlet Valve** cast solid in one piece with bronze end of can. **FIRST** built with a **Seamless Drawn Nickel-Silver Freezing Cylinder**. **FIRST** "Really Heavy Duty Freezer," Extra Heavy Construction Throughout.

And Besides, They Have

The Hinged Cylinder Cover. Standard equipment on all sizes. Saves heavy lowering and lifting, easy to clean, sanitary.

No Soldered Joints to open up and leak.

Efficient Cooling, easily controlled by Rotary Disc Brine Control Valve.

Brine Jacket with ample passages that **Do Not Clog Up Easily** and are readily accessible for inspection and cleaning.

Fruit Hopper Cast Solid in one piece with the **Bronze Cylinder Head**. Makes pouring in fruits and flavors from heaviest containers easy.

Chain Guard with grease cup to insure lubrication of chain and sprockets and prevent accidents.

Wide Mouthed Oil Hopper, cast on gear case for cleaning, inspection and pouring in oil.

Cream Can with **Solid Cast Bronze Ends**.

Clean, Sanitary Cream assured by simplified wide open cream passages, and peep hole easy to get at for inspection and cleaning.

No hidden corners or out-of-the-way pockets anywhere.

Head and Cover designed to lead fruits, flavors, and nuts directly to center of cylinder, assuring **Thorough Mixing**. **Cannot Become Air Bound**.

Whipping Device of most approved double dasher type. Comes out without removing any part of driving shaft or bushing. Easily removed, cleaned and replaced—developed to give the finest, velvety texture to the finished cream, as well as the fullest desired overrun.

Best Grade Government Bronze Bearings used where Roller Bearings are not specified.

Built entirely on the **Bolted-Together Unit** principle of assembly, (all parts interchangeable). The cylinder can be removed and replaced without disassembling the gears, bearings, and driving shafts.

High Speed Production with the least labor, attention, power and in the smallest manufacturing space.

Motor Table Easily Adjusted to take up the slack in the driving chain.

Jobbers and Representatives In All Parts of the United States and Canada.

urged manufacturers to call attention of their dealers to this fact.

Circular No. 17 called the members' attention to the market condition of butter.

Circular No. 18 called members' attention to the dates of the next annual convention, and asked for suggestions for program.

Circular No. 19 contained additional credit list.

Circulars Nos. 20, 21, 22 and 23 called the members' attention to the subjects which would be up for discussion at the convention to be held December 10, 11 and 12.

It is thus noted that the activities of the association this year has been largely confined to urging members to make prompt collection of their accounts, this being necessitated because of high ingredient costs. We have issued a total of six credit lists with seven supplements. I am sure our members will all be interested in receiving a report from a representative of the Flynn Dairy, on a case which they recently had in court over the collection of an account. The results of this case should stimulate manufacturers in keeping their accounts collected promptly.

Your secretary attended the national convention of ice cream manufacturers, and there observed that the problems which are confronting Iowa manufacturers are also confronting manufacturers in other sections, namely: increased service cost as are being developed by motor transportation and icing charges. These two subjects are to be discussed at your convention and it is to be hoped that all will take an active part in the program for the purpose of helping to arrive at satisfactory solutions of these problems. More and more are manufacturers being confronted with high service charge, the percentage of cost incurred by ingredients being gradually reduced. This presents a serious problem.

In our program we are endeavoring to stress the necessity of manufacturers realizing that the good of competitors is essential to profitable business. It is to be hoped that good will may be developed at the convention. It is highly essential to the future development of the industry. A number of mistakes have been made this past season and your secretary pleads to having contributed his share in the matter of handling the situations diplomatically.

Your president has outlined a few activities which your association should undertake during the next year. If it can be arranged to mutual advantage, we be glad to co-operate with the ice cream manufacturers in putting this program across.

Again, I want to take this opportunity of thanking the members of this association for the co-operation which they have extended during the past year, and I wish them success in the future handling of your organization.

P. W. CROWLEY, Secretary

A YELP OR TWO

(Continued from page 112)

You can't keep a good man down? R. W. wouldn't stay in bed even though he did have a cold.

C. M. Cory, secretary of the Kansas Jack R. wants to see "you all" at the Kansas convention in Wichita, January 22 to 24?

C. Ray Franklin displayed a very jovial disposition and that there is a reason for it? Oh Boy! Concentrated apple is pretty good stuff? Ask S. K. Jensen "bane" down from Kansas over the convention?

J. H. Eckel was one of the first members of the Hounds?

John W. Cowan was the arrow-feather man?

Jim Moore has a good definition for a coincidence. Ask Jim.

We couldn't get anything "on" A. Marcus? A lot of other good scouts?

CLOVERLAND DAIRY SOLD.

The Cloverland Dairy Company, Syracuse, N. Y. has been sold to Vernon F. Hovey of Schenectady, and L. Brodeur of Glens Falls in a transaction of mutual interest to the ice cream industry in the east. All outstanding common stock of the Cloverland Dairy was acquired by the purchasers from Bronson H. Hovey, president; Edward E. Hawkins, vice-president; and Frank C. Love, secretary. The new owners are well known in the dairy industry, have formed for expansion on a large scale. Mr. Hovey is vice-president and general manager of the International Cream Co. of Schenectady, and holds the same office in the Albany Ice Cream Co. at Albany, N. Y.

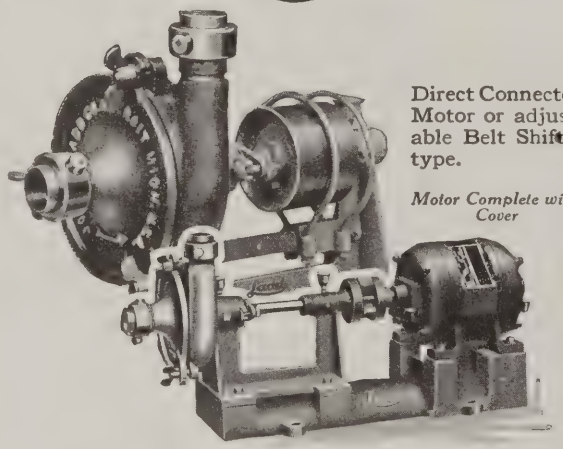

He is interested in a large number of dairy concerns. He was elected president of the National Association of Ice Cream Manufacturers at the recent national convention.

Mr. Brodeur is president and manager of the Adack Dairy corporation of Glens Falls. He was elected president of the Cloverland Dairy Company at a meeting of the board of directors immediately after arrangements for the sale were perfected. Mr. Hovey was elected secretary.

The new owners have taken charge of the Cloverland Dairy Co.

Southern Convention Proceedings

Eleventh Annual Convention Southern Association of Ice Cream Manufacturers, Little Rock, Ark.,
December 4 to 6, 1923. Directors' Meeting, December 4

A MEETING of the board of directors was called to order at 10:00 A. M. on December 4, by President M. J. Costa, with the following directors present: W. J. Barritt, J. D. Kinnett, W. E. Drake, Chas. Hooberry, Ben C. Brown, A. E. Stiling, J. W. Clopton.

Mr. Brown suggested that a recommendation be made to the new board to hold the next annual convention of the Southern association in New Orleans, November 14 and 15, 1924. These dates were recommended so that the Southern might hold their convention two days prior to the opening of the national convention, which will begin November 17. This recommendation was approved by those present. Mr. Brown suggested that the building at the race track be used for a display of suppliers during the convention. Mr. Costa appointed Mr. Brown as a committee of one, to arrange with the hotels of New Orleans to handle the next Southern convention, and it was the sense of the meeting that the Southern association would select the second best hotel for their headquarters. This was in order that the National might have the use of the larger hotel. Mr. Clopton stated that the expense of the annual banquet would be between \$2.50 and \$3.00 per plate, and asked what charge should be made for banquet tickets. It was unanimously agreed that the tickets should be sold at \$2.50, and that the association pay the additional expense.

No other business coming before the meeting, same was adjourned.

Opening Business Session.

The eleventh annual meeting of the Southern Association was called to order at 11:00 A. M. on December 4, with President M. J. Costa in the chair. Rev. K. was called on to render the invocation, following which President Costa asked Will Terry to introduce Governor McRae.

Governor McRae made a very happy address of welcome, and mentioned the fact that the ice cream industry is one of the most important industries in the South today, as it encourages dairy farming and provides health building food. He stated that the manufacturers of Arkansas were making good ice cream, and suggested that they continue their efforts along the line of building up a quality product. He stated in his speech, that the ice cream manufacturer should demand a reasonable profit on his investment and that he should continue to build his quality and sell his goods at a price that will be in keeping with the quality of his product. He stated that the ice cream industry made farmers profitable and housewives happy. He stated that he realized that he was speaking to a body of business men who are opening an industry in the South that is second to none. In extending his welcome, he stated that the entire state of Arkansas was at the command of the manufacturers and if they got in trouble while in Arkansas, they could go to the capital and he would get them out. This brought forth cheers from the floor.

Ben C. Brown of New Orleans replied to the address of welcome given by Governor McRae.

RESPONSE TO WELCOME

By BEN C. BROWN

MY friends, we are here today upon the invitation of the citizens of this beautiful and progressive city of Little Rock, the capital of the Bear state, the city where its men are courtly and courageous, and its women fair and cultured. There is something unusual connected with this visit. It is the first time that this association has met west of the Mississippi River.

This is our eleventh annual convention, a convention in our industry second only in size, in importance, but not in its personnel, to the national. Little did the organizers, the mere handful of men who met in New Orleans in 1912, think that this association would ever grow to its present proportions.

This has been accomplished, my friends, by keeping this association true to its fundamentals, an organization not controlled by one man or any set of men, and an organization where the smallest manufacturer is requested to express his opinion and take part in the discussions along with the largest, and these fundamentals must be held sacred for this association to grow and properly function.

The ice cream business has shown remarkable strides in the Southland. Twenty years ago good ice cream was known only in a limited way. Today the quality of our product has a reputation far and wide and I predict in five years the South will be making the finest ice cream on earth and that is covering some territory.

Not many years ago large sanitary plants were unknown, but today they are springing up on every hand.

Gentlemen, the prosperity of the South depends largely upon the development of the ice cream industry. This is true because the dairy business is the South's only agricultural salvation. The day of the one-crop farmer and the cotton planter is over. The time when a farmer had to wait twelve months to get his money for his crop has come to an end. With the advent of ice cream and the dairy cow, the South has come to her own and the dairy farmer gets his check in fifteen days. Prosperity for the farmer means business for the merchant, the professional man and the concerned.

Not long ago ice cream was thought of as a delicacy, a dessert, something to be served after dinner, a social luxury. Today it is recognized as a food, a well-balanced ration containing all the elements necessary for the invalid or the athlete. With this in mind our industry should be irreproachable. Let each one go from this convention with the firm determination to make the best ice cream he knows how and to charge a legitimate price for it.

It is my earnest wish that this convention will result in a better and more friendly understanding between competitors. There is no reason just because men are in the same line of business that they be enemies.

Mutual Confidence Needed.

What we need is more confidence in one another, believing that a competitor's word is as good as our own and enough backbone to keep a promise when made.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

made, even should the prospect of getting a good account hang in the balance.

National, regional and state conventions and the adoption of a code of ethics are fine, and informal meetings amongst local manufacturers are deserving of mention and should be continued, but all of these are infinitesimal and of little value if we fail to cultivate the acquaintance of the competitors. We should know, and be able to meet him on common ground and discuss in friendly terms our every day perplexities.

I am frank to tell you that this is the only way in which you are going to settle your little difficulties. All other methods that have been tried since the world began have resulted in disaster. The panacea for all our ills is **co-operation**.

If this meeting will establish a more happy and make a more kindly and honest business world, than we have not met in vain, and we can all go home feeling that we have really accomplished something and

that this association has blazed a trail worth others to follow.

"There are loyal hearts, there are spirits brave
There are souls that are pure and true,
So give to the world the best you have,
And the best will come back to you.

"Give love, and love to your life will flow
As strength in your utmost need,
Have faith, and a score of hearts will show
Their faith in your world and deed.

"Give truth, and your gift will be paid in kind
For honour with honour will meet.
And a smile that is sweet will surely find
A smile that is just as sweet.

"For life is a mirror of king and slave;
It is just what we are, and do.
So give to the world the best you have,
And the best will come back to you."

* * * *

ANNUAL REPORT OF SECRETARY-TREASURER

By J. W. CLOPTON

THE secretary treasurer will not burden you with a lengthy report as most of you are familiar with the work that has been done during the past year. I have made personal visits to Nashville, Tenn., Columbia, Tenn., Montgomery and Birmingham, Ala., Memphis, Tenn., and Louisville, Ky., in interest of the association.

I have attended state conventions at Jackson, Miss., Birmingham, Ala., the Tri-State convention at Memphis, Tenn., and the National Association's convention at Cleveland, O.

I have either gone or arranged for committees to go to every place where friction was reported and have succeeded in getting satisfactory adjustment in almost every case. Assisted in getting a law enacted in Alabama setting a standard for ice cream and regulating return of empties. Assisted Florida manufacturers in adjusting standard requirements for butterfat in their state. All urgent matters were handled by telephone and telegraph and regular inquiries were promptly replied to by letter. Something over 5,000 letters were sent out from my office during the year.

I have endeavored at all times to encourage our members to make better ice cream and I am glad to say that as a whole the ice cream manufactured in the South today is far better than it was a few years ago. I have worked with the national in trying to get reduction in billing weight of ice cream in states where 115 pound weight is in effect. We have promise of relief soon and will continue our efforts until we get relief.

I made a thorough investigation of a newspaper report that two children had died from the effects of eating ice cream in one of our larger cities, my investigation revealed that the children had not eaten ice cream immediately prior to their death and that ice cream had nothing whatever to do with it. I have statements in my files from the attending physician and the county and state health officer to this effect. I would like to suggest here that we begin a campaign of education or co-operation with the newspapers of our respective cities asking that they refrain from publishing such statements until they have authority from attending

physician, county or state health officer and that death or sickness was actually caused from ice cream.

Thanks The Ice Cream Review.

While we are spending thousands of dollars in getting the public to eat more ice cream and showing the food value of ice cream and impressing on that ice cream is pure and wholesome, we should be hampered by careless news articles that are unfounded.

I wish to take this occasion to thank the executive committee for their full co-operation during the year. It has indeed been a pleasure to carry on work of my office for I have felt free at all times on any one of the executive committee or any directors for assistance.

I also want to thank the trade journals for their operation and assistance during the year, we are especially appreciative of the valued assistance given in Cleveland by The Ice Cream Review.

Financial Report.

Financial report is shown by annual audit of accountant and attached hereto as of Oct. 1, 1922. Balance on hand of \$176.69. Since that time amounting to \$1,695.00 have been received and disbursements amounting to \$645.23 have been made. Balance on hand of \$1,065.77 plus balance on hand of \$176.69 making grand total on hand as of Oct. 1, of \$1,242.46 as per bank statement attached.

PRESIDENT'S ADDRESS

By M. J. COSTA

IT is with a great deal of pleasure that I call this the eleventh annual convention of the Southern Association of Ice Cream Manufacturers to order, and as your president I extend to each of you a hearty welcome, and it is my hope that you will enjoy to the fullest the hospitality of this great state and this beautiful city.

In assuming the duties of president a year ago today I did so with great anticipation and with lofty ambition. It was my desire to render great service to the association during my tenure of office, but the year has flown by so fast that before I could realize it my term of office is at an end and I have not accomplished what I had so sincerely hoped that I would be able to do.

I do believe, however, that the year 1923 has been a most successful one for the ice cream dealers. It has certainly been better than the years 1921 and 1922; and I am firmly of the opinion that the coming year should be a greater one still, for the reason that wages are higher as a whole than they ever were. Prosperity is greater, there is more money to be spent, a prosperous time looms on the horizon, so 1924 ought to be the greatest year in the history of our industry. In fact, it ought to be the most prosperous year in the history of the country in all lines of business, especially in the Southland where cotton is coming into its own, as shown by the prices being offered today.

It behooves all of us to work together and improve our business through co-operation rather than through any manner of cut-throat competition. In my mind there is a great field in our section for an increase sale of ice cream in our immediate territory by creating

business, making new dealers so that we do not to spend our time trying to get our competitors; for whenever, we get to thinking too much taking trade from our competitor, we drift into a war," and, gentlemen, nobody profits by price war.

The dealer may think that he has an advantage in a situation like this, but he has not. The moment cutting begins, profits naturally stop, and then the deterioration in quality as well as in service takes place. The consumer does not get his money's worth. The nearby manufacturers will also suffer, as the quality of ice cream which results from a profitless controversy lessens the consumer's appetite for ice cream. For, as you know, however hard we may try to present ice cream as a food, in the last analysis ice cream always predominate as a confection.

People do not buy ice cream like they do bread or meat. They buy it because it tastes good, so the more we make it, the more we can sell. We should fight for quality rather than with price; for quality will win out everyone of us, and it tends to increase the consumption of ice cream. We have a law in the Southern Association that a member cannot belong unless his ice cream contains a minimum of 8 per cent butterfat and a minimum of 31 per cent total solids. This rule should be strictly enforced. I also firmly believe that the Southern association should do some co-operative advertising, laying special stress on its seal or insignia.

If we start in to do this we can make membership in the Southern association a valuable asset to every ice cream manufacturer belonging to it. We should also try for a uniform standard of 8 per cent butterfat in all our states.

Now, a few words in regard to the national association meeting next year in New Orleans. Gentlemen, this will be our convention, and we should do everything in our power to make it a great success. We will use every means to induce the supply people to exhibit the equipment exposition the equal of the one in London, or better if that be possible. For while many who attend these conventions enjoy renewing acquaintances and getting inspiration and knowledge from talks, the most interesting feature is the exposition. Above all other industries the men in ours seem to be imbued with the spirit of progress and betterment, and are always looking for something better.

I suggest that the next meeting of the Southern association should be held immediately preceding the meeting of the national association and from the place wherever we may meet that we go in a body and meet the national at New Orleans.

In closing, above everything else, I want to compliment our secretary, J. W. Clopton. I have worked with a better or more efficient and capable man in my life. Fellow members, our friend Mr. Clopton is the heart of the Southern association. I want to thank the officers, directors, members and association members for their hearty support and co-operation. I wish to thank the program committee and the Little Flyers for the splendid program that they have served and for our entertainment. I sincerely hope that your visit to this convention will be both enjoyable and profitable.

The mere fact of shaking hands with old friends and acquaintances should be worth the trip to Little Rock. I thank you.

(Southern convention proceedings continued in February)

Dixie Flyers Make Plans for Great 1924 Convention at New Orleans

Harry Benners of Crescent City, Long Prominent in Southern Industry, is New President, F. W. Hooton, Birmingham, Elected Vice-President, "Pete" Miller Re-elected Secretary

THE Dixie Flyers will co-operate toward the success of national exposition to be held in New Orleans next year in connection with the national convention and the convention of the Southern Association of Ice Cream Manufacturers.

This was brought out at the annual meeting of the Dixie Flyers, which was held December 6, the last day of the Southern convention at Little Rock.

The Flyers will not, as an organization, take part in the exposition to be staged at New Orleans by the Association of Ice Cream Supply Men. They will retain

HARRY A. BENNERS,
President.

identity and carry on their usual work in the service of the Southern association and its convention. The members, however, will be perfectly free to co-operate with the national supply association and to engage space at the national exposition.

Harry Benners of New Orleans was elected president of the Dixie Flyers. Mr. Benners, who is a charter member of the Southern Association of Ice Cream Manufacturers, is widely known in the Southern ice cream trade. He recently announced the organization of Benners' Selling Service. As the head of this service he represents in the South some of the nation's leading supply houses.

Mr. Benners aided in the organization of the Southern association, and for two years was one of the directors of that body. He is one of the most popular supplymen operating in the South, being highly regarded by ice cream manufacturers all over Dixie.

F. W. Hooton of Birmingham was elected vice-president. Mr. Hooton represents the Meyer Dairy Equipment Co. of St. Louis. He has been operating from Birmingham for little more than a year. He is widely

known in the Southern trade and has many among the manufacturers of his territory.

Mr. Hooton's election was unanimous, as also the re-election of P. N. Miller, Jr., to the post of secretary. "Pete" Miller, as he is familiarly known throughout Dixie, is a charter member of the Dixie Flyers. He has held an office since its organization. Flyer closely in touch with the organization's work gives the bulk of the credit for the service it has performed for the Southern ice cream industry. Mr. Miller gets his mail at Birmingham. Gordon Moulton, Turnbull Cone Machine Co., Chattanooga, was chaplain.

Auxiliary Ladies Honored.

A sentimental touch to the meeting came when the Dixie Flyers presented flowers to Misses Helen Carmichael of Little Rock and Mary Kate Carr of Montgomery. Carmichael was thanked for the services she has performed for the Flyers in connection with the exposition for the Southern convention. She is connected with Watson & Aven of Little Rock. A. E. Watson, president of the Arkansas Ice Cream Manufacturers' Association, was in charge of the registration of the exposition. Miss Carmichael took the most of this work on her hands. Due to her earnest work, all was in readiness for the exposition when delegates reached Little Rock.

Adolph Skinner, charter member and the first elected vice-president of the Flyers, who is now confined to a sanitarium at Asheville, N. C., was honored by his friends. The Flyers sent Mr. Skinner a handsome bouquet of flowers. His letter of thanks will be found in another column in this issue.

* * *

"Bob" Everett Speaks.

Roberts Everett, secretary of The Association of Ice Cream Supply Men, addressed the meeting. He said that although no official action had been taken at this time, there will be an exposition at the national convention.

The size of the exposition, he said, will depend on the facilities for such an affair afforded by New Orleans. A number of likely show places are under consideration, he said. These include the warehouse of the American Busch Co., preferred by manager E. B. Geisler, the dock pier exhibition halls, and a large building known as the Podyras.

The Dixie Flyers carried out their usual lavishly planned entertainment program for the manufacturers and ladies.

* * *

SOUTHERN ICE CREAM EXPOSITION

APPROXIMATELY 30 booths comprised the exposition of the Dixie Flyers. It was a most creditable trade show, though the facilities of the Marion did not offer as much space as the Dixie supplymen need for an affair of this kind.

Very approximately, the exposition was held in the convention hall, the delegates being seated in the middle of the room with the booths flanking them on all sides.

"Pete" Miller, as usual, did the heavy work of showing the manufacturers found everything attractively arranged when they arrived.

The exposition has become an important feature of the Southern conventions. Assurance of this was given at the conference of Dixie ice cream men at the national convention at Cleveland. Many manufacturers pressed themselves, both at Cleveland and Little

* * *

ob Noodleman, Texas Barrel Co., was in charge booth, assisted by A. Lefkovits. Mr. Noodleman he high favor of the ladies by donating a flock venir monkeys from Mexico to be auctioned off annual banquet for the benefit of the ladies' ry association.

* * *

B. Scruggs was down from Richmond to represent

the Chalmers Gelatine Co. He was accompanied by N. W. Betts. These gentlemen are well-known in the Southern trade.

* * *

Achelpohl Entertains.

Charles H. Achelpohl and "Smiling Pat" Hawkins won high esteem in the hearts of the ladies and gentlemen by serving punch at the dances. Mr. Achelpohl is vice-president and general manager of the Citrus Products Co., Chicago, now handling the famous "Kist" flavors. Mr. Hawkins, well-known in Michigan and surrounding points, represented the Dry-Zero Insulation Co., Chicago.

So well did these products tie up, Messrs. Achelpohl and Hawkins decided to have twin booths. So the former prepared his sherbets and ices and dished them out from the latter's cabinets.

During the dances they served a refreshing "punch," made from the mixing of Lemonella, Limella and orang- ella flavors.

* * *

Theo. Bernstein and S. S. Brady were on the job with the glad hands. They make more friends every year for the Blanke Manufacturing and Supply Co.

* * *

Harry A. Benners kept busy telling the visitors to his booth about his newest venture—"Southern Selling Service." This service, he explained, puts manufac- turers of the South in touch with high-class supplies, assuring prompt delivery, advantageous price "and a man on the ground to be responsible for everything." Mr. Benners' booth was visited by many old friends who recalled the days when he was busy helping organ- ize the Southern Association of Ice Cream Manufacturers and, later, serving as one of its directors.

* * *

Gordon Moublo was in the booth of the Turnbull Cone Co., Chattanooga. He was displaying his com- pany's cones, which he says are growing in popularity. Gordon is known throughout the Southern trade.

* * *

In the Massey & Massey party were Mr. and Mrs. R. J. Massey, O. A. Kline and A. H. Anderson.

* * *

Herman Allenberg represented the Alco Cone Co., Memphis.

ADVERTISING IN THE ICE CREAM REVIEW IS A GUARANTEE OF MERIT.

In the booth of the Blanke-Baer Extract Co., St. Louis, were W. L. Castle and Calvin S. Morris. Mr. Castle was accompanied to the convention by his bride of last June.

J. Will Carpenter, F. Haines and Jake Beck were in the booth of the Haines-Carpenter Co., St. Louis.

Snapped at the Southern Convention:—O. M. Parrish, Richmond Cedar Works; Gordon Mounblio, Turnbull Cone Machine Co.; G. A. Meyer, Grand Prairie Ice Cream Co.; A. Marcus, Consol Wafer Co.; G. L. Newman, Daigger Corp.; Lawrence McGrath, U. S. Freezer & Machine Corp., and W. L. Castle, Blanke-Baer Extract & Preserving Co.

The Eskimo Pie booth was in charge of C. O. Lund and E. A. Williams.

Paul Mojonnier was passing out souvenirs from the booth of Mojonnier Bros. J. A. Cross was there, too.

Charles P. Metzger represented the Menasha Printing & Carton Co., Menasha, Wis., in that company's booth.

The booth of the Consolidated Wafer Co., Dallas, Tex., was occupied by A. Marcus.

H. E. Stinchfield went a long ways from home to take care of the booth of the Gould Cream Co., Minneapolis. His booth was just behind the speaker's platform, and everybody got a good view at every session.

W. P. Abel was at the convention for his Imperial Mix Co. and Mr. Thompson for the Emery Thompson Co.

The Scott Manufacturing Co., Omaha, Neb., had an attractive booth.

Much interest was shown in the booth of Seton Co., Chicago. F. W. Hooton did the honors in the booth of the Meyer Dairy Equipment Co. Deas Read was a local firm to have a booth at the convention. R. Provost took care of the Warner-Jenks Company's booth. "Pete" Miller found time to be in the booth of the Crown Fruit & Extract Co. H. Moore was in the booth of the Nathan W. Scott Co., with a nice line of advertising material.

Alex P. Sullivan displayed the product of the M. Salt Co., New Orleans.

Sam Landau lays claim to being the original luck artist. At the Cleveland convention he was suffering from a hang-nail that considerably disturbed his peace of mind. A ripe young boil was just getting its worst work when he reported at the Little Rock convention. That didn't keep him from handling the right containers when visitors visited his booth, however.

Byron Morris, retiring vice-president of the Little Rock Flyers, found time from his official duties to help in the care of the Creamery Package booth.

In the booth of the Northwestern Corp., Minneapolis, was P. L. J. Crill. E. F. Wellinghoff was in charge of the Creamery Package Company's booth, assisted by several salesmen. J. W. Mulligan told visitors in the booth about the Rex Extract Company's flavored extracts. The Nizer Iceless Cabinet Co. had an attractive booth.

NEW YEARS GREETINGS FROM THE FLYERS' NEW PRESIDENT.

New Orleans, Dec. 22, 1923.

Dear Dixie Flyers,

As the holidays approach, I feel the time is appropriate to express my appreciation of the honor you have conferred on me by my election to the presidency of the organization.

Accepting this office, I realize the responsibility I have undertaken, as well as the confidence you have placed in my ability to successfully guide your organization through a period which no doubt will be the most important since the organization of the Dixie Flyers. Therefore I pledge every possible effort to deliver to my fellow members, a business organization that will meet with your expectations, also an earnest endeavor to establish a spirit of goodfellowship and harmony which will be lasting.

I am also taking advantage of this opportunity, to express the appreciation of the Dixie Flyers for your individual efforts in staging the exhibits at the Southern Convention at Little Rock, and which was beyond doubt, the most successful as well as interesting display ever shown at a convention of the Southern ice cream manufacturers and which was a credit to our organization. I now officially and personally extend greetings to you and yours for a Merry Christmas and a Happy and Prosperous New Year.

Sincerely yours,

H. A. BENNERS,

President Dixie Flyers.

OKLAHOMA SHORT COURSE.

A one week course in making ice cream has been arranged by Prof. A. C. Baer, head of the dairy husbandry department, Oklahoma A. & M. College, Stillwater. The course is to be held February 18 to 23.

The circular reads as follows: The ice cream makers' course of one week is offered to provide an opportunity for ice cream makers and manufacturers of ice cream plants to spend a short time each for special instruction in the following:

Standardization of ice cream mixes for butterfat and solids; factors in controlling the overrun; overruns; pasteurization of mixes; acidity tests; butterfat and solids determinations by various methods. Final tests such as the efficiency of gelatine, milk, ice cream powders and improvers, are of special interest to the ice cream factories. An annual educational ice cream scoring contest is a feature of the course.

A special circular covering this course can be obtained from the Dairy Department, A. & M. College, Stillwater, Okla.

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known in an advertisement in The Ice Cream Review.

Annual Luncheon Ladies' Auxiliary.

Ladies Play Big Part in Southern Convention

Auxiliary Re-elects Old Officers and Plans Social Features for National Convention

AN outstanding feature of the Southern convention were the ladies and their activities. Southern conventions in the past have been famous for their social features. The ladies were more in evidence at Little Rock last month than at any previous convention.

The ladies auxiliary body gave evidence that it is taking its work quite seriously. There were two lively business sessions of the auxiliary. The ladies showed their appreciation of the good work done by their officers during the past year by re-electing them. They are Miss Sally Mahoney, Chicago, president; Mrs. R. J. Massey, Chicago, vice-president; and Mrs. E. B. Geisel, New Orleans, secretary-treasurer.

A tribute to this organization and its uniquely useful place in the association's work was paid in a story that appeared in The Arkansas Democrat the last day of the convention, written by a member of the editorial staff of The Ice Cream Review. The story particularly centered around Miss Mahoney and her interesting career in trade.

The ladies found not a dull hour during the convention. The Dixie Flyers well provided for their entertainment, and there were enjoyable theater parties, interesting sight-seeing tours, followed by dinner-dances in the evenings.

The treasurer's chest was replenished by an amount at the annual banquet of the Southern association.

Jacob Noodelman, head of the Texas Barrel Co., Houston, Tex., donated two souvenir monkeys from Mexico. W. F. Meyer of the Warner-Jenkinson Co., St. Louis, was the highest bidder for one of the monkeys, and R. J. Massey, head of Massey & Massey Co., Chicago, was the successful bidder for the other.

At their different sessions the ladies discussed at great length their part in the social features of the great ice cream pageant to be held at New Orleans next November.

There were approximately 150 ladies on hand at their second convention, this remarkable growth being the source of much satisfaction to the charter members.

Lookin' On At Little Rock

Word Sketches of What Was Picked Up at Southern Convention by a Staff Writer
 Who Eavesdropped at the Doorway of the Convention's Human Side

Ice cream convention always offers an interesting adventure in human nature. The past Southern convention was no exception. At Little Rock nature fairly paraded in all forms. It would be to say which was the more interesting, the at the business sessions or the different little tricks shown by the delegates in various ways. Convention such as just held at Little Rock proves human nature doesn't always run true to form. Hence, manufacturers who had looked forward to a trip as relief from the daily routine of their were seen quietly sitting in corners, between doing just exactly what they generally do at

evening a man who prides himself upon being "leave my worries on the desk" at closing time, in animated discussion with a group of men in lobby regarding service and delivery matters. into this problem then much more thoroughly ever had at home.

* * *
 Every man who often has made believe that trade don't teach him much was off in a corner to reading Professor Baer's Inquiry Department Ice Cream Review. He suddenly looked up and Professor Baer himself coming forward, and quickly page to a machinery ad, finally engaging the in conversation about the ad. If the professor he was selling the machine advertised, no doubt would have bought one, in his excitement.

* * *
 There are three men in the ice cream industry on whom you are so courteous and correct in every way you do, they are forever making you want to and see if your necktie is on straight when listening to them. They fairly put you on keeping your verbs in the proper place. In circumstances they are at extreme ends of the spectrum. One of them is that polite gentleman Neilson of Canada. Another is that equally gentleman E. B. Geisel of New Orleans. The Southern association's new president, W. of Tampa, Fla.

The Dixie Flyer, passing Mr. Barritt in the hotel before the opening of the first session, paid

his respects to the rainy weather in this wise: "Ye gods, what a heck of a day—just right for a murder."

"It is extremely inclement weather," replied Mr. Barritt. "It is exactly the only thing that I don't like about a trip North; I miss our sunshine in Florida."

"North!" snorted the Dixie Flyer. "Say, you don't call this North. I've just traveled 450 miles in a southerly direction to make this convention."

"It is North to me," replied Mr. Barritt. "I have

just traveled more than 500 miles in a northern direction to attend this convention."

* * *

There should be no mention of polite gentlemen any time, though, without including the name of the deceased Paul Mojonner.

E. B. Geisel was trying to make a group understand what a nice time the ice cream makers of New Orleans and Louisiana, with the exception of the Dixie Flyers, are going to show at the convention delegates next year.

One can look at Mr. Geisel and read the stammering extremely well-mannered, hospitable host. He has a perpetual expression which seems to say, "I can do something nice for you" when he's talking.

A supplyman from Cedar Rapids listened to Mr. Geisel with singular interest as he told of the national convention. When the New Orleans men finished and walked away, the Cedar Rapids gentleman heaved a long sigh and said, "Gee, aint he a Southerner, though, with all that charm of politeness and hospitality, and that nice drawl."

"Southerner?" echoed a bystander from St. Louis. "He was born and reared in a Northern city. He learned his English a long time before he was born south of Grand and Olive Streets. You spend years in New Orleans swapping the time of day with such men as Bennie Brown, E. R. Harris, and Sam Dampier, and see if you don't throw away your r's."

* * *

Roberts Everett, secretary-manager of The Association of Ice Cream Supply Men, never poses for a picture and blushes every time he sees his name in print. As he was leaving the hotel with a friend one evening, he saw the door Mr. Everett suddenly started and drew back. His companion followed his gaze and saw a snail peeping in their direction through holes in a cigar box.

"That isn't any gun," he said to Everett, looking at the snail. "It—it looked like a camera at first," said the secretary-manager of The Association of Ice Cream Supply Men, drawing a sigh of relief and resuming the conversation.

Thoughts on walking through the Hotel Marietta the last morning of the convention:

How does Pete Miller keep his joints from aching the morning after the dance? How does he dance with such spirit and agility? In fact, how does he dance at all?

Does Sally Mahoney wear her smile when she is alone? Who else can smile before ten o'clock in the morning except Sally and Happy Hooligan?

How long ago was it when Gabe Wegener was like the photo published by The Ice Cream Review? How much larger will J. W. Mulligan have to grow before he bursts? Wonder how many possums Jim would catch this winter if he did not have to sell his & Company's dairy equipment? Where does Roy find shoes to fit him? What would have happened to Gordon Moublo if Mary Kate would have stayed on the ball-room floor last evening? What do they see in their sight-seeing tours? What do they see in Henry W., George L., Gordon L., Andy? What do they see in "Doc" Brown such an entertaining cuss? What do they see in F. W. Hooten learn so many cuss-words? What do they see in "Bill" Terry's face from cracking when he sneezes broadly? Is there anybody in the South that J. W. Clopton doesn't know? How does J. W. Clopton find time to run his business, the Southern Association, and Decatur, Ala., all at the same time? Does J. W. Clopton ever sleep? Where in thunder is Roy J. How many more times is N. W. Betts going to

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

had theirs yet? How many more times are going to ask if it gets cold in Milwaukee? Why the Southern association set aside one day of convention for folks to sit down and think and pray please? Why doesn't the Southern association set aside one day for folks to ask a lot of foolish questions and get 'em over with—like N. W. Betts?

The gentlemen of Arkansas believe in prayer. When the delegates to the Arkansas state convention gathered before the opening of the Southern convention there was considerable hem-haws as the officers spared for a moment occasionally looked at each other as if waiting for somebody else to speak. Finally R. L. Hargrove

said, "I'm not known as a very good church man, but I'm wondering if anybody here has made arrangements for a minister to open the meeting." "I'm thinking about the same thing," ejaculated Terry, his face flushing out in one of those "Terry smiles," only this time a sort of boyish, self-of-myself smile. "Fact of the matter is," he said, "I thought somebody else might have called for prayer."

He followed business of calling different local ministers. Dr. Blank was busy in the chapel. Dr. John was conducting a wedding ceremony. Dr. Richard was attending a meeting of the Evangelical society. His name was down at the Y. M. C. A. Dr. Blank was not sure that he would have time to visit with the ice cream men before getting his train for some other city. So it was throughout the list. And of an hour and fifteen minutes Mr. Terry admitted that it was a hopeless job, and the convention was reluctantly opened without prayer, exactly as usual.

Arkansas gentlemen believe in prayer in Arkansas.

The night before the opening of the Arkansas convention, the Arkansas gentlemen, in town early for their own part in and to make preparations for the Southern convention were on guard in different parts of the Marion Hotel, watchful for visitors from other states.

A boy rushed up with two heavy bags. Two of the Traveller state braced themselves for the start to welcome the arrival, should he prove to be an ice cream man. A few steps behind the bellman an old gentleman who didn't seem to mind the cold went down outside: he was without overcoat or hat. There was plenty of gray in his hair, and more in his hat. The reception committee gazed past him, waiting for the guest to whom the recently arrived baggage belonged. They waited several minutes and were not rewarded.

Meantime, the gentleman traveling in his coat and hat went to the registration desk.

"Is there a good place to buy an overcoat? I'll be in a taxi," he told the clerk.

"Stand around the corner, Mr. Kent," answered the clerk. "He looked at the new arrival's name on the program book and read, 'C. A. Kent, Kentwood,'"

the newcomer, who could have added to his name "organizer and first president of the Southern Association of Ice Cream Manufacturers," calmly said, "I'll be in a taxi." While the gentlemen on the reception committee kept watch for the arrival of a Southern delegate.

Everybody in Georgia knows "Mike." "Mike" doesn't know quite everybody in Georgia.

They were discussing dairying at one of the convention sessions. Different speakers showed they didn't know much about dairying, but there was considerable discussion nevertheless.

Finally a gentleman in the back of the room suddenly got the floor. He began talking about dairying. He told how it was done in Wisconsin, Minnesota, the Dakotas, and so on. He talked cows and feed and cream checks. Dairy facts and figures fairly rolled from his tongue.

President Costa listened for several moments in surprise and then said to the speaker, "Where are you from?"

"Atlanta," replied the speaker, and he continued to tell the delegates how folks carry on dairying in Wisconsin and Minnesota, the two great dairy states. The laugh was on "Mike," and he didn't have the heart to push the speaker and find out that formerly he was assistant dairy commissioner of the world's leading dairy state.

* * *

He is called a hard-boiled man, this manufacturer who sat in the Pullman with two other ice cream men as the train pulled out of Little Rock just after the convention. The three were at dinner. They discussed everything from the iceless cabinets to homogenizers.

Finally the so-called hard-boiled man told this one, though the quotation may not be exact:

"There have been times in my life when I was ashamed of myself."

"An ice cream maker brought about one of those occasions for me. It was during the war. I had made up my mind that I was the only manufacturer in the town honestly supplying real strawberries in my strawberry ice cream. The strawberry supply was getting low; I wasn't sure when I could be able to get more."

"Finally I told my ice cream maker to cut down on the strawberries and fill out as best he could. He looked at me several moments without speaking, and then he said:

"'Mr. ———, I've never told any man I've ever worked for that I would not do something he told me to do. But right now I am going to request you not to ask me to carry out this order. As long as we handle strawberry ice cream, let it be strawberry ice cream with real strawberries. If the time ever comes when we really can't get strawberries, let's tell our dealers right straight from the shoulder what we are up against and let them know the kind of ice cream we can offer as strawberry ice cream. I know that you haven't built up your business by letting anybody think you would misrepresent anything, but that's just exactly what they would think in this case.'"

"I was shaking hands with him before he was half through," said Mr. ———, the so-called hard-boiled man.

* * *

Thoughts while sitting around waiting for the Arkansas convention to open:

So Will Terry's name is not Will after all. How funny to tell everybody you have been knowing him well for years, and then see him at home and find out that he goes under the alias of his right initials—H. T. Terry. Says he is going to run for school commissioner. Maybe he'll teach 'em about ice cream.

R. L. Hargrove wants the convention opened with prayer. A man who lives on the border of Texas, Oklahoma and Arkansas probably feels the need of it.

E. A. Watson certainly wears a nice, glad-to-see-you look on his face. Believe he is. Acts just as nice as if

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

he had his dealers together and all of them were ready to pay up.

Terry's still telephoning for a minister. He doesn't seem to know many local ministers. Neither does E. A. Watson, nor F. T. Watson, nor R. L. Hargrove. But ministers are listed in the telephone book, just under the directory of "Meters," "Midwives," and "Military Organizations."

Terry's talking to Dr. Blank. "Blankety-blank," says Terry, as that reverend gentleman tells him he is too busy counting Sunday's receipts, or something like that, and so can't officiate at the opening of the convention.

Well, Watson has rapped the gavel and it's about to open. Watson is calling the meeting to order: "Ladies and gentlemen—that is, gentlemen and supplymen—Er, anyhow, you know what I mean." All think they do, but are not sure.

ROSZELL CO. EXPANDING.

Construction work has started on two additional units to the plants of the J. D. Roszell Company, Depot and Washington Sts., Peoria, Ill. A 500-horse power steam plant, said to be when completed, one of the most efficient steam power plants in the country, is being erected adjacent to the company's ice plant at 710 Washington Street.

Glass-lined pasteurization equipment and the latest improved milk and milk bottling machinery will be installed in the new dairy plant. Ample provision is being made to convert 100,000 pounds of milk daily and the various other products made by the company. The cost of the additional units to their present ice, ice cream and candy plants, will be in excess of \$100,000.

TO MAKE SOUTHERN LUNCHEON ANN CONVENTION FEATURE.

So well pleased are officials of the Southern Association of Ice Cream Manufacturers with the attendance of Southern delegates to the National Convention the lively conference held at Cleveland, it has decided to make the Southern luncheon a regular feature of the National Conventions in the future.

Secretary J. W. Clopton announces that meeting the association will be called upon to bear in next annual luncheon of the Southern delegates at a national convention in the future.

FLORIDA MANUFACTURERS ORGANIZING.

The Florida ice cream industry has joined the organization ranks. The manufacturers in that state met at Orlando November 22 and formed an organization. J. Barrit of the Tampa Dairy Co., Tampa, was president.

Other officers of the association are A. E. Bedingfield, vice-president; J. G. Bedingfield, secretary and treasurer, and the following directors: W. J. Barrit, Stirling, Tripple Cities Ice Cream Co., Dayton; Bedingfield, Frozenrite Ice Cream Co., Tampa; Nielson, Palm Beach Creamery Co., West Palm Beach; R. W. Freyschmidt, Velvet Ice Cream Co., Bradenton, Fla.

The active members of the newly formed association constitute a large majority of the manufacturers in the state. Officers believe that their association will be one of the most effective trade associations in the South.

Mr. Barrit, who leads a large number of new members to the Little Rock convention, stated that he has virtually every manufacturer in his state to be a member of the state association.

Pacific Manufacturers Meet Under Folds of the Union Jack

Canadian Manufacturers Help Make Eighth Annual Convention of Pacific Ice Cream Manufacturers' Association an Outstanding Success

MANUFACTURERS of the far west met December 3, 4 and 5 under the shadows of the Stars and Stripes and the Union Jack. It was the first convention of American ice cream manufacturers ever held under a foreign flag. Vancouver, B. C., was the scene of the eighth annual convention of the Pacific Ice Cream Manufacturers' Association, composed of manufacturers in that vast expanse of territory stretching from the Rocky Mountains to the coast, extending from California to the Canadian Northwest.

Complete satisfaction was the sentiment among delegates after taking part in the whirlwind sessions of the snappy convention and partaking of the splendid hospitality of their friends of the Old Dominion.

Officers were re-elected, important trade topics were discussed, and The Ice Cream Review was included in the resolution of thanks extended to friends whom the association officers believed had aided in the success of their convention.

Following is an outline of the convention's procedure:

* * *

The eighth annual convention of the Pacific Ice Cream Manufacturers' Association opened with a luncheon on Monday, December 3, in the Vancouver Hotel. Vancouver, British Columbia at which time Mayor Charles E. Tisdale extended the key of welcome to President W. V. S. Robb. Response to the mayor was made in a few well chosen remarks by Fred N. Martin of Spokane, Wash., past president of the National Association of Ice Cream Manufacturers and for 4 years president of the Pacific Ice Cream Manufacturers' Association.

Immediately following the luncheon the first session was called to order by President W. V. S. Robb, who spoke of the association's acceptance of the invitation extended by Vancouver members to hold this meeting across the line, the first in history of the association, and of his desire that this association work as diligently and successfully in handling the problems of the British Columbia members as those in the four northwestern states—Washington, Oregon, Idaho and Montana.

Telegrams from various members not present and expressing their regrets were read by the secretary. A telegram from the Association of Ice Cream Supplymen expressing the good wishes of that organization was also recorded.

Bert H. Walker, secretary, in his annual report said: "Your association has passed through another year, and from the reports that have reached this office the majority of members have had a satisfactory year's business, although the matter of low prices for the finished product has not harmonized with the high cost of raw materials in most places. This is attributed to local conditions which manufacturers have had to cope with.

"There have been several matters of particular in-

terest to the ice cream manufacturers during all of which you have been informed of if you read the monthly letters issued by the association. Legislatures of the different states have been in session and the members of our legislative committees and state have had their hands full. We trust their efforts for the good of the industry have been successful.

"The work of this association has been commended by the trade press for their efforts to advance the ice cream industry. The declaration of principles adopted at the Spokane convention has received a favorable comment. We received a request from the secretary of the New England Ice Cream Manufacturers' Association for 150 copies of our booklet for distribution among their members. Gentlemen, when staid and conservative New England will pay us that compliment we feel we have reason to be proud of what the Pacific Ice Cream Association is doing. Another

I might mention, one of our associate members calling a manufacturer in Colorado for him a copy of 1922 report. The man was so interested in the papers presented and the work we were doing that he wanted to be the secretary for copies of the report for his own information. Several other requests have come in from different sections of the country which further testify to the show how far-reaching our efforts have been.

"There never has been a time when there was more need of association work. New conditions are arising that require serious consideration. Our program contemplates taking up a few of the outstanding ones by following along the lines indicated by the various speakers. We cannot fail in accomplishing a great deal for our industry during the coming year.

can be accomplished if each member will give time and influence to assist the officers in their work. No one individual can make any great success, but we have the men in this organization who can do things and the success of the association depends on what you are willing to do. It is not a case of expecting the cow to back up into the barn to be milked; we have to go after the cow.

Sam Greene Speaks.

Sam H. Greene, manager of the California Dairy Council, whose subject was "World's Dairy Congress," reviewed for the benefit of members a sketch of the dairy industry. Mr. Greene said: "One of the best statements made was that of Herbert Hoover, secretary of agriculture, 'Dairying is the stabilizer of national prosperity,' which indicated the tremendous importance of the dairy industry in the minds of our government. Some of the greatest authorities of the world on dairy science and bacteriology attended the congress and changed opinions for the benefit of over 1200 workers. There were 167 delegates present from 15 nations.

(Continued on next page)

Guy L. Herrick, third vice-president.

Bert H. Walker, secretary-treasurer.

Jay H. Kugler, field secretary.

Directors: W. V. S. Robb, J. E. Dunne, S. J. Simonson, Guy L. Herrick, George W. Weatherly, G. S. Helphrey, D. M. Dorman, P. M. Gregory, F. N. Martin, A. R. Hoy, Bert H. Walker and F. M. Raymond.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

as soon as the public knows more and more of the ele-
mentary necessary to good health, all of which are contained
in milk, they will use milk and milk products to a far
greater degree. Butterfat as a principal food factor will
be essentials whether in milk, butter or ice cream.

We get by giving is an old saying but aptly applies to
the ice cream industry and I hope that you will realize that
the important members of the dairy industry. The
work of the California Dairy Council is visualization in car-
pentering the work of developing a greater market for milk
products, which is purely a matter of education.
to the people with facts and our statements are easily
understood.

The ice cream industry, in my opinion, is spending more
money and getting less for it than any other industry I
know of. People don't know what ice cream is and much
money is spent on shouting the word 'best' than any
other. Most ice cream is eaten at soda fountains and people
do not look upon it as a food to eat at their table. This is
something to be solved by slogans, such as a great many
men now use, but by carrying the knowledge to the
people that they are buying one of the finest food products
available to obtain.

Advertising is one thing and education is another. We
have three women employed by the California Dairy Council
in home economics and the practical conduct of a
family in the way of food with nutritive elements.
Each teach the broad problem of nutrition in California
to the home, the schools and before parent teachers
associations and clubs. The ice cream industry would do
well to harmonize their efforts in a like direction and co-
operate with the dairy industry."

(To be continued next month.)

SECRETARY QUINKER FALLS FOR CO-OPERATION

Longhorns,
everywhere in U. S. A.

Suppliesmen:

that we are all back at the helm, the writer
also thank the Texas Longhorns for the confidence
and friendly spirit exhibited in making me your secre-
tary for 1923-24 during the recent Galveston
convention. I shall serve you to the best of my ability and
co-operate with our officers and those of the Texas
Longhorn manufacturers in making the 1924 conven-
tion held in Dallas the greatest success possible.
Please bear in mind, however, officers can't win bat-
tles; the rank and file must hold up their end.
Therefore, each of you are most earnestly called on to
support and sponsor our efforts between now and next

as salesmen and factory representatives we are
friendly and capable of doing much good for one
another therefore let's pull together. When we have
the opportunity to speak a good word for the other
for his merchandise and get in touch with him for
specimens, let's do it. The writer is with you so let's
and by all means think, talk and boost the 1924
convention to be held at Dallas where show room for
and lobby room for booking will be galore.
There will be new paraphernalia ready for some real
fun for the White Caps in Dallas in 1924.

Cordially,

SHERWOOD L. QUINKER,
Secretary Texas Longhorns.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

Illinois Association Holds Record Convention

Attendance of About 250 at Chicago Meeting, Which Was Further
Featured by Splendid Program

A RECORD attendance and a remarkably instructive convention program featured the twenty-fourth annual convention of the Illinois Association of Ice Cream Manufacturers, held December 11 and 12 at Hotel Sherman, Chicago.

The attendance was a startling feature. There were 156 manufacturers and 71 supplymen, for a total registration of 227. This does not include about 40 people who failed to register.

Following the last speech on the program delegates went away saying nice things about Secretary N. Loewenstein's ability in framing a program. The subjects linked up, were timely, were vital to the manufacturer, and were handled by men who knew their ground.

Among the outstanding speeches were those of three college professors—Prof. H. A. Ruehe, Prof. A. S. Ambrose and Prof. P. H. Tracy of the University of Illinois.

"Factors Which Influence Quality in Ice Cream" was the topic of Prof. Ruehe, who held his audience's closest attention while he discussed this important subject.

"There is no food product that is more variable than ice cream," he said. "Not only does its chemical composition and food value vary greatly, but its physical makeup and palatability also vary. If this industry as an industry is going to prosper, those engaged in it must do their utmost to make the name 'ice cream' mean something."

He then proceeded to answer the question, "What Constitutes Quality in Ice Cream?" first showing the score card in use in his dairy school, and then showing how the score card sets definite values to the various characteristics that go to make a good product.

Extracts from his speech would give nothing of his complete line of thought on this subject, and for this reason it will not be commented on further here, as it will be published in full in an early issue of The Ice Cream Review, as also the addresses of Profs. Ambrose and Tracy.

Delegates were formally welcomed by R. A. Woodbull of Chicago, the first president of the Illinois Association of Ice Cream Manufacturers. The response was by George Thompson, president of Chicago. The report of the secretary-treasurer showed a balance on hand of \$131.97. He reported 104 active members and 56 associate members.

Convention President L. W. Roszell of the J. D. Roszell Co., Chicago, in his annual message, told of the distinct advantage his association has over newer and less mature organizations "in years of active, virile association work behind us."

He attributed the accomplishments of the association to "a pretty general spirit of unanimity in all of the problems we have been called upon to face." He said the splendid attendance at the convention indicated continued interest and support. He was proud of the

showing members of the Illinois association at the national convention, stating that 40 Illinois manufacturers were present at the Illinois association convention at Cleveland.

With these introductory remarks, the president reviewed problems arising during the past year, saying, in part, as follows:

President's Remarks.

"Those problems most vitally affecting manufacture of ice cream in the past season were pretty much the same as in 1923. The serious question of maintaining production volume and the holding down of overhead expenses, the question of meeting competitive conditions brought about by novices in the business who were not familiar with the question of improving methods of production, the quality of your finished product—all of these were apparent in 1923 operations not to any lesser degree than in previous years.

"I believe the question of maintaining production volume was even of greater seriousness in 1923 than in 1922. I think it has been the experience of manufacturers throughout the state that the general downward of ice cream business in August is hard to account for. I am sure that we all had pretty much the same experience in the matter of gallonage dropping off and that the factories who showed any material increase in volume of production in 1923 are indeed fortunate.

"The question of accounting costs, I believe, is the most important issue facing the ice cream manufacturer. The National association have taken action on the matter of uniform cost finding at the Cleveland convention vote of \$10,000.00 to establish a uniform cost accounting system for ice cream manufacturers. When the system of the National association is in proper shape I hope to see the ice cream manufacturers of Illinois take action to avail themselves, through our state organization, of the results that will no doubt be obtainable.

"Until we know our costs accurately there is going to continue to be difficulty in overcoming many of the problems that are

confronting us today and have confronted us for years and will continue to confront us until we know the cost of a pound of ice cream delivered into the hands of our customer and the money for it in the bank. The adoption by the National association of a policy of working out this cost problem is a great forward step in the ice cream industry and is going to give the opportunity to every manufacturer to avail himself of an expert, sound, practical basis upon which to figure costs. As I understand the arrangement, it is not a system of endless red tape and requiring the discard of your present system of keeping books but is to be worked out on broad, practical lines that will be applicable to the average ice cream business. I cannot, therefore, too strongly urge you as individuals and as an association to avail yourself of this cost finding program of the National and to avail yourself of the opportunity I am sure it will afford you to bring down your costs.

Zone Meetings Important.

"The matter of continued activity in zone meetings I desire to call to your attention. Essentially an Illinois zone meetings have proven to be of inestimable value to ice cream manufacturers in this state. Carrying on this work and disseminating organization information into the ways and byways of the state that could not in any other way be reached, you have one of the most important functions of this association productive of practical, far-reaching results.

Space does not permit of publishing the speeches of the convention, but these shall appear in subsequent issues of The Ice Cream Review.

New Officers

President, Z. G. Gassman, Olney.

Vice-President, John Cherry, Danville.

Secretary, N. Loewenstein.

Treasurer, Ed. Joehl, Alton.

Members Executive Committee: Edward Klinenberg, Chicago; George E. Thompson, Chicago; and Lyle W. Roszell, Peoria. National Director, E. W. Holmes, Manteno.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

CONVENTION HONORS.

Two members of the Illinois association were honored at the close of the convention. Retiring president L. W. Roszell was presented with a life. W. A. Schwindeler, who leaves Illinois this month to enter business at St. Louis, was presented with a watch and chain in recognition of his past efforts in the interest of the association and the industry of his state.

TRAGED OVER SURVEY OF ICE CREAM TRADE.

The Ice Cream Review: recently completing a 7,000 mile automobile trip through New England, through New York state, Pennsylvania, Ohio, Indiana, Michigan and Illinois, the business and mental attitude of the ice cream manufacturers is of some consideration.

The ice cream business during the past season has been better than the weather, in other words, the weather has been medium fair and the business fairly good.

In reviewing the past season from the standpoint of sales, it is safe to say that sunshine did not have as much to do with the gallonage this year as in preceding years, with the possible exception of the month of June.

It is unfortunate that many business men while knowing their own business to be on a firm basis, still are pessimistic on account of what is happening or at least they think is happening to some of the other businesses.

With a few local exceptions, practically every line of business has been in a healthy condition and certainly this is true of the ice cream industry as a whole.

In those places where competition has been severe the general complaints are, excessive credit to the dealer and liberal supply of fountains or other inducements to the dealer and as a result, a somewhat unhealthy condition of earnings on the part of the manufacturer.

In all, the ice cream manufacturer will start the 1924 with healthy prospects and it is simply a question of administration and sunshine.

DAIRY COUNCIL VISITS COLONIAL PLANT.

The International Dairy Council representing men of various nations of the world, were escorted through the plant of the Colonial Ice Cream Company on its visit to Philadelphia.

The visit was on the occasion of the World's Dairy Congress. The delegation was received and welcomed by J. Gruenwald, general manager and vice-president of the Colonial Ice Cream Company. Messrs. Toole and J. J. J. guided the party through the various departments of the plant.

The visitors were greatly impressed with the vastness of the plant, its utter cleanliness and the tremendous output of ice cream. After being treated to the Colonial Ice Cream Brick, they said it was delicious and unanimously named it as being among the best ice cream they had ever tasted. Smokes were passed out.

The delegates were particularly impressed by the Colonial's leadership in educating the people to the value of an ice cream as an all year food for a healthy diet.

PUT Yourself in the Consumer's Place

IF YOU ran a party and when digging out the ice cream you would scrape against one rust spot after another, what would you say of your ice cream man who has been "telling the world" about his sanitary methods?

It's ten to one he would be lucky to rate 50% of par on his sanitation arguments thereafter.

Allen's One Piece Sanitary Can Liners Make the Contents Look Inviting

Now contrast this everyday occurrence with a customer taking ice cream from a can with an Allen Can Liner. The can looks inviting all the way to the very bottom.

The wear your can shows makes no impression.

Allen Can Liners give you more use from all your cans and build good will.

You can build a better business by using Allen One-Piece Sanitary Can Liners.

Arkansas Association Takes High Rank in Progressive Work

Code of Ethics Adopted at Fifth Annual Convention at Little Rock, December 3, Following Important Legislative Victories During Past Year. R. L. Hargrove is New President

ARKANSAS takes its place among the states leading the way in the development of the ice cream industry as a result of progressive action at the sixth annual convention of the Arkansas Ice Cream Manufacturers' Association at Hotel Marion, Little Rock, December 3.

Adoption of a code of ethics governing the business policies and practices of its members was the outstanding feature of the convention, which was further marked by the enthusiasm of the delegates. Many matters important to the industry in that state were discussed.

In addition to the code of ethics, which is a serious effort to put Arkansas manufacturers under strong moral obligations to uphold fair practices in business, the association further asserted its claim to being one of the industry's most progressive organizations by working out plans to combat ill-advised legislation that would strike at the ice cream manufacturing industry of that state. During the months preceding the convention the association was hard at work with efforts to put over a pasteurization law. Success came just before the convention. At the same time the association had the hardest kind of a fight on its hand to overcome efforts to put a stringent tax on ice cream and soft drinks. This fight threatens to come up again, as the Arkansas legislature has some ambitious plans of its own for the upbuilding of the state. The legislators, well meaning though they may be, will find the Arkansas association ready to contest the point that ice cream can be classified as a luxury and taxed under the same plan as that proposed for soft drinks.

These are impressions gathered from the Arkansas convention, which preceded by one day the opening of the Southern convention. The delegates wasted no time in discussing plans to make their visitors from other Southern states feel at home in Little Rock. But they already had worked out their entertainment plans, and there was little delay in getting down to conditions confronting the industry in their own state.

Effective Work Done By Association.

Delegates expressed themselves as highly pleased with the work that had been possible for the past year through co-operative effort, but they were warned against willingness to rest upon these laurels.

In fighting the proposed unfavorable legislation during the past year the ice cream manufacturers joined hands with the soda water bottlers of the state. It was

the sentiment of the annual convention that the ice cream industry should not join the soda water in this work again, different speakers pointing out they could not speak for soft drinks as a food but ice cream is known to be "a food commodity of the hearth and home of the American people."

Approximately 40 or 50 delegates attended the sessions of the association. The principal business found members very enthusiastic in bringing up and discussing problems. Visitors who have attended conventions in the ice cream industry in all parts of the country were much impressed with the spirit of the convention. Different visitors characterized the Arkansas meeting as one of the best state conventions

the entire industry.

Tributes To Officers

The convention was marked by tributes to the officers who had brought about so many good results for the Arkansas ice cream industry by their energetic efforts in the past several years. Resolutions expressing the appreciation of the entire membership for the loyal work of A. Meyer of Stuttgart, who resigned as secretary after serving four very useful years at this post. Meyer was promoted to vice president and he would not consider his resignation.

Retiring President E. A. Watson of Little Rock was thanked for resolutions adopted as also other members

of the association. Pledges of their best efforts were made in speeches by President-elect R. L. Hargrove of Texarkana, and Secretary-elect Charles Hooberry of Pine Bluff. The secretary's report expressed the association's appreciation of the co-operation of The Ice Cream Review.

Among outstanding figures at the convention were former President "Will" A. Terry of Little Rock; George F. Cress of Prescott; W. L. Hewgley of Hot Springs; F. T. Watson of Little Rock; George Rumrill of Little Rock; P. C. of Paragould; I. O. Hughes of Jonesboro, Thurston of Paragould, and J. D. Purdy of Newport.

Convention President E. A. Watson called the convention to order at 11 o'clock Monday morning, December 3. The minutes of the last meeting were read and adopted, as also the treasurer's report.

SECRETARY'S REPORT By G. A. Meyer.

The Arkansas Ice Cream Manufacturers' Association has proven itself a real benefit and a large factor to the ice cream industry in this state for the past season.

SAYS REVIEW'S INTEREST HELPS.

Tacoma, Wash., December 14, 1923.

Editor, The Ice Cream Review:

At the eighth annual convention of the Pacific
Ice Cream Manufacturers' Association, held at
Vancouver, B. C., the following resolution was
passed:

"WHEREAS, The Ice Cream Review has
taken a keen interest in the development work
of our association, therefore be it

"RESOLVED, That our association thank
The Ice Cream Review most heartily."

Yours very truly,
PACIFIC ICE CREAM MANUFACTURERS'
ASSOCIATION,
Bert H. Walker, Secretary-Treasurer.

BENHAM ICE CREAM COMPANY MAKING EX- TENSIVE IMPROVEMENTS.

The Benham Ice Cream Company is making improve-
ments in its three ice cream plants. They are building
a large garage adjacent to their ice cream factory and
are also adding a new hardening room and adding an-
other forty ton compressor to the Fresno, California,
plant.

At Merced, California, they are building an apart-
ment, adjacent to the factory for the housing of the
manager and his family. They are also doubling the
size of the plant at Visalia, California.

THE ICE CREAM REVIEW COVERS AMERICA LIKE THE DEW.

Truck Operating Costs

(Continued from December issue)

Relative Importance of Cost Items.

It is desirable that truck operators understand the relative importance of their operating cost items in order that they may intelligently approach the problem of reducing costs. The following table shows approximately the relative rank of the cost items for a 5 ton gasoline truck. Of course, there will be slight variations in this ranking for trucks under different operating conditions.

Table No. 2—Relative Importance of Operating Cost Items for a 5 Ton Gasoline Truck.

Rank	Cost Item	Per Cent of Total Cost
1	Depreciation	20.0
2	Repairs and overhaul.....	19.3
3	Drivers' wages	18.7
4	Gasoline	12.8
5	Tires	8.6
6	Overhead	6.6
7	Insurance	4.7
8	Interest	2.9
9	Garage	2.7
10	Taxes	1.7
11	Lubricants	1.6
12	License4
	Total	100.0

Two of the largest items of cost, as shown above, are depreciated and drivers' wages, yet many one-truck operators establish their hauling rates without considering these items at all.

The fixed charges in this table total about 38 per cent. With this fact in mind the loss due to idle time can readily be visualized. Fixed charges continue whether the truck is operating or not and the truck operating the most time will render greatest returns, other conditions being equal.

Analysis of Factors Governing Motor Truck Operating Costs.

There are four principal methods by which truck operating costs are figured, namely, cost per mile, cost

per day, cost per unit (ton, box, bag, gallon, barrel, other similar units) and cost per unit mile (ton per gallon mile, etc.). A great deal of confusion has resulted in the past through comparison of operating costs without considering the variable factors which increase or decrease costs on these various bases.

The following table shows how these four items vary through an increase in the factors listed in the first column. It is assumed of course, that operating conditions are equal.

Table No. 3—Variations of Cost Items.

Variable Factors	Cost per Mile	Cost per Day	Cost per Unit	Cost per Unit Mile
Increase in daily mileage.....	Decrease	Increase	Increase	Decrease
Increase in truck capacity	Increase	Increase	Decrease	Decrease

In discussing these four cost bases it must be remembered that the daily fixed costs are constant regardless of mileage, while the dairy variable costs increase with an increase in mileage.

Cost per Mile.

The "cost per mile" varies with the miles operated per day. Obviously this cost will decrease as the daily mileage increases. The variable costs per mile should be practically the same whether the truck travels 10 miles or 50 miles in a day. But the fixed costs will be divided among a greater number of miles in the latter case, thereby reducing the total "cost per mile" under the latter condition. It would be if only 10 miles were traveled. A five-ton truck operating 50 miles per day may have a smaller "cost per mile" than a three-ton truck operating ten miles per day. However, an increase in truck capacity on the same daily mileage would naturally increase the "cost per mile."

Cost per Day.

The "cost per day" will vary with the miles operated per day. It is quite evident that this daily cost will increase as the daily mileage increases. To the daily fixed charges must be added the daily variable charges.

Dixie Flyers and Southern Ice Cream Manufacturers.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

course, increase with the mileage, thereby the "cost per day."

Comparing operating costs of different sized trucks on the "cost per day basis" it is essential that the mileage of each truck be known. It can be seen that a five ton truck operating only 100 days a year should have a lower "cost per day" than a three-ton truck operating fifty miles daily under similar conditions.

"Cost per day" is affected also by the total number of days in the year that the truck is in actual operation and by the number of miles run in the average day. It is commonly assumed that a truck will run 300 days a year, neglecting Sundays and holidays. In most cases this is much too high. Due to such factors as weather conditions, accidents, strikes, variations in business demands, etc., this assumed total of operating days is frequently cut to 200 or less. Assuming yearly fixed charges of \$1,800 on a 300 day year would give a daily fixed charge of \$6.00. But if the truck operates only 200 days out of the year, the daily charge will be \$9.00 per day. This increase will be reflected in the "cost per mile."

Cost per Unit.

If mileage records are not kept, truck operators can be content with operating cost on the "cost per day basis." The unit will vary with the kind of cargo involved. This unit may be tons, gallons, bushels, or of livestock, etc.

"Cost per unit" will increase as the average haulage increases. It is obvious that a ton hauled 10 miles will cost more than a ton hauled one mile under the same conditions. There is very little difference in fixed costs for each of the sizes of heavy trucks since the variable costs on the various sizes increase in direct ratio with increase in size, the "cost per unit" will vary with the truck capacity. The "cost per unit" will decrease with an increase in truck capacity and will increase as the average haulage increases.

Cost per Unit-Mile.

Plans of comparing operating costs of different trucks there is probably no better basis than that

of the "cost per unit-mile." This is commonly worked out on the ton-mile basis. It involves a record of units hauled and mileage covered. Costs by this method will vary with the truck capacity and the daily mileage. This "unit-mile cost" will decrease both with an increase in truck capacity and with an increase in daily mileage. A five-ton truck loaded to capacity will give a lower "unit-mile cost" when operating forty miles daily than when operating only twenty miles daily. Likewise a five-ton truck loaded to capacity and operating twenty miles daily should give a lower "unit-mile cost" than a three-ton truck with capacity load covering the same mileage. Large truck capacity and high daily mileage tends to produce lower costs per unit mile.

Apparently there is a great variation in the methods used in arriving at the "unit-mile" or, as it is commonly figured, the "ton-mile" cost. This involves not only a record of total tonnage and total mileage, but also a record of the number of trips.

During the war one of our large motor truck companies sent out a circular letter on operating costs to their sales representatives in which instructions were given to figure total cost per ton mile by dividing total cost per day by the number of miles driven times the number of tons carried. This apparently is the method frequently employed, but it leads to serious inaccuracies as can be easily illustrated.

Assume that a truck starts from point A and during the day makes stops at points B, C, D, and E respectively, covering distances and carrying loads as follows:

Table No. 4—Trip-Mile-Ton Table.

Trip	Miles	Tons
A—B	10	4
B—C	5	1
C—D	5	2
D—E	10	3
Totals 4	30	10

By the method outlined in the sales letter the ton-miles would be $30 \times 10 = 300$. Actually the ton-miles would be:

Table No. 5.

Trip 1.....	$10 \times 4 = 40$ ton miles
Trip 2.....	$5 \times 1 = 5$ ton miles
Trip 3.....	$5 \times 2 = 10$ ton miles
Trip 4.....	$10 \times 3 = 30$ ton miles
Total	85 ton miles.

(To be concluded in February issue)

At Annual Convention at Little Rock Last Month.

MOJONNIER BROTHERS COMPANY'S NEW FACTORY.

The new plant of the Mojonnier Bros. Company is located at 4601 West Ohio Street, Chicago. This is about four miles west and one mile north of their former location.

In speaking about their new home, Mr. T. Mojonnier had this to say: "The new plant is located upon the Belt Railway, which insures prompt service, both upon incoming and outgoing shipments. The Belt Railway

This daylight factory, equipped with all modern devices will enable the company to receive and expeditiously handle their products, and the working conditions are ideal for their employees, of health, contentment and a high quality of work and it is claimed that the aim has been to provide a facility that would help to improve the quality of their products, and the company's service to its customers in nearly all parts of the world.

New Home of Mojonnier Bros. Co. at 4601-4621 West Ohio Street, Chicago.

has daily switching connections with all the trunk lines entering the city. Chicago's unsurpassed shipping facilities is probably the largest single factor that has made it the leading commercial city of this country. The above location placed these exceptional facilities at the immediate command of the company."

The management is grateful to its customers for their confidence, both in the personnel and in the products of the company, has made the present expansion possible. Customers and friends are cordially invited to visit their new plant.

AFFILIATION OF HYDROX CORPORATION AND RIECK-McJUNKIN DAIRY COMPANY.

Announcement has been made of the affiliation of interests of the Hydrox Corporation and the Rieck-McJunkin Dairy Company of Pittsburgh.

Common stock of both Hydrox and Rieck-McJunkin has been put into a holding company known as the National Dairy Products Corporation. The stock of the holding company will be offered for sale by Goldman, Sachs & Co., Lehman Brothers, and Toby and Kirk, and the plan is to pay an annual dividend of \$3.00 per share. On the basis at which the stock is offered, a yield of better than 9 per cent will be realized.

The management of the Hydrox Corporation will remain the same. So, too, will the management of Rieck-McJunkin Dairy Company. Mr. Rieck, president of Rieck-McJunkin, is chairman of the board of directors of the National Dairy Products Corporation, and Mr.

McInnerney, president of Hydrox Corporation, is president of the National Dairy Products Corporation.

This affiliation joins the interests of two of the largest organizations in the dairy industry, as the Rieck-McJunkin Dairy Company is the most important of its kind in western Pennsylvania territory.

ENGLAND'S ICE CREAM GALLONAGE

London—About 20,000,000 gallons of ice cream were sold in England during the summer of 1920, 19 times more than the quantity sold in the boom year of 1919, said Robert G. Reid in the course of a paper read before the British Cold Storage and Ice Association.

The expansion, Mr. Reid said, concurrent with the introduction of American method of manufacture, fostered by the changing attitude toward artificial ice cream, and the fact that ice cream is nourishing and digestible.

REFRIGERATING MACHINE.

Ice cream manufacturers will be interested in the announcement of the Refrigo Corporation, Milwaukee, that it is manufacturing an automatic refrigerating machine, priced and especially adapted to refrigerate ice cream tanks.

Ammonia cold storage machines have long been successful in securing a complete commercial success. The Refrigo Corporation is constructing a small ammonia machine that it will be successful.

The company claims that it is making the smallest successful ammonia machine in the world.

The most serious objection heretofore to the use of ammonia refrigerating machines has been the escaping

through the driving mechanism of the compressor. It is now for the first time entirely overcome by an automatic and leak-proof seal, officials of the company claim. It is said that this represents one of the most important and far reaching achievements made in recent

years on this machine and on which the company places great stress is that its installation requires no special foundation of ice cream cabinet. It can be placed beside or in the basement, thus saving valuable floor

space. The machine has a refrigerating capacity equal to 200 tons of ice per day. It is said to operate silently and efficiently and at a nominal cost. By combining two compressors on a single base the refrigerating capacity is more than doubled without doubling the cost, it is

claimed. The machine is marketed under the registered trade name of Refrigo. The company has issued an interesting booklet on the subject of automatic refrigeration for ice cream cabinets. By mentioning The Ice Cream Review it may be had on request.

The Refrigo Corporation has its general offices and factory at Forest Home Avenue, Milwaukee, Wis.

Delegates to the convention of the Association of Ice Cream Manufacturers of New York State, held at Rochester, N. Y., December 5 and 6, made a special visit to the plant of The Pfaunder Co., makers of glass lined steel equipment, located there. The entire delegation which consisted of about 150 members was shown through the plant in logical sequence so that it was possible to trace the fabrication of the glass lined tank from the initial process and finally to the assembling room where fittings such as spray coils, flush valves, etc., are placed upon the tanks. The entire convention and gathering also visited the Taylor Instrument Company's plant while in Rochester.

* * *

The Hershey Chocolate Co., Hershey, Pa., announces that it has completed one of the best years in its history. The company recently announced the addition to its staff of Frank F. Mulkey, widely known in the ice cream supply industry. Mr. Mulkey operates from Chicago.

* * *

Black walnut ice cream made with Jo-Lo black walnut emulsion is "an up-to-date live wire specialty feature," according to the Joe Low Co., Inc., importers and manufacturers, with offices in Brooklyn, Chicago, Los Angeles and Toronto. The company also supplies "Sunshine" milk powder, flavoring extracts and emulsions, Supreme imported gelatine, certified food colors, gums, ice cream ripener, vanilla extract and Swiss cocoa. Leading manufacturers throughout the country, together with agricultural colleges, advocate the use of certified yolk in ice cream, according to the Joe Low Co. Directions are given in pamphlets issued by the company. Anton Rief represents the company in the Middle West. At the recent Southern convention the company announced that for the convenience of Southern ice cream manufacturers, "Sunshine" milk powder has been made available in Little Rock, where a fresh stock is always on hand.

* * *

Years of practical experience in repairing and remodeling ice cream cabinets and in studying and developing ice cream refrigeration have fitted the Brooks Cabinet Company of Norfolk, Va., to produce the Brooks cabinet. They have an interesting slogan to work under—"A master cabinet by master builders." The exterior of all Brooks' cabinets is said to be of finest gulf cypress. The cypress grows in the swamp-waters of Louisiana and Florida and is excellent for refrigeration purposes. The cabinets are made with solid panels, not veneered, of finest selected gulf cypress backed by pure cork insulation made air tight with heavy coats of asphaltum and the best water-proof insulating paper, it is claimed. The tubs are made of lasting Virginia white cedar or heavily galvanized sheet steel tanks. The solid cypress panels are mortised, glue-set and screwed into sturdy corner posts braced with strong angle irons and are most attractive in appearance when finished, as the beautifully grained cypress is finished in mahogany, officials say. The cabinet tops are fitted with a special molding preventing air passage between top and case. Drain pipes and faucets are of solid brass; faucets flanged and securely screwed to finished cabinet and the bottoms of the cabinets are easily removed if necessary. Officials believe this workmanship, material and construction combine to make the Brooks "a master cabinet."

* * *

THE KRUSE-WIERK MANUFACTURING COMPANY.

Realization of the shortcomings of the old type soldered and riveted milk can and the fact that a better can was not to be had, led to the establishing of the above company as "builders of a better and much improved type of milk can."

The two men back of this new enterprise have been identified with both the dairy industry and the sheet metal business for more than 30 years. August M. Kruse, being one of the originators of the American Steel Package Co. of Defiance, Ohio, and for many years the production manager of

OUR ADVERTISERS ARE YOUR FRIENDS—BUY FROM THEM.

that company, specializing on the production of the "All-Weld" steel oil barrels. John M. Wierk was actively connected with the Empire State Dairy Co. of New York for over 30 years and secretary of that company, starting in business with his father, John P. Wierk, who was one of the pioneers of the dairy business and well known to the trade. After working on the welded type of milk can, he retired from the dairy activities, retaining however his interest in the business of the old company and is still a director. He went to Defiance and with Mr. Kruse obtained a patent on their present type of can. Property was bought, a plant was erected for the manufacture of this can.

They have put all their combined experience and knowledge into this new can and "know that it is absolutely the last word in milk can construction." The can is built to last and give service. This service they further guarantee in the matter of retinning and keeping them in shape, making a charge of about one dollar each at their factory. To more fully appreciate the merits of their can it must be seen and the company will be very glad to supply a sample can upon request.

A booklet has been issued, "Facts Worth Knowing About Milk Cans." It will be sent to all those interested together with further information, by writing them.

SINCLAIR BOOKLET GIVES INTERESTING FACTS.

A national habit of cleanliness typical of the Holland is associated with the quality of Delft gelatin according to members of the staff of Harold A. Sinclair Broadway, New York, who sells Delft gelatin to the can ice cream industry.

The claim made that this product is the "world's best food gelatin, with quality a concrete fact," is based upon the proverbial love of the Hollanders for purity, which is said to be extended to all branches of industry.

"This is particularly true," reads a passage from a booklet entitled "The Story of Delft," recently issued by the Sinclair office—"This is particularly true of the plant Lijm-en-Gelatine, Fabriek-Delft, where Delft gelatin is made, one of the largest and most efficient in the world.

Its research laboratory has no equal, says the booklet, pointing out another basis of merit. It proceeds to give a brief description of the scientific manufacture to overcome the extreme difficulty of converting the natural gelatin bone into the finished product.

"The operation of making gelatin occupies a period of month to six weeks, continuously day and night. The materials are treated in the vat for many days with a solution of pure muriatic acid, to remove the mineral matter such as phosphate of lime, magnesia and carbonate of lime, leaving the gelatin-bearing material intact. When the matter is dissolved, the material is washed again with pure filtered water.

"The stock is then treated many times with lime to remove any fats that may be present, lessens the viscosity of the gelatin and purifying it. Then the stock is washed many times and is put into the boiling vat. Under co

Bird's-eye View of the Delft Works.

controlled temperature the stock is boiled, which expels the gelatin. This stock undergoes successive boilings, exceeding one under higher temperatures. As each run the gelatin rises to the top and is drawn off. The stock always is the strongest, each successive run showing less strength.

"The drawing off is transferred to vats in a cool room where the thin mass congeals. It is then cut into sheets and placed on nets over wooden frames. These frames are placed in a long alley into which is introduced a strong current of dry air. This removes the greater part of the moisture. Then the sheets go into the grinder, from which the granulated gelatin, ready for use.

"The process is now completed, except for the work of testing and grading. Each run is tested by chemists, independently, for chemicals and bacteria. That any errors or carelessness in the operation may be covered, these tests are carefully checked. The plant has higher standards for purity, strength and bacteriology. U. S. food laws require, to which the product of every run conforms. When the results are verified, the granulated gelatin and the ground gelatin packed into tight barrels in a cool room for storage."

The booklet then takes up the strange situation which makes it impossible to classify the ice cream industry as a whole regarding advice on buying gelatin. A professional grade for a manufacturer in Seattle, for instance, is not do for a New Orleans manufacturer, the booklet points out, even though all ice cream manufacturers require gelatin for the same purposes—as a binder, smoother, and stabilizer. Reasons for this are varying degrees of climatic conditions, mix conditions and selling conditions.

It is pointed out that a weaker gelatin can be

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

where the summer heat is moderate, never above 80 degrees, at which time a manufacturer can use a weaker gelatine with satisfactory results. Where the heat is excessive, the strongest gelatine is required, we are told, the thing caused ice cream by heat making the mass slump. The booklet then continues this discussion of what it is "a fact not generally known," declaring that—

real strong gelatine will hold up ice cream after it is better than any other one thing. The stronger it is, the better will the ice cream hold up. In the mix the total solids content is above 35, a weaker gelatine can be used—aside from climatic sales conditions. The lower the total solids content, the stronger should be the gelatine. Let us qualify this statement a bit, for fear it may be mislaid. If you make a mix high in solids and sugar condensed in large proportions, you will get "sandy" cream, which we hear so much about. In this case, a super-gelatine in larger quantities must be used. Recent ex-

The City of Delft.

periments have shown that even a great proportion of sandiness caused by milk sugar in excess, mainly, can be overcome using five ounces of a very strong gelatine. A weak gelatine cannot stop five per cent of sandiness under these conditions. A super-strong gelatine can stop seventy-five per cent.

Preparing Gelatine For Ice Cream.

In many years gelatine has been prepared with little variation in ice cream plants, and the method generally employed is the best of the best results. In small plants the gelatine is weighed for the batch; then it was soaked in cold water for thirty minutes; then the can containing the gelatine was immersed in a cold water bath and the steam hose was run in. While the water is being heated, the dissolving is stirred. When showing clear and with no lumps or clots, the gelatine is known to be ready for the mix. The variation has been dissolving in warmed milk in order not to change the standard of the mix. So far this crude method is all right if the temperature of the bath has not risen 160 degrees.

In large plants have used a double kettle or special gelatinizer, in order to save time. This too has been all right. The gelatine liquid has been poured into a vat of cold water. A wrong method has been pursued, for an incomplete dissolution has resulted. The warm gelatine should be put in the warm mix just after pasteurization has been completed. Then the run through the home, the gelatine can do its work, and it will be distributed evenly throughout the mix. The new idea of pasteurizing and homogenizing the whole mix brought up another question in preparing gelatine. As it seemed to be a sharp difference in opinion among gelatinists, the only way to settle it was to go through a series of experiments. The problem is now settled. When the pasteurizer is filled with the mix ingredients, and cold, sprinkle the required amount of dry gelatine on the five fifteen minutes for the gelatine to soak before turning the steam. The agitation, of course, will aid in soaking with the coil or paddle of the pasteurizer working, the soaking can be cut down to five minutes. The gradual agitation applied in the pasteurizer will give a perfect working for the gelatine. There can be no doubt that this is the ideal method in plants for introducing gelatine and the full value of the will be extracted."

* * *

U. S. AUTOMATIC FREEZING CONTROL AND RECORDER.

One of the features at both the National Dairy Show at Chicago and the National Ice Cream Exposition at Cleveland was the new U. S. Automatic freezing control and recorder.

This device is electrically operated, and can be connected to motor on motor driven machines, or to any other electric power or lighting circuit. It automatically shuts off the brine when the mix inside the freezer has been cooled to a certain temperature, the point of shut off being set by the operator. As soon as the brine is shut off, the electric lamp shown on the top of the instrument, thus letting the operator know that the mix has been frozen to the right temperature and is whipped.

On the circular dial of the instrument on which the lamp is mounted, a complete record is made on a chart, showing the time and temperature at which the mix enters the freezer, the minimum temper-

No Weakness Can Hide from the BUZZ SAW

If a sheet of Non-Plus-Ultra Pure Corkboard were not baked through the center to liberate the natural gum which is necessary to securely cement the cork granules together, the buzz saw would reveal it instantly—and into the scrap heap it would go. For this corkboard is moulded and baked in 24" sheets, 4" thick, then sawed through the center for 2" thick sheets and again sawed in half to make sheets 12" wide. Thus the inside of the sheet, when baked, is exposed in

Non - Plus - Ultra Pure Corkboard

That safeguards you against weak sheets of corkboard—sheets without proper structural strength to withstand freezing, thawing and rough handling.

No other corkboard is cut from larger sheets. Hence no other make gives you the positive, **visual evidence of durability.**

The labor cost of installing is the biggest cost of insulation. And it costs no more to install Non-Plus-Ultra than corkboard which will disintegrate quickly.

We've some other interesting facts to tell you. Write for full information and prices.

CORK IMPORT CORP.

BRANCHES IN LARGE CITIES

REMEMBER THE DATES FOR YOUR STATE CONVENTION—AND BE THERE.

ature to which it is frozen, the time required to freeze each batch, and the number of batches for any given time.

Any ice cream manufacturer can thus see at a glance, what has been going on in the freezing room all during the working day. He can improve his product and cut down manufacturing costs by comparing these records from day

to day as various changes are made to increase production and improve quality.

Many visitors saw this apparatus demonstrated during the conventions, and it is generally acknowledged to be one of the most important advantages in ice cream manufacturing, according to officials of the company.

Those who cared to investigate, learned that the thermostat bulb is located inside of the freezer cylinder in such a way that it can easily be removed when the machine is cleaned. This controls the position of the recording pen over the circular chart. When a new batch is dropped into the freezer cylinder, the temperature in the cylinder rises. After the operator pulls open the brine valve by hand, the temperature begins to drop.

When the minimum temperature at which the apparatus is set to work is reached, the recording mechanism makes an electric contact which lifts a latch and releases a wheel on the brine valve spindle. This wheel is grooved to carry a flexible steel cord, at the end of which some weights are suspended. These can be seen in the left side of the illustration. These weights turn the brine valve to shut off the brine when the wheel is released by the electric latch just described. When the brine valve is closed, another electric contact permits the flow of electric current which lights the signal lamp for the operator.

TRADE LITERATURE.

The U. S. Freezer and Machine Corp. announces publication of their 1924 catalog. This catalog contains descriptions and illustrations of some twenty odd new ice cream plants using U. S. heavy duty freezers in various numbers and sizes besides many older installations. It has some very interesting cross sectional views showing the insides of ice cream freezers and parts, so that any ice cream manufacturer can see exactly how they are built. All new features and improvements are, of course, described in detail, and there are many interesting illustrations and descriptions of labor and time saving devices, some of which have never been offered before.

NEW CREAMERY PACKAGE BRANCH OFFICE AT LOS ANGELES, CALIFORNIA.

In order to better serve the rapidly growing dairy industry of Southern California, The Creamery Package Mfg. Company will open a new branch office and warehouse on January 1st, at 2461-2463 Porter St., Los Angeles, California.

The new quarters are very commodious and will have ample room for the display of representative pieces of CP equipment. There are ample quarters for office, shipping room, and warehouse space for equipment, supplies and repair parts.

It is a convenient location for visitors near Santa Anita Avenue, one of the through streets of the city, and only a short distance from all railroad stations.

The shipping room is located on a spur railroad track, affording the best facilities for handling orders promptly.

Visitors to Los Angeles are cordially invited to call at the new office, get acquainted and inspect the various pieces of equipment on display.

It's here!

SCOTCH BOB

BUTTER SCOTCH ICE CREAM

"Something New!" is the American public's insistent demand.

But mere newness is not enough! Butter Scotch Ice Cream is new—and yet its flavor is *not unknown* to the public. Everyone knows Butter Scotch—with its smooth, rich, buttery flavor. And *now* Scotch Bob makes possible Butter Scotch Ice Cream!

Old fashioned—yet new! Delicious—yet nutritious! A quality product—yet economical because it replaces three quarts in every ten gallon mix.

Make up 70 gallons of Butter Scotch Ice Cream from trial keg—cost only \$10.

Island Falls, Me.—The plant of the Eureka Ice Cream Co. recently was destroyed by fire. The loss is estimated at \$8,000 with no insurance. It was a well equipped factory and has been doing a good business. Owners were S. D. Spratt, John Webb, E. A. Young, and S. L. Small. They plan to rebuild.

Spring Valley, Mo.—S. P. Tracy has bought a building, two stories brick, 70 x 100 feet on corner of Main Avenue and McDaniel Street, and will make butter and ice cream. He also will manufacture some ice for his own use. There are two hardening rooms, each with shelf capacity of 1,000 gallons, large cold rooms and arrangements are being made for another hardening room. He expects to begin manufacturing ice cream and butter by February 1.

Middlesboro, Ky.—Machinery for the Butter Cup Ice Cream Co. has been installed in its new building on 19th Street. Officials expect to have the plant in operation the first of the year. The new plant when completed, will be one of the most up to date plants in the South, officials say. E. S. Eckrass, dairy specialist, is in charge as superintendent. He went to the company from Birmingham, Ala., where he was well known as an experienced general dairy expert.

Anderson, Ind.—Hoard Ice Cream Co., incorporated with a capital of \$20,000. Incorporators are Ora Hoard, Paul R. Hoard and Ada Hoard.

Wichita, Kan.—The Wichita Creamery Co. has purchased a lot 150 feet directly north of its first creamery and is contemplating putting up a modern ice cream plant, approximately 60 x 120 feet. It will be constructed of brick and will be one story high. Officials say that they contemplate equipping the building with modern up to date machinery. They believe it will be one of the best equipped plants in the Southwest. The building will cost in the neighborhood of \$15,000. Officials expect to install one new ice machine, and possibly two, and the necessary holding vats to handle and disburse 1,000 gallons of ice cream a day.

Monroe, Wis.—Blumer Products Company are putting up a building for the manufacture of ice cream in addition to their artificial ice and beverage plant. They have reorganized for \$150,000.

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

ERIC SCUDDER HEADS CITRUS PRODUCTS CO.

Eric Scudder is now president of Citrus Products Company, the firm which has been supplying "Ella" brand fruit flavors to ice cream manufacturers. Other officials believe this announcement will be of much interest to the ice cream industry because of the long experience of Mr. Scudder in the merchandising and advertising of ice cream and beverage flavors.

The change was made just prior to the Cleveland convention. Mr. Scudder, who was vice-president of McJunkin Advertising Company of Chicago, one of the largest advertising agencies in this country, took over the entire control and management of the Citrus Products Company. Associated with him in the enterprise are James L. Kraft, president of the Jas. L. Kraft & Bros. Co., largest manufacturers of cheese products in this country, and Charles H. Achelpohl, well-known to all ice cream manufacturers in this country who will be retained as manager of the ice cream division.

**ERIC SCUDDER.**

Few men in this country have been more widely engaged in the marketing of flavors for beverages and ice creams than Mr. Scudder. In his capacity as vice-president of McJunkin Advertising Company, he planned and handled for many years the advertising and merchandising for such well-known companies as Orange-Crush Company, The Good Grade Company, and the Chero Cola Company. In addition, he was for three years secretary of Orange-Crush Company, and was a prime mover in the launching of the "Crush" fruit flavors for ice cream, ices and sherbets.

He severed his connection with Orange-Crush Company a year ago. Since that time, Orange-Crush Company has sold out its ice cream department to Citrus Products Company, and the former "Crush" flavors have been marketed under the trademark "Ella."

In taking over the Citrus Products Company, one of the first moves of Mr. Scudder was to change the name "Ella" to "Kist." The company has owned the "Kist" trademark for many years and has successfully marketed under this mark several fruit flavors, including the well-known Orange Kist. Hereafter, all ice cream flavors will carry the surname "Kist" with the name of the flavor prefixed as "Orange-Kist," "Lemon-Kist," "Grape-Kist," etc.

Mr. Scudder informs The Ice Cream Review that every feature of the ice cream division will be placed and maintained upon the highest plane. A laboratory service, insuring quality control and research opportunity will be one of the important parts of the business.

The merchandising and advertising service, he says, will strike a new note in the ice cream industry.

**PERSONAL.**

Mr. Gunther, representing the Citrus Products Company of Chicago, dropped in on us for a visit lately. He said, "I'm traveling around among the ice cream folks might take it all in—and so I thought I'd drop in and see the Cream Review folks." He says that we have a nice firm. Mr. Gunther is a new man in the ice cream supply business and is going to travel the northwest part of the country for his firm.

ROBINSON AT CONVENTION.

Fred Robinson was among those present at the Cleveland convention, arriving late, but in time to see his friends.

The Morton Salt Co. exhibit at the convention of the Manufacturers of Dairy Products. This photo was taken by a Journal representative with a Brownie No. 3 kodak. Morton Company's representation of eleven men will be found on other page of this issue.

BOOSTERS**

MICHIGAN ALLIED DAIRY ASS'N

Dairy Booster Officers:

Pres., C. J. YUNKER
1112 Radcliffe Drive,
Toledo, Ohio.

Secy., C. J. W. SMITH
c/o Creamery Package
Mfg. Co., Detroit.

PREPARATIONS BEING MADE FOR MICHIGAN DAIRY SHOW.

The Michigan Dairy Show will be held at Kalamazoo, Mich., the week beginning February 4, 1924, according to recent announcement by officials of the Michigan Allied Dairy Association and the Michigan Dairy Boosters.

A record attendance is expected by association officials.

C. J. Yunker, president of the Michigan Dairy Boosters, says there is every indication that the annual exhibit will be larger this year than ever before, with more space and more representative exhibits. He says premiums will be offered.

The exhibit will be held in the Armory building at Kalamazoo. Tuesday evening, February 5, will be the opening night of the exhibit and will be a "get acquainted" occasion.

Mr. Yunker, who is connected with the Zipp Manufacturing Co., Cincinnati, O., promises that the banquet will be as good as any in the past. He says the Boosters' banquet will be "big as ever." The annual dance will be held Thursday evening, February 7, in the Masonic Temple.

The annual banquet of the Michigan Allied Dairy Association will be held the preceding evening. The men's banquet will be held the first evening of the show. Officers will be elected at that time.

* * *

The Michigan Allied Dairy Association and the Michigan Dairy Boosters will put on a bigger convention than ever, much larger and better exhibits at Kalamazoo, Mich., February 4-5-6-7-8, 1924, in the Armory building. The banquet will be a good one, and the Boosters' dance will be as ever. The show hour in the exhibition hall will be a lively affair.

To all you creamery managers, owners of co-operatives, creameries, buttermakers and ice cream manufacturers, come to this convention and let's see how large an attendance you can make by seeing this show.

We are growing fast and larger in our conventions, and you all can come and make it much larger.

So it's up to you to do your part.

* * *

The Michigan Allied Dairy Association and Michigan Dairy Boosters hereby extend invitations to all Ohio, Indiana and Illinois manufacturers of ice cream and dairy products to attend their next annual convention and exhibit at Kalamazoo, Mich., February 4-5-6-7-8, 1924, in Armory building. Make arrangements and let us hear from you a day or two with us. We can show you a great show. Why not be with us?

* * *

Let's all get together and attend the Kalamazoo convention. It's a great show and will please all.

(Continued on next page)

CHICAGO, ILL.

The exhibition hall at the Kalamazoo dairy convention will open and close as follows:

Tuesday, open at 9 A. M., close 9:30 P. M.
 Wednesday, open at 9 A. M., close 6 P. M.
 Thursday, open at 9 A. M., close 9:30 P. M.
 Friday, open at 9 A. M., close at 6 P. M.
 Special entertainment features in hall.

* * *

Tuesday evening will be opening night and get acquainted at exhibition hall (Armory building).

* * *

Every minute of the day and evenings will be lively show to please all.

* * *

The Michigan Allied Dairy Association will hold its annual banquet on Wednesday night, February 6, in the Masonic Temple, Kalamazoo, Mich., at 6 o'clock.

* * *

The Michigan Dairy Boosters will hold its annual dance on Thursday night, February 7, in Masonic Temple, Kalamazoo, Mich., at 9:30 o'clock.

* * *

Michigan Dairy Boosters will have their salesmen's banquet and election of officers on Monday night, February 4, at Kalamazoo, Mich., at 7 P. M., in Columbia Hotel.

BOOSTERS, ATTENTION!

Everyone look out for the February issue of The Ice Cream Review with full particulars in regard to coming convention at Kalamazoo. It will show you that it is going to be larger than ever.

C. J. YUNCKER, President,
 Michigan Dairy Boosters.

NEWS AND NOTES FROM MICHIGAN DAIRY BOOSTERS.

E. F. Granguar of Ashland Sanitary Dairy, Ashland, Ohio, was severely burned.

Ashland Sanitary Dairy, Ashland, Ohio, has installed a new 1,000 pound churn.

Fleming Ice Cream Co., Jackson, Mich., is making extensive improvements to their plant at a total cost of \$10,000.

Ann Arbor Dairy Co. of Ann Arbor, Mich., will soon begin the manufacture of ice cream.

The Kalamazoo local committee appointed by Yuncker, president of the Dairy Boosters, is now working and getting things all shaped up for another Boosters' big dance on Thursday night, February 7th at 9:00 P. M. at Masonic Temple.

All Michigan Dairy Boosters who expect to attend Kalamazoo show better make reservations. Park American Hotel will be headquarters for them, so look out for it.

Chas. Isaly of Isaly Dairy Co., Marion, Ohio, is in Canada hunting for deer.

Do not forget the convention at Kalamazoo, Mich., February 4 to 8—by all means attend it. It is going to be a hummer and one which will please all.

Look out for Boosters' doings at Kalamazoo show, February 4-5-6-7-8, 1924.

Defiance Ice Cream Co., Defiance, Ohio, will probably open a new plant at Fostoria, Ohio.

Standard Creamery Co., Van Wert, Ohio, is building a new plant.

R. L. Graham Ice Cream Co., Lima, Ohio, will soon move in their new building.

Findley Dairy Co., Findley, Ohio, will build a new plant.

Mr. Sager of Crestline, Ohio, has become the new manager of Chief Wells Dairy Co. plant at Marion, Ohio.

Isaly Dairy Co., Youngstown, Ohio, has opened another retail dairy store on Federal Street. It has a counter of 140 feet long, holding cabinets all the way across for ice cream, ices and sherbets. This company now operates five stores in Youngstown, and twenty others scattered in surrounding towns, in Niles, Warren, Salem, Ohio; Sharon and New Castle, Pa., and others. They have been very successful in all of their stores.

ICE CREAM TO BE MANUFACTURED BY UNIVERSAL MILK CO.

A big plant for the manufacture of ice is now being installed in the factory buildings of the Universal Milk Co. at Hillcrest, N. Y. About February 1, 1924, this company expects to begin the manufacture of ice cream. The product to be made by this firm will be marketed under the trade name "Nestle's Everyday Ice Cream."

Machinery and equipment for the various processes of manufacture are now being installed. The capacity of the ice cream manufacturing establishment will be limited only by the demand for the product, according to R. E. Minthorn, president of the company.

The artificial ice making plant will have a capacity of 50 tons a day at the beginning of operations. This may be increased later, it is said, as the demand for the product grows. The equipment is installed in units and additions may be made at any time.

ARROW ICE CREAM COMPANY RE-CAPITALIZE

The Arrow Ice Cream Company, Page and Bayard Blvds., St. Louis, Mo., has re-capitalized for \$25,000. The new officers are as follows: Chas. Kreutz, president; Boyd T. Tobin, vice-president and treasurer; Edw. Kreutz, secretary and manager. All new directors were elected.

Arrangements have been made for a new refrigerating plant, building alterations are under way, and with increased facilities for manufacturing and distributing the company is preparing to double their last year's output, officials say. The new equipment includes two five-hundred gallon Wizard Storage Vats and C. I. refrigeration.

PROPAGATING A NEW WALNUT TREE.

H. R. Mosnat, Morgan Park, Ill., hopes by the fall of 1925 to have a supply of black walnut meats from his Morris trees in sufficient quantities for sale purposes. The parent tree stands in the Spoon River Valley of Illinois, made famous by Masters book, "The Spoon River Anthology." Mr. Mosnat advises us that he has another black walnut tree that no one else is propagating that he considers even better than the Morris. This is known as the Lewis black walnut. If he can supply black walnut meats from these trees in commercial quantities, and have them as good as some samples we have inspected, we are sure they will be welcomed by ice cream and confectionery manufacturers.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

WANT

DEPARTMENT

HELP WANTED

WANTED—Men familiar with the immense profit in ice cream and creamery business to join in the management of a plant in a large Mid-west city. Full partnership without obligation. Address R-795, The Ice Cream Review. 1-24

WANTED—Man with technical training and several years experience in dairy industry is looking for an opportunity as production manager or field man in ice cream or city milk plant. Willing to invest in business. Address R-859 Ice Cream Review. 1-24

WANTED—All superintendents, assistants and persons to know that there is an opportunity for you in a good paying business in your community. There is no competition and the investment is small. Profits are derived and you do not necessarily quit your present employment. Your knowledge and under your supervision this business can be successfully carried on. Let us send free literature outlining our proposition. Just a few days of investigation will prove there is a rare opportunity awaiting. Get in touch with us at once. Address R-811, Ice Cream Review. 1-24

PENNSYLVANIA SHORT COURSE.

Officials of the Pennsylvania State College have announced details in connection with ice cream making course to be offered in connection with the college's thirty-second annual short course, beginning January 3 and ending March 1, 1924. The ice cream making course will consist of the principles and practices involved in the manufacture of commercial ice cream. Much time will be given to practice work in calculating the mix and freezing. There will be a study of the manufacture of ice cream, including refrigerating machinery.

There also will be courses in buttermaking, cheesemaking, bookkeeping, bacteriology, testing dairy products, and market milk and milk condensing.

NEW ICE CREAM PLANT AT LONGVIEW, WASH.

The Highland Dairy Company of Mount Vernon, Wash., is erecting a new brick and tile ice cream factory at Longview, Wash. The new building will be 60x70 feet with a capacity of 1,000 gallons of ice cream daily, and at a cost of about \$10,000. They will manufacture ice cream, ice and other milk products and expect to start operation about the first of February. E. Thomas is to manage the plant.

Don't be without a position, when at a small city you can locate one through the Want Department of "The Ice Cream Review."

RESOLUTIONS OF THE NATIONAL ASSOCIATION OF ICE CREAM MANUFACTURERS, ADOPTED AT CLEVELAND, 1923.

"WHEREAS, this Twenty-third Annual Convention has been the most splendidly attended meeting of our Association, and

WHEREAS, much of the credit for so large an assembly is due to the efforts of The Association of Ice Cream Supply Men;

THEREFORE, Be it Resolved; that the National Association of Ice Cream Manufacturers record its appreciation of the work done by The Association of Ice Cream Supply Men, and instruct the President and the Secretary to convey this thought to the officers and members of The Association of Ice Cream Supply Men, and that this resolution be made a part of the minutes of this meeting, that a permanent record of our appreciation may be kept.

V. F. HOVEY,
President

N. LOEWENSTEIN,
Secretary"

FEBRUARY 1924

WESTERN Canada is to be the scene of an interesting dairy gathering early this month. Members of six important organizations of dairy manufacturers of four provinces will meet in joint convention at Moosejaw the week of February 4. Among these groups will be the Western Canada Ice Cream Manufacturers' Association.

Five years ago this writer attended a convention of Pennsylvania and Maryland manufacturers and heard a Canadian tell something very interesting to the members of a section that is noted for its per capita consumption of ice cream. He told of trucks hauling ice cream in sub-zero weather over the plains of Canada, meeting the problems of a scattered population and extreme weather and selling ice cream in spite of it all.

The late Robert Crane was presiding over that convention, and it is recalled that he then made the remark that "the ice cream industry does not suffer from trouble, but from not facing it with a fight."

The speaker on that occasion was Morden Neilson, who later became vice-president of the National Association of Ice Cream Manufacturers. At Moosejaw he will judge the ice cream scoring contest, or the "ice cream competition," as the Canadians call it.

MICHIGAN dairy manufacturers are all set for their drive upon Kalamazoo. The annual Michigan Dairy Show is holding its usual strong interest for manufacturers of that state and their neighbors in surrounding states. Attendance for this year is expected to be even greater than ever before. The Michigan Dairy Boosters have made preparations for a larger exhibition than they have ever held. Officials of the Michigan Allied Dairy Association have announced an interesting program, adding that arrangements have been made for a very large gathering.

IN a recent issue of The Ice Cream Review we sound a warning on credits. We pointed out that careless selling and buying is bad for the ice cream industry.

We have had many expressions of approval from ice cream manufacturers all over the country. These men in the industry realize that poor business practices are mighty risky to build on.

The ice cream manufacturer who sells his product carefully, watching credits all the time, is a careful buyer too. The man who sells him equipment and supplies can do business with him in safety. On the other hand, the manufacturer who is careless with his credit is a comparatively poor risk for the man who sells him what he needs.

This important question of credits is entitled to more attention it is receiving at the various conventions. Men who have got into the habit of selling or buying carelessly should get on the right track. They will not resent any efforts made by folks who have the interests of the industry at heart, to put it on a business basis.

Ice cream manufacturers are not the only ones who are giving attention to this subject. The men who sell selling equipment and supplies realize that loose credits don't mean selling more goods. Loose credits mean losing more money. We quote from a letter by one of the leading salesmen in the ice cream industry as follows:

"Final profit at the end of the season is what counts and not volume of business written. That's true in making of our own final individual sales records, and true for our houses, too. We should keep a stiff upper lip on credit risks. We should sell on the basis of merit of goods and not price competition."

Surely this salesman has the right idea. He is selling for the best interests of his house and for the best interests of the industry. He realizes that an order doesn't count for very much until the goods are paid for. Some folks have yet to learn this lesson.

Not many days ago we met a very prominent Illinois ice cream manufacturer who enjoyed and appreciated our editorial on credits. He went on to tell us of a visit made him by a certain salesman who wanted to place a trial order. The manufacturer explained that he was well stocked up. After several vain attempts to get "the name on the dotted line" the salesman offered to put in the goods and wait six months before invoicing for them. He not only failed to get an order but he lost the respect of that manufacturer.

When we buy supplies we expect to pay for them promptly. When we sell our goods we expect our pay at the agreed time. In following this principle and sending it to the men and firms in the ice cream business we feel that we are serving their best interests. It is not too far along in the New Year to make a resolution, if necessary, to make 1924 a better business year—more ice cream sold, more supplies sold and all on a business basis.

Ice cream manufacturers still refer to an "ice cream season," having in mind the hot weather. We were indeed surprised not long ago to find a Southern ice cream manufacturer refer to the "ice cream season." If there is any place on the map where ice cream should be sold the year round it is in the Northern states.

There may be a butter season for the creameryman, a season for the milk dealer, but we are sure it is twelve months in the year.

We have in mind a Northern city where several ice cream manufacturers push the sale of their ice cream intensively during the winter months as during the summer months. It gets pretty cold in that city and the streets are sometimes pretty badly blocked with snow but you will always find the big ice cream trucks pushing through making their deliveries. Even in the winter when most automobiles remain in their garages, the big ice cream trucks, along with the milk and delivery trucks, are the first to fight through the snow to make their regular deliveries.

They do not claim that these ice cream manufacturers sell much ice cream in sub-zero weather as in the hot summer months. Consumers, however, have learned to look upon ice cream as an all-year-round dessert, and never think of an "ice cream season." They have been educated to look upon ice cream as a food—a delicacy—suitable for the table on all occasions and at all seasons of the year.

An ice cream manufacturer in that city spends just as much money for advertising ice cream at one time of the year as at another. On the billboards, in the newspapers, in the newspapers, everywhere that food is advertised, you will find ice cream advertised at all seasons of the year. Housewives have to look in the Sunday morning papers for "ice cream" advertised by the different ice cream manufacturers. Then a telephone call brings the Sunday dessert to their home. Sunday's "specials" are year-round dessert in the homes of that city.

How do these manufacturers do it? This is the big question that comes to the minds of the dealers. How can ice cream manufacturers keep a profitable business during the cold winter months? In the first place, they make good ice cream—very good ice cream. Visitors to that city agree that no ice cream is made anywhere. In fact, it is probable that it is possible to make better ice cream. A bountiful supply of dairy products is close at hand. The state

food law, which is rigidly enforced, requires a comparatively high percentage of butterfat. Keen competition for high quality does the rest.

They not only make good ice cream but they make it easy for the people to buy it. They give good service to the dealer. We have heard ice cream manufacturers say that they cannot afford to give good service to dealers and consumers except during the hot weather, because their gallonage is so low. Better turn the key in the factory door for about nine months of the year. How can they expect to build up gallonage by keeping their products away from the consumer?

Quality and service, supplemented by co-operation between manufacturer and dealer will develop ice cream consumption to the highest possible point and encourage eating lots of it twelve months of the year. Co-operation with the dealer means the right kind of an all-year-round advertising campaign. Some manufacturers, when they think of an advertising campaign, think only of the dealer. If they can load him up with a lot of advertising matter they think they are putting on an effective campaign. Then they wonder why advertising doesn't pay. They forget that the dealer is loaded up with just such advertising from the manufacturers of the many articles he has for sale. Their advertising literature gets about as much attention from him as does the enormous amount of patent medicine advertising that comes to him through the mails.

We do not believe that it is possible for the ice cream manufacturer to "advertise" the dealer into selling more ice cream. He must be shown how to sell more ice cream, and he can't do it unless his customers will buy it. The way to get his co-operation is to help him sell more ice cream and that means getting your story right into the homes of the customers. Don't forget the folks who are going to eat the ice cream. When they have been taught to look upon good ice cream as an all-year-round dessert, it is easy for the dealer to sell them. Then, and then only, is it possible to get his interest in a co-operative plan for increasing sales.

Building up your dealer's business by helping him sell more ice cream is the best way to build up gallonage. An advertising campaign which merely seeks to gain new accounts is a failure before it starts. Taking business away from a competitor doesn't increase consumption. Helping your dealer sell more ice cream does.

Our knowledge of conditions in that Northern city, to which we have reference, leads us to make the suggestions offered above. The manufacturers in that city are making a success by emphasizing these three factors—quality, service and co-operation. This is the triumvirate upon which they are building up gallonage. They increase sales by increasing consumption. They don't spend money trying to get dealers away from each other.

ALTHOUGH there are many indications that the price situation for raw materials will not materially advance this year, ice cream manufacturers will do well to be prepared for some increase in different lines

sometime during 1924. The Ice Cream Review has attempted to "feel out" the different supply firms as to future courses for prices.

Fruits and vegetables will cost virtually the same as for the past year. Two gelatine houses say that prices for 1924 will be the same and two believe there will be an advance, one of the latter predicting a ten per cent advance. Sugar should not advance.

The cost of your mix will depend upon the supply of milk in your neighborhood. On the whole it does not seem that ice cream will cost much more to manufacture this year than it did for 1923. But be ready for a little additional cost, anyhow. Nobody can be absolutely sure of anything, except taxes and death.

PANAMA TRIP PLANNED FOR NATIONAL CONVENTION DELEGATES AT NEW ORLEANS CONFERENCE LAST MONTH.

TENTATIVE preparations for one of the most colorful conventions in the history of the National Association of Ice Cream Manufacturers were formed at a conference at New Orleans last month of officials of the national association, the Southern association and The Association of Ice Cream Supply Men.

The officials conferred with New Orleans ice cream manufacturers. In addition to selecting hotel headquarters for the national, Southern and supply associations, steps were taken looking to a possible trip of convention delegates through Havana, Cuba, to the Panama canal, as a feature of the trip to New Orleans when the national convention will be held there November 17, 18, 19 and 20, 1924. The Southern convention will be held November 14 and 15, after which Southern delegates will join with the national delegates in the first national convention of ice cream manufacturers ever to be held in the south.

While official confirmation of the developments of the conference was not given as this issue of The Ice Cream Review was going to press, Secretary N. Loewenstein advised The Ice Cream Review that he was proceeding with the issuing of a bulletin in which he would advise members of the national association regarding hotel arrangements. Reservations, it seems, can only be made through cards to be issued by Secretary Loewenstein.

All meetings, both of the Southern and the national associations, will be held on the twelfth floor of the Hotel Roosevelt.

Exhibits will be placed at the Fair Grounds, and several other places. The committees inspected one of the big ships of the United Fruit Company with the idea of arranging for a tour through Havana to the Panama Canal. No definite action was taken.

Officials at the conference were W. W. Campbell, vice-president of the National Association of Ice Cream Manufacturers; N. Loewenstein, secretary; Roberts Everett, secretary-manager of The Association of Ice Cream Supply Men, and J. W. Clopton, secretary of the Southern Association of Ice Cream Manufacturers.

The officials were in touch with Harry A. Benners, president of the Dixie Flyers; E. B. Geisel, Ben C.

Brown and E. R. Harris, New Orleans manufacturer and Mr. Pearson, chairman of the convention bureau, New Orleans.

With tentative arrangements so well shaping up it is easy to believe that the Southern visit of the national association will be one of the most eventful in the history of organization in the industry.

A discussion of iceless cabinets, beginning on the ten of this issue will be found of much interest, we are sure. A careful selection was made of speeches delivered on this subject at recent conventions, and it is believed that our selection for this issue will give manufacturers a better understanding of the newcomer to the industry. It is generally agreed that the iceless cabinet will revolutionize the industry. Whether it can serve your business in proportion to its cost depends upon your business and how you are handling it.

But you are sure to find the discussion very interesting.

WE HAVE no quarrel with the manufacturers who like to hire "go-getter" salesmen. Every effort to build sales is to be commended, if it is in the right direction. There's not much glory in it for anybody when sales are won by taking business away from somebody else. A salesman who can gain a new customer and then show him how to sell ice cream instead of to fill orders, how to talk intelligibly and convincingly about why people should eat more ice cream—such a man as that would be of inestimable value to any manufacturer. He would be one of the industry's precious jewels.

You may not be able to afford a salesman of this kind, but if you are producing quality ice cream, you are sending out the best "go-getters" for new business that can be found in the industry at this time.

BULLETIN OF EVENTS

- Michigan Allied Dairy Association**—Annual Convention and Exhibition, Kalamazoo, February 4, 5, 6, 7 and 8, 1924. Secretary, R. F. Frary, Lapeer.
- Michigan Dairy Boosters**—Annual Convention and Exhibition, Kalamazoo, February 4, 5, 6, 7 and 8, 1924. President, C. Yunker, Zipp Manufacturing Co., Cleveland, O.
- Western Canada Ice Cream Manufacturers' Association**—Annual Convention, Moose Jaw, Sask., February 6, 7 and 8, 1924.
- Ice Cream Manufacturers' Association of South Dakota**—Annual Convention, Watertown, February 19, 20 and 21, 1924. Secretary, T. H. Wright, Brookings.
- Virginia Ice Cream Manufacturers' and Creamerymen's Association**—Annual Convention, Harrisonburg, March 5 and 6. Secretary E. M. Blair, Lynchburg. (First day of the convention for creamerymen and second day for ice cream manufacturers.)
- Virginia Creamerymen and Ice Cream Manufacturers' Association**—Annual Convention, March 5-6, Harrisonburg. Secretary E. M. Blair, Lynchburg.
- North Dakota Ice Cream Manufacturers' Association**—Annual Convention, Fargo, March 9, 1924. Secretary, Harry G. Grand Forks.
- Dairy Products Association of Kentucky**—General meeting, Louisville, March 12. Secretary, Carlton Ball, Louisville.
- National Association of Ice Cream Manufacturers**—Twelfth Annual Convention, New Orleans, La., November 17, 18, 19 and 20, 1924. Secretary, N. Loewenstein, 155 N. C. St., Chicago.
- Southern Association of Ice Cream Manufacturers**—Twelfth Annual Convention, New Orleans, November 14 and 15, 1924. Secretary, J. W. Clopton, Decatur Ice Cream & Creamery, Decatur, Ala.
- Georgia Ice Cream Manufacturers' Association**—Annual Convention, Augusta, Ga., some time in December, 1924. Secretary, Sam Marshall, Marshall Ice Cream Co., Albany, Ga.
- Arkansas Ice Cream Manufacturers' Association**—Annual Convention, Little Rock, some time in December, 1924. Convention headquarters, Hotel Marion. Secretary, Charles Berry, Pine Bluff.

Four States Await Michigan Show

Officials Announce Everything in Readiness for Convention of Michigan Allied Dairy Association and Boosters' Exhibition, Week of February 4

Kalamazoo is Scene

MICHIGAN dairy leaders were putting on the finishing touches in preparation for their annual trade festival as this issue of The Ice Cream Review was going to press. Michigan's dairy event is something more than a convention. It embraces all convention and exhibition features common to the industry and at the same time teems with the inspirational qualities of a celebration. The average visitor gets the impression that the Michigan dairy gathering is a celebration of progress in dairy manufacturing. It is educational.

city had much to do with their success then Armory is an excellent place for an exhibition, theasonic Temple offers a splendid place for socials, and Kalamazoo hotels provide satisfactory accommodations. Michigan officials say. The annual "smoker" held in the Armory this year.

The Michigan Allied Dairy Association is composed of the following bodies, all of which will be represented at Kalamazoo:

The Co-operative Association of Creameries, the Dairy Producer's Federation of the Michigan Dairymen's

Kalamazoo Auditorium—Armory.

The Michigan Allied Dairy Association and the Michigan Dairy Boosters join hands in staging the Michigan convention and exhibition. The Boosters are composed of suppliers selling the trade in that state. Their exhibitions have become one of the outstanding shows of the industry, being regarded by many as ranking next to the National Dairy Exposition and the National Ice Cream Exposition.

The Dates are February 4, 5, 6, 7 and 8. Kalamazoo is the Meeting Place.

Ice cream manufacturers, milk dealers, creamerymen and cheesemakers will attend the convention this year in greater force than ever, according to R. F. Frary of Lapeer, secretary of the Michigan Allied Dairy Association.

C. J. Yuncker, president of the Michigan Dairy Boosters, advises The Ice Cream Review that the Michigan show this year will be "larger than ever." He says there will be approximately 100 booths in which will be displayed products covering every phase of dairy manufacturing.

The Boosters' entertainment program will again be a feature, but the secretary promises that it will be "different" this year. However, there will be the usual "smoker," dance, banquet, with the spice of variety thrown in in various forms.

The Armory will be the scene of the convention this year. The Michigan people were highly pleased with results of their meeting at Kalamazoo last year. They believe that the excellent convention features of that

association, the Michigan Association of Ice Cream Manufacturers, the Michigan Association of Creamery Owners and Managers, the Michigan Buttermakers' Association, Michigan Guernsey Cattle Club, Michigan Holstein Friesian Association, Michigan Jersey Cattle Association, Michigan Milk Dealers' Association, Michigan Milk Dairy Inspectors' Association, Michigan Milk Producers' Association and the Michigan Poultry, Egg and Egg Association.

Ready for Record Attendance.

Secretary Frary says preparations have been made for a record attendance. Kalamazoo hotels have made their promise that everything will be done to accommodate a large number of delegates. Not only will Michigan manufacturers and suppliers attend, but the secretary is expecting a number of visitors from Illinois, Indiana and Ohio.

W. A. Wentworth, general secretary of the Dairy Products Association, is on the program for speeches. He will address one of the general meetings on the subject of "What Does Organization Do?" On the last day he will address the ice cream manufacturers on the subject of "Why the Business Man Should Support His Trade Association."

One of the feature speeches will be that of C. Redicott of Freeport, Ill., on "Why Are Not All Successful in Business?" K. J. Monrad's speech "Service" also is expected to be of much interest in addition to the usual excellent speeches by Michigan dairy leaders.

Any RUST on Your Truck Chassis?

At your next opportunity, step into your garage and inspect the chassis of your motor trucks.

Will you find the springs, brake mechanism, axles and frame packed with RUST? If you do, your motor truck chassis are depreciating at an alarming rate. Rust is the one great enemy to long chassis life; it must be prevented to the greatest possible degree.

The predominating cause of rust on a motor truck chassis is a body which will allow brine to drip or seep on the chassis. A body of this class is prohibitively expensive, regardless of its first cost.

Guard against rust.

Equip your chassis with ABC Refrigerator Bodies. They *cannot* allow brine to drip, ever!

Mechanically Refrigerated Cabine

Cabinets and Fountains Mechanically Refrigerated May Save Money for Manufacturer, Dealer and Consumer, Speakers Believe

By F. B. RILEY*

ON the subject of "Mechanically Refrigerated Ice Cream Cabinets and Refrigerated Soda Fountains,"

I shall answer some of the unvoiced queries of the great body of ice cream manufacturers who are today looking with interest and perhaps with appreciation on this new method of servicing ice cream. The comments to be made in this discussion are my personal observations and not necessarily endorsed by my present employers.

It is never easy to change established trade customs, no matter how desirable the change may be, however, there have been so many changes in the technique of our industry within the past ten years that the proposed change from ice and salt to mechanically refrigerated cabinets and fountains will, if carried out in an orderly way, without undue compulsion from competition, cause no great ripple on the surface of our business.

A refrigerating machine should be a servant of the industry and not its master. It should be used and regarded as a splendid and modern way to service a worthy product rather than as a weapon to stifle competition. I regret to note that in many localities it has been used not as it should be used but merely to strike terror into the hearts of competition. I am glad to say that this condition cannot long exist because a number of machines and refrigerated cabinets of unquestionable merit will soon be offered for your consideration. If your trade demands mechanical refrigeration, you will be able to offer a service that will be the equal of anything offered by your competitors.

Many factors must be taken into consideration before plunging into mechanical refrigeration; we must not only finance the new equipment but must wipe off our investment in the old style cabinets; our trucks must be modernized, if not already done. We shall use lighter and faster trucks with completely refrigerated bodies. What are we going to do with our splendid ice making equipment? Can we dispose of our ice profitably? If the new plan of servicing will save money over present methods, we cannot resist the new invasion long. If it becomes a burden on our industry it will not survive more than a few brief seasons. I believe that a modern refrigerated cabinet and a modern refrigerated fountain will save money for the manufacturer, for the dealer and ultimately for the consumer because the savings which can be made by this new method of servicing will, in part at least, be passed along in a lower price to the consumer and result in increased gallonage which will be handled on a profitable basis.

Some of the Questions.

Is it possible to refrigerate, mechanically, one hundred per cent of our customers? Can we go from top to bottom and place a machine in every retail store? If so, what about churches, ball parks, fairs, and the summer amusement places, etc? Must a dual service be maintained in order to take care of our present

business? How about our rural customers who have no electricity?

Rural customers without current or water are and far between. A dual service will unquestionably be maintained, but probably be handled as a special department, more perhaps as a fancy ice cream department, is maintained by many of us at the present time.

1. Your customers, many of them at least, will willingly go to any expense to put in this new service. They will want it and make a great outcry to get it, but it must not cost them anything, because, they will glibly tell you of the great amount of money that they are going to save by not delivering ice and salt, if you don't want to put it in without expense to them, they know of some manufacturer who will put a machine for them tomorrow and make whatever alterations or changes that are necessary to accommodate the cabinet or machine without expense to themselves.

2. A great many soda fountains now in service are comparatively new and the dealer will not discard the present work board and buy a new one at a cost of four to six hundred dollars. You may put in a hol cabinet in a back room, or near the fountain, but in this case, you must either ice up the old fountain maintaining dual service, or run a chance of losing a customer.

3. Power and lighting lines are in many instances particularly in old buildings, heavily overloaded so you cannot install even a quarter or third horse power motor without putting in new power lines and service boards. That may cost from fifty to two hundred fifty dollars. Who is going to stand this expense? The customer? Not if he knows it he won't.

4. Many dealers have short time leases and do not particularly good business to place a four or five hundred dollar investment in a store where the cost of installation and removal may run to fifty or seventy-five dollars and the expectation of life of the business is precarious at best.

5. It is almost certain that any contract you have with your customer, attempting to tie him over a long period of years will have nothing more than a sentimental value; you probably cannot enforce the contract and if it should be enforceable, the publicity caused by lawsuits with your customers would probably scare other dealers from entering into a similar contract. If you cannot hold your trade with the quality of product and the service you render, your customer will be a liability instead of an asset. You should, however, retain title to the cabinet, or equipment, in the business of the dealer passes into other hands.

6. You will unquestionably be required to install at least two sizes of machines—the small or cabinet machine and a larger one capable of handling the complete fountain with all of its products. This will require the building up of servicing and erecting organizations, either by individual manufacturers, or by erecting and servicing organizations may be brought into existence to take care of the erecting and servicing.

Western Canada Dairy Week Near

Four Provinces to be Represented in Joint Conventions of Six Associations of Dairy Manufacturers Week of February 5

Ice Cream Scoring

THE week of February 5 will be "dairy week" in western Canada. Six organizations and committees of dairy organizations in the western part of the old Dominion will meet in joint convention at Moose Jaw February 5, 6, 7 and 8.

These meetings will consist of the fifteenth annual meeting of the Saskatchewan Dairy Association, the annual meeting of the National Dairy Council of Canada, annual meeting of the Western Ice Cream Manufacturers' Association, annual meeting of the Saskatchewan Holstein Breeders' Club, the annual meeting of the Saskatchewan Ayreshire Breeders' Club, and the annual

J. A. Ruddick, Ottawa, dominion dairy commissioner.
C. P. Marker, Edmonton, dairy commissioner, Alberta.

L. A. Gibson, Winnipeg, dairy commissioner, Manitoba.

Henry Rive, Victoria, dairy commissioner for British Columbia.

Miss Helen Campbell, Ottawa, director milk and cream service, federal dairy division.

Prof. A. Leitch, Guelph, Ont., director agricultural research dept., Ontario Agricultural College.

Morden Neilson, Toronto, Ont., president and general

J. A. CAULDER,
President Western Canada Ice Cream
Manufacturers' Association.

MORDEN NEILSON,
Judge of Ice Cream Competition.

F. L. MARTIN,
Director Western Canada Ice
Manufacturers' Association.

meeting of the Interprovincial Committee of Dairy Manufacturers.

Four provinces will be represented—British Columbia, Alberta, Saskatchewan and Manitoba.

"A conventional week with conventionalities omitted," is the way the convention announcement reads. Ladies have been invited and arrangements have been made for social features.

Officials advise *The Ice Cream Review* that the papers and discussions will bring out the facts of the existing situation in the Canadian dairy industry and also facts for improving it, but when the hard day's work is over—"The night will be filled with music, and the cares that infest the day

Shall fold their tents like the Arabs, and as silently steal away."

The Milk Maid's ball and special entertainment is to be one of the lively features of the convention, this to be held on the evening of February 8. Prizes will be awarded for the best milk maid's costume.

Manufacturers have been invited to bring along their troubles in business for discussion. An interesting educational program has been announced with the following speakers:

Hon. C. M. Hamilton, Regina, minister of agriculture for Saskatchewan.

manager Wm. Neilson, Ltd., ice cream and chocolate manufacturers.

E. H. Stonehouse, Toronto, president National Council of Canada.

D'Arcy Scott, secretary and general counsel National Dairy Council of Canada.

Jos. Burgess, Montreal, chief dairy producer for Canada.

E. T. Love, Edmonton, general manager Wood Dairies and an oleomargarine enthusiast.

P. E. Reed, secretary of the Saskatchewan Dairy Association, has made the following announcement regarding the ice cream competition of which Morden Neilson will be judge:

"In 1923 the Saskatchewan Dairy Association, with the co-operation of H. J. Walker, Western manager of the Canadian Milk Products, Limited, put on an ice cream makers' competition in connection with the Saskatchewan dairy convention. This competition was a great success and found widespread interest.

"The officers of the association have pleasure in announcing that a similar competition will be conducted in connection with the western Canada convention at Moose Jaw in February, Mr. Walker again having generously donated prizes to be awarded for the three bricks of plain vanilla ice cream. The first award

MARKET FOR ICE CREAM MACHINERY IN ENGLAND.

Robert E. Macatee, American Consul at London.

There should be a growing market in Great Britain for American ice cream manufacturing machinery. The market is capable of considerable expansion. At present there is practically no competition offered by either foreign makes and the American article is regarded as supreme in the field. It is understood that many in London recently manufactured and put on the market a machine copied from a well-known American make, but abandoned the project, owing to inability to compete with the American machine. American makes of both power and hand freezers are considered as dominating the market. A type of machine which has met with much success in the British market is a vertical brine freezer, which is sold in London for £133 10s.

Ice cream as a popular refreshment has been growing in Great Britain for the past 20 years. The methods of manufacture were at first very unsanitary, and the trade was largely in the hands of Italians, who worked on a small scale. It has been only recently that modern and sanitary methods of manufacturing ice cream in large quantities have been introduced. It is estimated, by a successful agent selling ice cream manufacturing machinery, that the consumption of ice cream in Great Britain has, in the last two years, advanced to a remarkable degree of 1,000 per cent. One firm of manufacturers has increased its equipment of power freezers from 1 to 17 machines during a period of three and a half years, manufacturing at present from 2,500 gallons a week. As an indication of the growth of business which has already been done in this line, it may be stated that there are already in operation in Great Britain about 165 power freezers of American make.

The market could be worked to the best advantage by an exclusive agent in London, who would sell on a commission basis, and who would cover the whole of the country. As might be naturally supposed, the principal buyers of the large power machines are the confectioners and caterers, and the large hotels and restaurants. Several large department stores have also purchased power machines in connection with their refrigerated soda water fountains.

Such as the limitations of the successful methods of ice cream production are now well understood, the time is ripe for an increase in the activity of the educational work whose duty it is to carry the information to the public of the machines. The chief handicap in getting acceptance of really satisfactory methods of ice cream making machines has been the fact that many men could and still can usually dispose of their ice cream through an improperly cleaned machine and at a price as low as milk drawn through a clean machine. The thing that is most needed is the development of a fairer and more effective milk inspection. This inspection can only be accomplished by basing it on results obtained from proper laboratory analysis of milk.

DEFINED.

Walter was reading the evening paper. "Say, is that a diplomat?" he questioned. "Diplomat, my boy," replied his father promptly, "who remembers a woman's birthday, but forgets his own."

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

Bigger Ice Cream Sales

Send for
your copy
of this
Free Book

Just as its name implies, it tells how you can get bigger and steadier ice cream sales. It's just the story you and your dealers have wanted for many years. It tells the complete Sealright story.

The story of Sealright containers, how to fill them, how to deliver them, how to sell them, how to promote sales for your dealers, how to work up a volume business of these popular Sealright packages of your ice cream. This book also tells the story of Sealright national advertising in The Saturday Evening Post, teaching the public to eat more ice cream and to "carry it home in a Sealright Container."

Sealright Liquid-Tight Paper Containers are 100% leak-proof, drip-proof, crush-proof. Made in all convenient sizes from 1/4 pint to gallon, and the One-Time-Use Paper Packing Tray. Can be filled direct from freezer or by Sealright Ice Cream Filling Machines. No special mix required. Write for samples.

Send for your copy of this valuable book today. It costs you exactly nothing.

Indiana Dairy Manufacturers Meet

Milk Dealers, Creamerymen and Ice Cream Manufacturers Hold Lively Convention at Indianapolis December 13 and 14. Stirring Sessions Held

THE butter, milk and ice cream industries of Indiana were well represented at the annual convention of the Indiana Manufacturers of Dairy Products in the Lincoln Hotel, Indianapolis, on December 13 and 14. A great deal of interest was evidenced in the subjects under discussion and it was noted that a great many interested in one branch of the dairy industry stayed over for the session of the other. The afternoon of the first day was devoted to the ice cream division, the morning of the next day to the milk division and the afternoon of the second day to the butter division.

In the absence of J. L. Stucky of Muncie, who is chairman of the ice cream division, Mr. Ogle of the Evansville Pure Milk Company, Evansville, was appointed temporary chairman. Mr. Ogle addressed the convention briefly and then called upon the secretary to read his minutes of the last annual convention.

Truck Transportation.

At the close of this report, F. W. Fenn of the Service Motors, Inc., Rochester, N. Y., delivered an address on "Truck Transportation." Mr. Fenn brought out the advantages of the motor truck over horse and wagon or rail delivery under certain conditions. The motor truck, he says, is preferred for delivery within a distance of one hundred miles. It affords the manufacturer a greater area over which to distribute his products; it assures him quicker delivery; and a delivery system that is under his own control, one which a railroad strike or wreck cannot put out of commission. The manufacturer, furthermore, has direct connection with his consuming trade and the market and is not depended upon employees of other corporations to deal with and deliver his goods to his customers. This is a distinct advantage, especially when discourtesy and the irresponsibility of railway and express employees has anything to do with your getting and holding business. The truck, furthermore, eliminates unnecessary handling, only one loading being necessary and one unloading from the time the product leaves the factory until ready for delivery to the consumer or the retailer.

Mr. Fenn also gave some interesting figures pertaining to the cost of delivery when the horse and wagon or motor truck is in use. He stated, as a further advantage, the advertising value of a motor truck over the old horse and wagon system, a large truck affords a splendid opportunity for the manufacturer to advertise his wares. It is a moving advertisement, a portable bill-board, which reaches in its travels over the country roads, or streets a great many more people than could be reached by a bill-board in a stationary position on the streets or highways. He urged the ice cream manufacturers to use only the best materials when they build their motor trucks, to use the best quality of paint and to employ skilled painters or decorators so the advertisement placed on the side of the motor truck will be a credit to their products.

Mr. Fenn also mentioned the fact that the rate of insurance on a truck that has been overhauled is the same as that on a new truck. Many manufacturers do not know this and are paying the higher rate charged for old equipment even though the truck has been taken into the shop and overhauled and made practically as good as new. He says that the new rate is effective on all thoroughly overhauled equipment according to Mr. Fenn's belief the operator of a motor truck should give it the same attention the railroad company gives their engines. If the motor truck is in at night it should be thoroughly gone over, and

greased and given a general inspection to see that everything is absolutely all right. Where a number of motor trucks are used, a skilled employee should be on hand to do this work.

Iceless Ice Cream Cabinets.

There was some discussion of the iceless ice cream cabinet led by James W. Smith of Indianapolis. Mr. Smith mentioned briefly the progress that has been made in the last few years in development of the automatic iceless cabinets and why he believes the iceless cabinet is destined to replace the old salt-and-ice system. Considerable experimenting is yet to be done and the refrigerating system must be made practically automatic and fool-proof. The druggist does not want to bother with it. In many cases a druggist and his employees are incapable of handling or operating a refrigerating machine and the machine must be automatic in its operations. The cost of operation must be brought down to the lowest point possible. Mr. Smith also discussed the different kinds of refrigerants. He believes that ammonia is the best refrigerant that has been found so far. Another refrigerant and one that was accidentally discovered during the war is called "propane." These two differ somewhat in action and propane is absolutely odorless. It has a boiling point of 49 degrees below zero. There is one disadvantage in using propane, at the present time, however, and that is its flammability. Being odorless and flammable a method must be found to discover leaks in the system.

Thomas J. Stewart of St. Louis, also gave a talk on the refrigerated cabinet. He represents the Nelson Manufacturing Company of St. Louis, who have been experimenting the last two or three years with an iceless cabinet. They are using menthol chloride in their ma-

chine and he says it seems to do the work a lot better than any other they have tried. Mr. Stewart advised the manufacturers to try out one or two of each of the different machines and give each one of them a thorough test. Mr. Stewart said the iceless cabinet will enable the ice cream manufacturer to conduct his business like a white man, close up on Sunday and take time and go to church, and know that his customers are getting their cream. He also discussed the cost of operation, amount of electricity required, number of hours the machine runs under certain conditions and the advantages of certain types of installations. Mr. Stewart's company uses redwood throughout in manufacturing their cabinets, believing that it is an insulator, nearly as good as cork.

Mr. Loewenstein, secretary of the National Association of Ice Cream Manufacturers, and the Illinois Association of Ice Cream Manufacturers, stated that at the Illinois association meeting, held the first part of that week, the matter was very thoroughly discussed and a great many more of the ice cream manufacturers took part in the discussion of it. A committee was appointed to make a thorough investigation, visit ice cream manufacturers and retailers who use the different types of machines and report their findings to the association.

There was also some discussion regarding the standardization of equipment for the ice cream factory. Mr. Antrim stated that the milk dealers had been about the standardization of sanitary fittings and pipes and that there is still a great deal of work to be done from the milk dealers point of view to standardize cans and bottles, cases, carriers and other kinds of equipment. The ice cream industry would also benefit from such standardization and he recommended it. He mentioned the fact that the government has gotten out a bulletin on standardizing fittings which was supposed to have been sent to all the manufacturers of ice cream products in the country, and anyone who did not receive their copy could get it by writing to the Division of the Department of Agriculture, at Washington.

The inside diameter has been adopted as standard and customers should specify inside or outside diameter when ordering so that there will be no mistake. It will be some time, of course, before a standard fitting is universally used for a great deal of the other fittings now in use and it would not be profitable to tear out and install, the standard fittings instead.

The election of officers for the ice cream division completed the session for Thursday. W. R. Corbin of Lafayette, was elected chairman and A. W. Antrim of Indianapolis was elected secretary.

Friday, December 14.

Friday's first session was devoted to milk delivery. G. W. Hornby of Evansville, chairman, and E. C. Hornby of Anderson, secretary, in charge.

C. E. Clement of the U. S. Department of Agriculture was the first speaker. Mr. Clement read an interesting and instructive paper on milk plant operation, and certain economies that the department of agriculture has found are being used in certain plants to cut down the cost of operation. Mr. Clement's address will be furnished complete and published in a later issue.

Bacteriological Tests As A Basis For Payment

In the discussion that followed Mr. Clement's address, the matter of making bacteriological tests a basis for payment of milk was brought up. Professor Gregory of Purdue asked if Mr. Clement found that many of the milk plants were buying milk on the basis of quality and determining that quality by means of bacteriological tests.

Miller Refrigerator Bodies

"We SELL you one—you BUY more"

"After the initial charge of ice and salt of approximately five hundred pounds, it took no more than three ordinary pails of ice and salt to repack each wagon daily, and the temperature in the ice cream compartment was maintained at from six to eight degrees above zero."

This company is using six Miller bodies.

Use a Super-Clarified Gelatine

Clear, pure gelatine is your main consideration in picking this ingredient for your production. It means safety—good quality—fine texture.

We call our gelatine “super-clarified” because it is produced with the most exacting attention to the selection of raw materials and to the processing.

Super-clarified means safety! It means uniform high quality for your goods. It means high viscosity. You can depend upon it—always.

Atlantic super-clarified gelatines pass the pure food requirements in every state in the Union. And, although the manufacturing cost is slightly higher, due to the exceptional care in manufacturing, you can buy it for less than ordinary gelatines of corresponding grades.

Insure success by using Atlantic super-clarified gelatines.

cal examination. Mr. Clement answered that there were a few doing this but the time required to make the test was too long and a sediment test seemed to be in favor.

The sediment test will in about nine cases out of ten indicate the bacterial content of milk; in other words, if the sediment test produces a very dirty disc, it indicates that there is a higher bacteriological count and if the disc is comparatively clean, free from sediment, the milk usually has a low bacterial count. There are cases, however, where this is not true, where the can may be clean so far as the dirt is concerned but not thoroughly sterilized so that the bacterial count may be high in spite of the fact that the sediment test is good.

Mr. Frederick C. Mathews of Detroit, spoke on "Putting your House in Order." The theme of his address was getting the co-operation of employees. In his own business the bonus system has been worked out in a scientific way and this has resulted in much greater efficiency, better quality of work and fewer mistakes.

He also mentioned the systems that have been installed in some of the milk plants. One in particular, a plant at Calgary, Alberta, Canada, has fewer men employed for the amount of milk that is handled in any other plant in the country. This particular company has only a three cent spread and is getting 87 per cent of the business in the city. Every employee is on the alert to avoid wastage as much as possible, eliminate errors and to secure new business. They are interested in the business, getting new customers. They feel that the business is theirs. There is no danger of business being disrupted because of strike for a union propagandist can have no influence on them when they are paid a bonus and feel that the business in which they are working is theirs.

R. E. Little, secretary of the International Association of Milk Dealers, also attended the meeting and was called upon for an address. Mr. Little spoke of the work that the International Association of Milk Dealers has done in the past and some of their plans for the next year. The international association is the largest association of its kind and has done a great deal toward increasing the consumption of milk and improving conditions within the industry. They brought about the standardization of sanitary fittings and piping and are now working on standardization of milk cans, etc. They have committees working on economic problems, advertising, research laboratory, and work in conjunction with the agricultural colleges to obtain more uniform courses of study for milk operators and to encourage teaching of more practical subjects. The international association has also granted scholarships and has students doing post graduate work now in a number of colleges, giving special attention to milk plant subjects.

The election of officers of the milk division resulted in George Roberts of Indianapolis being made chairman and Joseph Fort of Franklin, secretary.

In the afternoon, at the session devoted to the dairy manufacturers, Carlton Ball, the new secretary of the Dairy Products Association of Kentucky, addressed the convention on the "Pulse of the Far West." Mr. Ball outlined briefly the organization of the Kentucky manufacturers of butter, ice cream and condensed milk and milk dealers, the work they have done and expect to do, and especially the work they are planning to do among the farmers, their increased production of milk and the profit the farmer may obtain from it. The stenographic report of Mr. Ball's address was published in connection with the official report in a special issue.

Insurance.

G. L. Carr of Indianapolis spoke on the "Spots in Modern Business." Mr. Carr is an insurance man of wide experience and urged the dairy product manufacturers to give more attention to the amount of insurance that they carry on their machinery and buildings. He said that it has been found that most manufacturing plants are under-insured. The plants have been built a number of years ago, at the time the materials were comparatively cheap and insurance placed on the property at that time that fairly represented its value. Since that time repairs and improvements have been made, new equipment installed and the cost of the material that was used originally in the construction of the plant has increased, so now it may cost two or three times as much to rebuild the building as it did when it was built several years ago. The value of a manufacturing plant today is what it cost a number of years ago less depreciation, but it is what would cost today to replace it. He mentioned a number of instances where manufacturers insured their plants at value a number of years ago and failed to increase it as the cost of replacement increased or as improvements and additions were made, with the result that when a fire destroyed the establishment it was a great loss and in some cases the firm was obliged to go out of business.

Another point Mr. Carr brought out was that many business men will have their property insured with a half dozen or more different companies just as many companies as there are agencies in the city. A business man feels that he wants to patronize all the different agencies so as to obtain the good will of them, but the business of each one is so small that there isn't a cent of profit in it for the agent. He mentioned one instance where a company had insurance

ASHEVILLE WINSTON-SALEM

WINSTON-SALEM, N. C.
August 28th, 1923

John J. Grothe Co., Inc.,
Woburn, Mass.,

Gentlemen:-

This will acknowledge your recent letter asking us for an expression of opinion covering the operation of Zero Body which we purchased from you last spring for use on a Mack 2-1/2 ton job. We placed this outfit in commission on June 1st and it makes a daily trip of from fifty to seventy-five miles. The cream remains in perfect condition even in the hottest days and on several occasions we have sent the truck to the other end of the route to spend the night and delivered the cream to our customers the next morning in satisfactory condition.

We are enclosing a couple photographs which we believe will answer your purpose and convince the prospective buyers that from the standpoint of appearance our job would compare with any one.

We expect to be in the market for one or two more of these bodies next spring and will talk it over with you at that time.

Very truly yours,
FORSYTH DAIRY CO.

16 different agencies, each with a premium of \$80.00. The overhead expense connected with each one of these policies was greater than the profit of commission that the agent obtained for securing the business. He recommended placing insurance with one of the good companies in their own town, and only one.

The election of officers of the butter division resulted in E. W. Johnson of Bloomington being made chairman and John Schlosser, Indianapolis, secretary.

The election of officers for the general association resulted in P. P. Triller of the Wadley Company of Indianapolis being made president and Samuel Schlosser of Plymouth, treasurer, and R. L. Hammond, general secretary.

The last and most enjoyable part of the Indiana convention was the annual banquet and dance held on Friday evening. This was in charge of the Hoosier Wild Cats, the supplymens auxiliary of the Indiana Dairy Products Association. The dining hall was filled to capacity and everyone had a good time. Music was furnished by a local minstrel orchestra and Wm. Herschel, the poet of the Indianapolis News, furnished the entertainment. Harry Stevens, former secretary of the Hoosier Wild Cats, was toast master.

A more detailed report of the different addresses of interest to the readers of this publication will be published in a later issue.

Tell us what you want, or what you have that you don't want, and we'll fix up a little Ad for you and insert it in the next issue of "The Ice Cream Review." You just stay at home and wait for results. You'll soon have your hands full.

New Heavy Duty CREASEY ICE BREAKER

IT COMBINES the huskiness and ruggedness of the largest Creasey Ice Breakers, including semi-steel drum and comb plate, socket held picks, heavily ribbed substantial frame and heavy drum and fly wheel, with a compact design and an attractive price. It is just the machine for the ice cream plant, especially where a number of ice breakers are installed for supplying ice simultaneously to several wagons. It is built in a standard model for belt drive, also with individual motor drive as shown, and with a one-piece cast-iron hopper bottom, having a circular delivery spout. The slow speed motor drives through a generous size silent chain enclosed in a steel protecting casing and running in oil.

ARCTIC COMPANY BUYS OUT CONNOR ICE CREAM CO.

The Arctic Ice Cream Company, with headquarters in Detroit, has added another extensive territory to its holdings, through the recent purchase of the Connor Ice Cream Company of Owosso.

The development of the Arctic Ice Cream Company started in Detroit in 1908. The original capitalization was \$25,000.00.

Its policy of making a pure ice cream of high quality not only brought rapid growth in Detroit, but led into the purchase, in quick succession, of ice cream plants and condenseries in other cities, officials among these were the Grand Lodge Milk Company of Grand Lodge, Hastings Condensed Milk Company of Hastings, The Piper Ice Cream Company of Grand Rapids, Waganaar & Hamm of Holland, The Michigan Cream Company of Lansing, and Freeman Dairy Company (Jackson Branch.)

The Connor Ice Cream Company, organized in Owosso 40 years ago, built up itself until it covered also Ann Arbor, Bay City, Alma, Flint, Pontiac, and Richmond. This chain included the Ovid Cream Co. and the Connor Fountain Supply Company of Owosso, makers and distributors of soda fountain supplies and fixtures.

According to officials, the trade names, "Arctic" and "Connor" will be continued in use in the same territories in which they have been used in the past, each has earned the good will of its public to such a degree as to make it unwise to discard either.

The inclusion of the Connor Ice Cream Company has brought about several changes in the personnel of the Arctic organization: H. A. Tremaine remains as president; Glen P. Cowan becomes chairman of the executive board; John J. McDonald (of Connor) becomes general manager; H. A. McDonald remains as general sales manager; W. A. McDonald (of Connor) becomes superintendent of ice cream plants outside of Detroit; Peter Van Allsburg becomes superintendent of all condenseries. The directorate is made up as follows: Tremaine, J. Robt. Crouse, Glen P. Cowan, A. F. Stevens, Jas. V. Oxtoby, W. C. Lerchen, all of Arctic, J. McDonald, James Oliver Curwood, and C. P. Beardsley, formerly directors of the Connor Ice Cream Company.

The Arctic Ice Cream Company now will be in a position to serve over 80 per cent of the urban population of the state of Michigan, according to officials. The total assets of the company are well over \$4,000,000, they say.

The purpose of the expansion of the Arctic Ice Cream Company is to bring about the obvious advantages of larger volume production and to put into effect advantages of distributing from strategic points to wide areas.

One of the first steps in the handling of urban cities, will be the equipment of all retailers with Automatic Electric Cabinets.

The Nizer machine, which has been developed during the past four years, is produced by the Nizer Corporation of Detroit, a company affiliated with the Arctic Ice Cream Company. It is counted upon greatly to stimulate the volume of business of the company, as well as materially to reduce wholesale handling and transportation costs.

You can find the person who will be glad to buy your product, or you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

Minutes of last general meeting, November 18, 1923, read and approved.

As the treasurer's report, in the absence of the treasurer, the General Secretary read the condensed financial statement of the association issued in November:

On hand November 1st, 1913.....	\$1,078.73
Receipts	191.74

\$1,270.47

Disbursements	644.21
---------------------	--------

Balance on hand Dec. 1, 1923....	\$ 626.26
----------------------------------	-----------

Attention was called to the amount of the receipts and an explanation given showing that 25 per cent of the membership have been receiving for their monthly dues against a portion of their dues paid earlier in the year. It was moved and seconded that the treasurer's report, as given by the general secretary, be accepted and filed. Motion carried.

The general secretary read his written report covering the period of November 15th to December 18th, the body of which is here given:

"In addition to the routine office duties, a representative of the Ohio creamerymen was attended in Cincinnati. The purpose of this meeting was to decide whether a four-day grading plan would be rigidly adhered to if the time lengthened to seven days, as has been the case in the past."

No Competition for Contractors

BUILDING contractors can feel absolutely safe in bidding on cold storage jobs complete, including insulation, if they figure on using Non-Plus-Ultra Pure Compressed Corkboard, for it is our unvarying policy to work with contractors instead of competing with them.

NON-PLUS-ULTRA Corkboard

is manufactured in the largest cork factory in Spain, equipped with the most modern machinery. Nothing but specially selected, clean, dry stock is put into these sheets. This is thoroughly and uniformly baked through and through, producing sheets of exceptional strength and durability.

The edges and corners are square and sharp, which insures tight joints. Sheets are carefully crated at factory so they arrive on the job unbroken and without corners or edges knocked off.

Booklet and full particulars on request.

Packaged Goods SELL

EVERYONE agrees on that, but only a few realize just how important a part the design of a container plays in increasing or retarding sales.

Analyze your present carton. Look it over carefully. Then, if you are dissatisfied with any feature from design to price, give us the opportunity to show you the worth of Character Cartons.

We know you can save money and get more "carton value" for your money by using Character Cartons—and we are ready to prove it even on small quantity orders. Sutherland Paper Co., Kalamazoo, Mich.

N. B.—There are a number of good-looking stock designs in Character Cartons that might fill your present needs. Ask for samples. These designs can be skilfully imprinted with your name so that the whole carton appears as one made entirely for you.

Where Character Cartons are made

The Sutherland plant covers 4 acres of floor space and has the most modern equipment scientifically arranged to speed production. This is one of the reasons why higher-grade Character Cartons can be furnished in small quantities at a low price.

Indiana, Illinois and Kentucky, for the winter months. It was unanimously voted to continue on the four-day grading plan.

"While in Cincinnati, we were present at a conference between F. J. Bahl, Tri-State Butter Co., and Harry Hartke, of the Pure Milk Co-operative Association of Covington, in regard to dairy condition in general.

"In Newport the Hiland Dairy Co., The Feldman Milk & Cream Co., The Newport Dairy, The Cloverleaf Dairy and the Louis Trauth Dairy was visited.

"In Covington the Summe & Ratermanr Co., and the Steffen Dairy Co. were visited.

"In Latonia Bergman Bros., H. B. Bosse & Sons and the Crescent Dairy Co. were visited.

"While visiting the milk distributors of Covington, Latonia, and Newport, aside from discussing local and state wide conditions, they were especially urged to attend the general meeting of this association today.

"In Louisville, in company with Mr. Schimpeler, of the Standard Milk Machinery Co., the Gray-Von Allmen Sanitary Milk Co., Kentucky and Indiana Dairies Co., The E. K. Mack Creamery Co., Finley Bros., Louis Kaelin, A. L. Carrithers & Sons, H. C. Theilmeier, Wm. F. Theilmeier, The Shawnee Sanitary Milk Co., and Henry Neimeier; all milk distributors and dairy products manufacturers of Louisville were visited.

"At Owenton and Carrollton, in connection with called meetings of the creamery field men, conditions surrounding the execution of the time limit delivery plan for cream have been studied.

"Under the direction of the executive committee, and in company with several ice cream manufacturers, the Southern convention of ice cream manufacturers was attended at Little Rock, Arkansas. This trip was es-

pecially beneficial in creating a better acquaintance some of our own membership, as well as familiar ourselves with the problems of the ice cream industry of the South. While at this convention there was an opportunity to enlighten the ice cream manufacturers of the South and the representatives of the various supply houses interested in the development of the South, with the work that is contemplated by our Products Association.

"At Indianapolis, we were present at the annual meeting of the Indiana Manufacturers of Dairy Products December 14, and represented our association on the program of the butter division, with an address on 'Pulse of the Farmer.'

"Acting on the complaint of one of the creameries as to the form of milk and cream way-billing used by one of the railroad companies serving Kentucky, it was thought advisable to call a meeting of all the general baggage agents of the various railroads interested in Kentucky, and to this end January 22 has been suggested as a tentative date for a joint meeting of railroad men and our association. It is hoped that membership will find it convenient to concur with suggestion for January 22 as the date of our next general meeting."

Motion made and seconded that the General Secretary's report be accepted and filed. Motion carried.

The president called for a report of committee especially those appointed to gather data as to any legislative action that might be needed for any one of the three auxiliary groups of the association. After a brief discussion it was thought advisable to delay further consideration of legislation, pending the address of Miss Sarah H. Vance which she would undoubtedly give in her address, from the luncheon table, to the association.

The associate membership dues and the voluntary classification that is left to the decision of prospective associate members, were discussed from a standpoint of fairness and propriety. Views were gotten from several men on this subject and they concurred with the views of the active members.

It was moved and seconded that original committee on constitution and by-laws be instructed to prepare an amendment to Article XI of the Constitution annulling the present classification of associate membership and substituting one class for all associate members at twenty-five dollars per annum, payable in advance. Motion carried.

It was moved and seconded that January 1st, of next year, be made the fiscal date for the annual association membership dues, and that the dues of new associate members, those coming into the association later in the year, shall be pro-rated according to the number of months remaining in the year. Motion carried.

It was moved and seconded that the president appoint a committee of supply men to solicit associate members. Motion carried.

The president appointed C. Mortensen, L. F. Brown, S. A. Smith as a committee to solicit associate members.

The matter of designating one or more trade papers as the official organ was brought to the attention of the association. After some discussion it was thought advisable to have an official organ for each division of the association. It was moved and seconded that "The Ice Dealer," the "Butter, Cheese & Egg Journal" and "The Ice Cream Review" be made the official organs of the respective auxiliary divisions of the association. Motion carried.

J. O. Barkman, representing Dean Cooper of the College of Agriculture, invited the association to hold

Leffel Scotch Marine Boilers

BECAUSE they require less room and are more powerful than other boilers of the same size Leffel Self-Contained, Internally Fired, Horizontal Return Tubular, Portable Boilers are highly desirable for use in Creameries, Dairies, Ice Cream Factories—Milk Handling Plants of all kinds.

They are perfectly safe and require little attention and meet requirements of all State boiler laws. Sizes 6 to 100 H.P.

VAINILLA MEXICANA

WITH the ring of a big, prosperous year in everybody's ears, the coming ice cream season will undoubtedly be the greatest in the history of the industry. There is surely going to be a bumper sales volume for those manufacturers who take the initiative in appealing to the public taste.

You'll have a decided advantage if you use HUDSON'S No. 52 SPECIAL because its flavor is outstandingly popular. Its purity and strength is also an important factor of economy. It has the reputation of keeping sales volume up and manufacturing costs down.

Let us ship you a sample keg of No. 52 SPECIAL extract or a sample gallon of Hudson's Concentrated No. 52 —Express or freight prepaid to your city. You may return same at our expense if not entirely satisfactory.

next meeting in Lexington during the Farmers' Week exercises.

It was moved and seconded that the next general meeting of the association be held Thursday, January 31st, at the Phoenix Hotel, Lexington; having lunch at 12 M., and the meeting starting promptly at 1 P. M. Motion carried.

Meeting adjourned for lunch.

From the luncheon table, Miss Sarah H. Vance, director, Bureau of Food, Drugs and Hotels, State Board of Health, discussed her work throughout the state as it pertains to the manufacture of dairy products, pointing out various technicalities and clearly showing where the manufacturers of dairy products and the state board of health could accomplish many desired results through educational channels rather than relying entirely on the rigid enforcement of the law.

Following Miss Vance, E. K. Slater, Olsen Publishing Co., Milwaukee, Wis., gave some of his experiences with the different branches of the dairy industry. R. W. Seearce, manager, Kentucky Live Stock Improvement Association, also spoke on the plans and purposes of his organization and its relation to the dairy products manufacturer.

After round table discussions of the auxiliary groups the general meeting was again called to order by the president at 4:45 p. m.

The proposed articles of incorporation for the Dairy Products Association of Kentucky were read, discussed and adopted the article, and then adopted as a whole, with a few minor changes as made in the adoption by article.

It was moved and seconded that the articles of incorporation be filed as adopted at this meeting. Motion carried.

On account of the lateness of the hour further business was dispensed with, and it was moved and seconded that the meeting be adjourned. Motion carried.

DEPARTMENT OF COMMERCE BOOK TELLS SUPPLY MEN'S ASSOCIATION.

"Trade Association Activities," a book compiled by order of Secretary of Commerce Hoover, comprising definite government sponsorship of legitimate trade associations, as well as being the most complete authoritative account of the functions and activities of associations yet published, refers to The Association of Ice Cream Supply Men, together with other leading associations of the country.

In a chapter on "Trade Disputes and Ethics," The Association of Ice Cream Supply Men, and the National Association of Ice Cream Manufacturers are mentioned. This chapter says:

"Some trade associations have provided a guide for proper trade relations and thus have offset the hood of disputes by the adoption of codes of ethics. The nature of such codes is definitely to set forth: unfair practices of sellers against buyers; and unfair practices of competitor against competitor. codes of ethics or fair practice are essentially statements of business principles in reference to the transactions of the particular trade or industry as the association of these principles. The Association of Ice Cream Supply Men, the National Association of Ice Cream Manufacturers, and the American Bakers' Association have developed this particular phase of trade relations through codes of ethics rather completely."

The book has recently been issued by the Department of Commerce.

ICE CREAM SCORING TO BE FEATURE OF DAIRY SHOW.

Ice cream will be included in the students' products scoring contest at the National Dairy Show next year. This was assured before the last show hardly over, college officials in charge of the dairy products judging contest being almost in unison in wanting ice cream to be included.

Ice cream never has been a feature of the judging contest at the national show exhibition. The one reason given is lack of a suitable score card and system of grades and standards for ice cream. Prof. F. Fischer, assistant professor of Dairy Husbandry, Connecticut Agricultural College, Storrs, Conn., has proposed a score card and system of grades and standards that has been used in the Eastern States Exposition contest for the last two years, as well as in the national ice cream scorings at the Massachusetts and Connecticut Agricultural colleges. He says they have proved very satisfactory.

The cost is little, the results are quick and satisfactory, "The Review" Want Ad way.

Thurstan Runyan was named chairman of the auditing committee. The secretary-treasurer's reports were followed by a roll-call of active members, after which the secretary called the roll of associate members.

Mr. Meyer then read the proposed code of ethics, as follows:

Arkansas Ice Cream Manufacturers' Association Code of Ethics.

Believing my vocation to be worthy and honorable, and with sincere desire to raise the standard of my business, thereby raising the standard of the industry I represent, I hereby subscribe to the following CODE OF ETHICS.

1st. I shall at all times conduct my business in such manner as to reflect credit unto myself and the ice cream industry.

2nd. Knowing that my products are recognized by the state and national governments as food products, it shall be my pleasure and duty to maintain a clean and sanitary plant at all times.

3rd. I pledge myself to use nothing but the purest of standard ingredients in the manufacture of my products.

4th. I shall endeavor to be fair and honest with my patrons, employees and fellow manufacturers at all times, rendering to them maximum service and loyal co-operation.

5th. I believe it to be a duty and honest obligation to return to the rightful owners cans and tubs coming into my possession, seeing that while they are in my possession they are given the same care as my own.

6th. To the supplymen calling on me with their wares, I shall be courteous and friendly. And it shall be my endeavor to favor those supplymen and firms that sell me their wares at the same price as they do the brokerage and wholesale firms.

7th. Knowing that my business cannot be successfully conducted unless a fair return is made on my investment, it shall be my purpose to charge a fair and reasonable price for my products. My desire shall be not to undersell my fellow manufacturers but to contend with them for first place in the quality of my product and the service I render my patrons.

8th. I will not give away goods or supplies or samples other than is customary in such quantities as to hamper and embarrass competitors, or in such volume as to have the effect of giving a rebate.

9th. I will not discriminate in prices between different purchasers or different localities, based upon other than legitimate cost, sales and delivery consideration.

10th. I not only pledge my own membership to my state organization, but will strive to induce others to join, I consider it a moral obligation to attend the conventions and work in harmony with the members and officers.

I. O. Hughes suggested that a committee be appointed to consider the code and then to report its views for the consideration of the members in open meeting. Upon mention by "Will" Terry the president appointed a committee with himself as president and including the following: George F. Cress, I. O. Hughes, J. D. Purdy and Craddock Goins.

A committee to audit the treasurer's report was then appointed as follows: Charles Hooberry, Thurston Runyan and George D. Rumrill. The committee on resolutions included R. L. Hargrove, Charles Hooberry and W. L. Hewgley.

The president deferred the election of officers and selection of next meeting place for the afternoon session. Secretary Meyer, before the close of the morning session, dis-

William F. Baird Company

OFFICE: 401 Chamber of Commerce, BOSTON, MASS. FACTORY: WINCHESTER, MASS.

cussed the status of the proposed ice cream bills. He pointed out that the legislators were in earnest about getting revenue with which to carry on Arkansas' program of education.

He urged upon the members the necessity of manufacturers standing together in the campaign to instruct the legislators about the status of ice cream as a food. He said the manufacturers should enlist the co-operation of their dealers in this work. The dealers could get in very effective work by calling up their representatives and explaining to them that ice cream is really one of the important things about the schools, since parent-teachers' associations are having it served in class-rooms. It should be impressed upon the legislators, said Mr. Meyer, that there is little use to try to raise money for schools by injuring an industry which produces a product so valuable to the school children.

To G. A. Meyer.

Whereas, our esteemed secretary, G. A. Meyer, is forced to relinquish the post he has held with such loyalty and ability for four years; and,

Whereas, Mr. Meyer will not be able to give us his active services in the coming year; be it therefore,

Resolved, That this association accept with sincerest regret our esteemed secretary's resignation and extend to him our warmest thanks for the splendid services he has performed for this association and the ice cream industry of Arkansas.

Adopted by Arkansas Ice Cream Manufacturers' Association, at sixth annual meeting, Little Rock, December 3.

Mr. Olmsted of Hot Springs said the school bill is important, and that it is a good plan to be ready for a hard fight, as the legislators know that the Arkansas schools must have relief but do not know that it is unfair to make the ice cream people bear the burden.

Cannot Tie Up With Bottlers.

Mr. Rumrill said cold drinks are more or less of a luxury but the rights of ice cream to be immune from taxation should be fought out on the product's merits as a food. Secretary Meyer stated that this was the basis of the fight during the year, but he said the cold drinks people could not bear up their arguments for food value.

"Will" Terry expressed the belief that tying up with the soft drink people would not do the ice cream industry any good, since soft drinks are more or less a luxury. He urged the members to write to the men to whom they ship, and get them to write their representative or phone them their opposition to any bill to tax ice cream. He suggested that "a good committee" be appointed to wage this fight. Mr. Terry made motion that the incoming board and officers act as a committee to handle the fight.

After the association had lunch in a body in the Marion dining room, committee meetings were held before the open-

Jacob Noodleman and one of the Mexican monkeys he donated at Southern convention to be auctioned for the benefit of the Ladies' Auxiliary.

ing of the afternoon session. Craddock Goins of The Ice Cream Review reported to the association that the committee on the Code of Ethics heartily endorsed Mr. Meyer's document and did not recommend any material changes, though it was possible that some addition could be suggested. Acting for President Watson, who was chairman of the committee, The Review man read the Code of Ethics by sections. After some discussion the code was adopted.

Election of officers followed. R. L. Hargrove, for many years active in association work in Texas, Oklahoma and Arkansas, was elected president. G. A. Meyer was unanimous choice for vice-president, and Charles Hooberry could not think of enough excuses to dodge the job of secretary.

The remainder of the meeting consisted of compliments to outgoing and incoming officials.

It was the sentiment of the delegates that the sixth annual convention had witnessed some very constructive work in the interest of the industry. Considering the fact that they had to think of taking care of their visitors from other states while deliberating over their own problems, the Arkansans feel well satisfied with the 1923 session.

Little Rock was selected for the next convention. A board meeting followed the session.

"GMC trucks are seven steps ahead"

Greater Daily Mileage at Less Expense

The success with which GMC trucks serve as distributors of ice cream is typical of GMC capacity for uninterrupted daily heavy duty service. With a surplus of pulling power beyond its rating and extra strength in every chassis part GMC is able to carry full cargoes day after day over every kind of road and grade. Moreover GMC has a speed on good roads that assures the greatest possible mileage per day. Combined with this power and speed is the economy of operation and maintenance that only GMC can offer.

Full information on GMC trucks with detailed explanation of exclusive GMC features and what they mean to owners is given in an illustrated booklet "Seven Steps Ahead." Send for one of these books and see how GMC can make and save more money for you. Just fill and send in this coupon and your copy will be mailed immediately.

Southern Convention Proceedings

(Continued from January issue)

“WHAT I hope to see accomplished through the adoption of the quality standard is this: “If we can deliver this message to the ice cream consuming people and live up to it, as I hope and believe we will, it will inspire the whole people with the products of the Southern ice cream manufacturers, thereby increasing the sale of ice cream.

“Furthermore, it is the duty of all producers of food articles to make the very best and purest article that can be bought, regardless of whether it is ice cream or what not. I have always followed this idea myself and I believe it has paid.

“If we can bring this message to the ice cream consumers in the way that I meant it, it will benefit both the people and the ice cream manufacturers.”

—Statement to The Ice Cream Review by Southern Convention President M. J. Costa of Athens, Ga.

At this time the president stated that at a meeting of the old board of directors that morning they agreed to recommend to the new board of directors, that the association hold its meeting at New Orleans just preceding the national association meeting.

Applause.

President: The next speaker on the program is S. N. Sutton, whose subject will be “Advantages of Membership in Trade Association.” Mr. Sutton.

Mr. Sutton: Mr. President, Members of the Southern Ice Cream Manufacturers’ Association, Ladies and Gentlemen: When I was first notified that I had been

placed on the program to prepare a paper on this subject, and realizing the many benefits that had come to the ice cream industry from the activities of the association through past years, I felt that it would not be a difficult matter to prepare a paper that would pretty well cover the subject, but when I sat down and attempted to write it, I realized it is a very, very broad subject. In fact, almost every talk we have had is along the lines of my thought, when I attempted to prepare a paper on this subject. The talk that we heard from the governor, the secretary’s talk, and the president’s address, were all along the lines of the benefits which we have received.

* * * * *

Advantages of Membership in Trade Associations

By S. N. SUTTON

THE idea of joining hands with our fellow manufacturers or co-operating with him through trade associations has brought about many beneficial results, and has been one of the chief reasons for the rapid growth of the ice cream industry in the United States during the last few years. Throughout our industrial history there is not a case on record where harm came to anyone on account of a spirit of co-operation existing between him and his competitors.

Some say, “I do not see any advantage of belonging to an association, I am a small fry and would not get anything out of it.” Those men have never belonged to any associations and hence they are honestly mistaken. Because the small fellows are getting just as much benefit from the associations as are the larger ones.

We sometimes hear it said that it is useless to send certain boys to school because they are not getting anything out of it. Is that the fault of the school, or is it the fault of the pupil in failing to grasp the things that are offered him in school?

Prosperity usually comes to the fellow who has the ability to avail himself of the things which the other fellow has learned through his experience. No one of us is smart enough to be able to know the correct solution of every problem and how to avoid making any mistakes without getting a little information from those with whom we come in contact. And we can greatly benefit ourselves by taking advantage of the opportunity to check up on the new developments which are continually unfolding to those who are striving to perfect the methods, arrangements, equipment, and product of the industry to which we so proudly claim membership.

Our associations are like great clearing houses through which our experiences, ideas, griefs, and diffi-

culties of all kinds can be adjusted. And by laying our cards on the table along with the other fellows, exchanging ideas and reasoning things out from the other man’s point of view we can often save ourselves many dollars.

“More bone in the back and less in the head” was the motto suggested by one speaker at a recent convention. And I think that if we would guard against this hard-headed, obstinate, selfish thought which is so often getting us into difficulties we would be better off in many ways.

Our secretary’s office has done splendid work during the past year in several cases where unharmonious conditions existed but to correct which called for a disinterested and impartial man to show them their mistakes and their solution. And in each instance matters were adjusted to the satisfaction of all. These benefits were received by non-members as well as by the members, but it is up to us to give credit where it is due, and we believe that these things could have hardly been accomplished without the assistance of our secretary’s office. The letters and bulletins gotten out at different times throughout the year always contain valuable and timely information. In several state legislatures bills abnoxious to our industry were defeated through the prompt assistance rendered by the officers of our association. Not long ago the petition of the express Company to raise the billing weights on ice cream approximately 15 per cent came up for hearing before our railroad commission and it is needless to say that if we had not been in a position to get certain facts and evidence from our Southern and National secretaries we would not have been able to win our case, at least as easily as we did.

The secretary of commerce in a recent statement regarding trade associations generally said, “Legitimately formed associations have contributed greatly to the

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

* * * * but VANILLA
goes on forever!

To twist an old saying: "Flavors may come and flavors may go, but VANILLA goes on forever." Rightly so. There is no other flavor, year in and year out, that tickles the taste of ice-cream lovers like good, old VANILLA.

But it must be REAL Vanilla. Not "second-cousin" vanilla. To be sure of mellowness, smoothness and rich deliciousness, to obtain the demonstrated, business-building flavor use

MICHAEL'S Mexican Vanilla Powder

PHILADELPHIA TYPE

makes no attempt to conceal the evidence of the bean. The standard for French and "Philadelphia" ice-cream.

NEW YORK TYPE

The same Vanilla put through a process which prevents the bean from showing in the finished ice-cream.

Make This Test at Our Expense

Place a trial order. Use all you need to give it a full, fair trial. If MICHAEL'S Mexican Vanilla Powder does not produce the finest Vanilla ice-cream you ever tasted, return the remainder at our expense, and we will cancel the charge. Do this, by all means.

improvement of business morals and practices, have cheapened our production and distributions, have improved working conditions, have by statistics they publish of production and distribution enabled the whole commercial public form safer judgments as to their future policies. They have contributed to the advancement of our foreign commerce and generally they have interested themselves in our economic welfare. These services should be preserved and even better organized."

The position which ice cream occupies today among the national industries is largely the result of the progressive ideas, and the great amount of work done by the officials of our national association in their untiring

effort to secure proper legislation and enforcement of the laws that safeguard the public health, and thereby bring our product to an uniform high standard.

The ruling of the War Industrial Board which declared our industry an essential business and thereby saved our sugar and supplies from being cut off was brought about through the activities of our associations, as well as was the repeal of the war tax on ice cream cones.

Such matters as a national campaign to advertise ice cream, uniform cost accounting systems or industrial laboratories must necessarily be handled through some such medium as our associations if they are going to result in any permanent good to the industry.

The opportunity to meet with the supply men and make an impartial comparison of their wares is better afforded through our associations than any other way I know of. To be able to sit in our conventions and listen to the discussions on the various topics and problems that confront the different members of the industry and in this way get the latest and most up to the minute ideas is in itself worth all it costs to be a member.

It is said that "competition is the life of trade" and "co-operation is the breath of that life." But in order to be able to stem the tide and keep ourselves from floating down the stream with the dead ones, we must be in a position to keep posted on the very latest and best ideas that are being developed by our wide awake fellow manufacturers.

The man who does not become a member of our association is losing much that will help him to gain a better knowledge of his own business, by enabling him to compare the different ideas presented, and get pretty definite information how he can save on the cost of production by the installation of various kinds of machinery and equipment that have stood a satisfactory test by others.

Those that stick too close to their business are apt to lose sight of the big idea, or perspective which enables them to analyze their problems properly and thereby gain the inside track on what to expect for the coming season. And also be able to avoid the trade abuses that so often plunge the manufacturers into warfare of various kinds.

Throughout the North and East nearly every manufacturer is a member of his association. And that is one reason why they have been able to keep ahead of this part of the country on the per capita sale of ice cream. Every manufacturer is timber for our association and if each one of us will make sure that he brings

One of Our Many Drying Wheels

When filtered, the liquid Gelatine is hurried to these great wheels and after a single turn is dropped directly into barrels. Our patented process requires less than one-half of one per cent of the time usually necessary to dry Gelatine.

Dried Gelatine

in at least one new member between now and our next meeting, that alone will mean a great boost to our membership. Nobody can afford to miss the meeting at New Orleans next year if its importance is properly explained to him.

There we will not only meet the manufacturers from all over the South, but from all over the United States as well as many foreign countries. At the same time we will be able to visit and inspect the greatest exhibition of modern dairy and ice cream machinery and equipment that has ever been staged in the Southland.

To meet our fellow manufacturers at these conventions and rub shoulders with them in a social way means a lot toward eliminating the old idea that our competi-

tors have horns and are just a bunch of unprincipled scoundrels that stand in the way of our advancement. Often ties of good fellowship are formed from which we get a great deal of pleasure.

However we must not lose sight of the fact that we have work to do here. And if we do not put something into these meetings, we can't expect to take much away. Any more than the school boy can expect to stand at the head of his class unless he applies himself to his school work. So in conclusion, not the least advantage to be gained from membership is by getting on the job and attending all the sessions of the convention, and you will go home with a lot of new ideas gained that will mean money to you during the coming year.

Why the Business Man Should Attend all Meetings of His Trade Organization

By W. W. CAMPBELL

WE may have different ideas "Why the Business Man should attend all the meetings of his Trade Association." I shall attempt to give you a few of the reasons as I see them and hope in the discussions we will bring out many more reasons why our members should attend the meetings of this association.

All trade associations are formed primarily with the same objects in view, more especially this one of ours. First, to promote and safeguard the common interests of its members. Second, to establish and maintain friendly relations among those engaged in the manufacture and sale of ice cream. Third, to take united action upon all matters affecting the welfare of the trade at large.

Every live, progressive ice cream manufacturer should identify himself with his trade association, because it unifies and represents the constantly expanding ice cream industry, it keeps in constant touch with all important legislation and furnishes to all its members authentic information on all matters of importance to them. At our trade meetings these matters are discussed and plans outlined to meet these conditions as they arise.

What has the association done? Just a few questions might bring to your minds what the association has really done for you. Are you not in every way better satisfied to be in business today than you were several years ago? Have you not a better standing in your community? Are you not making as much or more money than you did several years past? Is not your business on a much firmer foundation and on a much higher plane than it has ever been? I am sure if these questions were asked each of you by any business man your answer would be in the affirmative. The next question is: Have you done your part? Have you attended your trade meetings and taken part in its deliberations?

To conduct an association it requires a membership that will help carry out the principles as set forth in its constitution and each member to do his part and help supply such funds as will enable the organization to function as it should. It is your association so give the officers your hearty co-operation and support.

There is no person in any line of industry that fulfills his obligations to the public at large who does not attend the meetings of his trade association. Meeting men in your own line of business puts you directly in touch with your competitor. The friction in your mind against that of a competitor sharpens your conception of what you are doing as against his way of doing it. The friction between two minds, having the same inspirations, but possibly working from different angles, naturally sharpens both minds, so that while your competitor may gain something from you, you are bound to get something from him. This does not mean following his line of constructive thought or copying his method but is a mental cock-tail. There is a natural stimulus when many minds having the same basic thought are brought together. The psychology of this is apparent whether one is a believer in the transference of thought or not. The will to do this or that, being in numerous minds is brought to affect all minds present and add force to the thought, for that reason, the progressive manufacturers of ice cream come together annually

discuss new methods, economic conditions, and the best possible means of improving our industry.

For purely business reasons it is well to mingle with men of one's own business. The time for concealment of methods in business is past. A free interchange of ways of bettering things or improving products, is a motive that move men's minds in trade meetings. The progressive manufacturer of today who has worked out some problems for the betterment of the industry if different from what it was some years ago, he is glad and willing today to give to those in the industry the benefit of his knowledge which will help to promote and elevate the ice cream business. It is through the co-operation of the ice cream manufacturers, one with the other, and the supplymen, that we have been able to make the advancement in the ice cream industry that we have in the past several years. It is through the trade association that we have put ice cream no longer as a luxury, but as one of the most essential of foods. Science and necessity have taught us many things about food, some things we once thought as indispensable as food we have since found wholly unnecessary, others we thought of only as luxuries we have found are food necessities. Ice cream has been found to be an essential food. Science and actual experience both in the home and hospitals have proven it to be a necessary and nourishing food. These things have all been made possible by our trade associations.

Don't Judge Hastily.

When a competitor shows a greater advance in business than you, don't say that he used underhand methods or that he hasn't played the game fair, possibly he has done deeper and better thinking than you. Meeting him at trade conferences may reveal his

methods whether intentionally or not, at the same time it supplies a tonic to your mind.

Concealment of your business methods or ways of bettering the trade reveals the fear that you are not as strong as others in your trade.

Loyalty to your organization should spur you to attend your trade meetings, take part in their deliberations, and I am sure that you will derive a great benefit. No manufacturer can say that he can not spare the time or can not stand the expense of attending these meetings and be content to let the more progressive men carry on the work of the organization. It has been my experience that a man generally gets out of an organization what he puts into it. If he puts nothing in, he certainly cannot expect to get anything out. Your organization is a basic institution, and all who belong to it must derive a benefit from whatever concerted action results. There is no other way of which a full concert of action can be had.

The annual meeting of the ice cream manufacturers together with the supplymen is looked forward to by the majority of those engaged in the industry as one of the greatest and most educational events in the year's work.

Trade organizations are necessary in any line of industry. It is through these associations that the public is protected from unscrupulous methods in the manufacture of food products and advertising that is misleading to the consumer.

We are building every day
In a good or evil way,
And the structure as it grows
Will our inmost soul disclose
Until in every arch and line
All our faults and failures shine.
It may grow a castle grand
Or a wreck upon the sand.
Build it well what 'er you do;
Build it strong and straight and true.
Build it high and good and broad,
Build it for the eye of God.

Having attended these trade meetings for the past several years I know of no reason why the progressive business man should not attend the meetings of his trade association.

* * *

At the close: Prolonged applause.

Mr. President: Clarence Holland, manager of the Board of Commerce of Little Rock, has kindly consented to make us a few moments' talk, and we will hear from him at this time.

Mr. Holland: Mr. Chairman and Gentlemen: I am only here for the purpose of registering. I didn't want you to feel that you had come to town, and we didn't even know you were here. Well, I noticed it has been somewhat cooler in town for the last two days than it was before.

(The audience didn't get that one.)

Now, I don't want to take your time in making speech, or trying to make a speech. I do want to say that we were very much gratified when Will Terr came back and let us know he had secured this meeting for Little Rock this year. I want to say, too, that personally would have shown you a little more attention, except for one reason. I saw an advertisement one time of an ice cream company, and in this advertisement they went on to say that their company was the most charitable company in that city, because they sold their ice cream at a lower price than anybody else, making it within the reach of rich and poor alike. In the

U. S. Heavy Duty Freezers

Giant 160 Qt. Capacity

The reputation of the Colonial Ice Cream Company has spread throughout the land on account of their phenomenal success in large scale ice cream manufacturing.

They decided in favor of 160 Qt. Capacity Giant U. S. Heavy Duty Freezers, only after thorough tests they made with one they had on trial in their plant under regular working conditions.

The results of these tests were surprisingly satisfactory, so they installed six at first, and after these had been in operation for some time, they added three more, the entire installation of nine as now operating being shown in the picture herewith.

Why this flying start? Why the repeat orders? The answer is to be found in the exceptional ease, convenience, economy and reliability to be had only in

This Shows the Very Latest Design of U. S. Heavy Duty Freezer Equipped with Motor Drive and the U. S. Automatic Batch Weigher.

The Nine U. S. Heavy Duty Freezers Used by the Colonial Ice Cream Co., Philadelphia, Pa.

All arranged in a row on a mezzanine floor. Note U. S. Automatic Batch Weighers, supplied with cream from floor above, and the hoppers into which the cream is dropped from the freezers to be drawn into cans on the floor below.

U. S. Heavy Duty Freezers. A few of the reasons why are to be found in the U. S. Rapid Vertical Discharge, Quick Filling Facilities, Efficient Cooling and Control, Whipping Device, and the U. S. Automatic Batch Weigher.

A more complete account of the Colonial Ice Cream Company's experience, as well as of dozens of other successful ice cream manufacturers everywhere, with U. S. Heavy Duty Freezers, are printed in full in the new 1924 catalog just off the press.

MENTION "THE REVIEW"—IT IDENTIFIES YOU.

next number of their series of advertisements, they said that they were the most philanthropic company in the city, as philanthropy consisted in conferring a benefit upon mankind, and they said their philanthropy consisted in putting more fat into their ice cream than their competitors. Now we are spending this week in behalf of Will Terry and his ice cream factory.

As I came into the room, a gentleman was reading a paper on the advantages of membership in trade associations, and that brought to my mind, really an old thought, but one which I thought I might emphasize to you for just a moment, and that is "a competent force, or what is a competent force."

It has been variously defined that it is a combination of many individual forces, and other definitions, but they all resolve themselves into this one thing, and that is the power of association. The power of association. Such as we have here. They come together at frequent intervals to exchange ideas, form new acquaintances, and these acquaintances ripening into friendships, when they begin to realize the true worth of the individuals, whether the individuals represent men, women or organizations, it uncovers the true worth of the individual.

Let me say to you that I have never known of an association of any kind organized on true business principles, but what out of it came some good to the majority of the persons and some advantage, much less to the man who does not assert himself, and become an in-

dividual unit of the competent force, and the man who has just spoken to you has well defined the reasons why every business man in this business should belong to your association.

Let me say that we are very glad to have you with us. If there is anything at all that we can do for you, during your stay here, all you have to do is to call upon us, and we will be very glad to perform the services. If you will just tell some Little Rock man what you would like to have us do, we will bend our every energy to do it, and may your stay with us be very pleasant.

(Applause.)

President: The next speaker on our program is Will Terry of Little Rock. His subject is "The Responsibility of the Manufacturer in the Production of More and Cheaper Dairy Products." Will Terry.

Mr. Terry: Mr. Chairman, Ladies and Gentlemen: I have my speech prepared here. I got a letter from Mr. Clopton a few weeks ago telling me to prepare a speech for this occasion, giving the subject, and about five days later I got a letter wanting me to send him a copy of it. I got a man to write me a paper on that subject, sent him a copy, and a few days later got a wire telling me it was all right, if I would stick to it. It is kind of hard for me to read it. I memorized it last week, but I have forgotten it this week. The subject is "The Responsibility of the Manufacturer in the Production of More and Cheaper Dairy Products."

The Responsibility of the Manufacturer in Producing More and Cheaper Dairy Products

By WILL TERRY

THE manufacturer has a double responsibility in this matter, or rather a two way responsibility. It is his duty to so arrange and manage his factory and output that a greater quantity of high grade products can be put out in the most economical and efficient manner, to the end that the consumer may receive the very best product at the lowest possible cost, leaving still a reasonable margin of profit for the manufacturer.

To accomplish this result, the manufacturer must be thoroughly familiar with the very best and most modern methods of manufacture, and the most efficient and economical methods of distribution.

It is a duty incumbent on the manufacturer, if he expects to conduct a successful business, to furnish the consumer a product that will please the consumer, and at a price that is reasonable.

Naturally, the volume of business transacted will directly affect the unit cost, so it is necessary to find a market for the largest possible output. The public generally are more interested in quality than in price, and the manufacturer should be also. That is, his first care should be that his product should be of the very best quality. He should know this without question or doubt in his own mind. Having assured himself on this point he should let the public know it, and believe it as thoroughly as he himself believes it.

Having established this basis from which to work it is important to look to the supply of raw material.

On the quality of the raw material depends directly the quality of the finished product, and this matter will receive the earnest attention of the successful manufacturer.

Having assured himself of the quality, he must look to the matter of securing it at a cost that will enable him to handle it profitably. He must also assure himself of an adequate supply at all times.

I can best illustrate my ideas concerning the supply of raw material by telling you of my own method of handling this matter for the Terry Dairy Company.

In 1917 it became evident that the supply of milk and cream in the territory surrounding Little Rock was not adequate for the growing business of the Terry Dairy Company, and that the farmers were not producing this milk in an economical manner. In order that these dairy farmers might be able to continue producing milk so that they could sell it at a profit, changes in their equipment and methods were necessary.

Dairy Literature was Distributed.

Literature describing the most modern methods of dairy farming was distributed liberally among the

farmers, and the various angles of the business was discussed freely with them at every opportunity.

I realized that these men could not continue producing milk profitably under existing conditions. I went to Wisconsin and spent considerable time studying the methods of the dairy farmers in that state. I then purchased several car loads of the best dairy cattle at it was possible to get, and brought them to Arkansas and sold them to the farmers of this community at first, and where necessary arranged with banks to finance these farmers in purchasing these cows.

The improvement in the quantity and quality of the milk supply, and the conditions of the dairy farmers, has been phenomenal since that time.

Most of the original stock of cows are still in the communities where they were placed, and with the offering of these cows the grade of dairy cattle in this section has been entirely changed.

Before these cattle were brought here, we were receiving about 300 gallons of milk daily, but this amount has increased rapidly, and now from the same communities we are receiving approximately 3,000 gallons daily.

Without this improvement in the grade of cattle and methods of milk production, the supply of milk for Little Rock during the world war and the years that followed, would have been inadequate.

The conditions that confronted the Terry Dairy Company have, or will at some time, confront every manufacturer of dairy products, and I have given you our method of meeting them.

Summing up, the responsibility of the manufacturer begins with the conditions surrounding the source of supply of raw material, extends through all the various conditions that affect efficient manufacturing operations and distribution, and ends with a satisfied consumer. No one of these things can be neglected without directly injuring the others, and each deserves and should receive his most careful consideration.

Responsibility with Manufacturer.

The responsibility for supplying the public with the very best at the lowest price commensurate with quality rests directly on the manufacturer and the life and success of the industry he represents depends on the manner in which he meets this responsibility.

The manufacturer who does not give proper attention to all the conditions mentioned above is not only inviting failure for his own personal business, but is doing an injury to the industry in which he is engaged.

The matter of immediate profits must be subordinated to the ultimate good of the industry, and the manufacturer must be able to visualize the effects of his present efforts on the general results of many future years.

The public is entitled to the very best efforts of the manufacturer to supply that public with its needs in a dependable manner, and to feel sure that its confidence in the product is justified at all times.

My idea of the intent of the word "cheap" in the sense to this address refers to the price at which goods of a dependable quality can be produced, and is not a reflection on the quality of the product. Dairy products are foods, and no one should lend his efforts to any movement that would affect the quality of any food—rather should he exert every influence at his command to better the quality and safeguard the purity of foods, for upon this depends to a great extent, the vitality and happiness of our children and our children's children. To reduce the cost of manufacture and thereby reduce the cost to the consumer without reducing the quality

of the food value should be the aim of every manufacturer.

An industry cannot reach a higher plane without every member of that industry honestly striving to better the industry by his own personal efforts and ideals. Any thing that benefits the industry as a whole will benefit each member, and any thing that tends to injure the industry will have an ill effect on each members' business.

Let us all strive, by bettering our own methods, to better the conditions of the industry generally, and the general success achieved will be felt directly by each of us.

* * *

(Applause.)

President: Gentlemen, this paper of Mr. Terry's was to be followed by Mr. Learned of Memphis, and Mr. Sancken of Augusta. Neither one of these gentlemen is here. Will someone else lead the discussion on this paper. Mr. Stuart!

Mr. Stuart: I couldn't do that subject justice. I haven't studied on it, so I couldn't do it justice.

President: Anyone else?

Mr. Clopton: Mr. President, in order to get that subject under discussion I will say that I had a letter from Mr. Learned in which he said that he didn't agree with the subject under consideration. Now possibly some of you do not altogether agree with the subject, and these are the things which we hoped to bring out in this discussion. In other words, the tone of Mr. Learned's words were that he didn't think it was up to the ice cream manufacturer to produce or busy himself with producing cheaper cream products. I just mention that as a matter of thought, and it might be well to discuss the subject a little along the line of Mr. Terry's paper. This is a very important subject.

President: Is Henry Bennett in the hall? Won't you give us a few words on this subject, Mr. Bennett?

Mr. Bennett: In regard to producing a cheaper dairy product, I wouldn't know what I would have to say about that, unless in some way to increase your volume. I think the work Mr. Terry has done in bringing cattle down from the north is something along that line that every manufacturer should do. We have done it in the past, and I think it is up to plants to better the dairies around them, and to work to increase the consumption in any way they can. Whether you can increase the consumption, or make a cheaper article or not, I would not be able to say. Certainly we want to make it better all the time.

C. A. Kent: I think it is up to the manufacturer to get his raw products as cheaply as he can, and to use all means at his command to do so. And Terry's idea and what he did is exactly along the right line. We are away behind in the dairy business in the south. We are going ahead by great strides in the ice cream industry. There is no reason in the world why the South should look to Wisconsin for its raw product. Why should we in the South look to Wisconsin for our raw products, when we have all the advantages in the world over Wisconsin. They why buy our raw products in Wisconsin and pay the freight south on it. Mr. Terry's idea is exactly right. It behooves any manufacturer to look out for his raw material, and to get it as cheaply as possible, and have it produced as close at hand as possible. (Cheers.)

President: Anyone else? This is a subject that ought to be very close to our business. Mr. Drake, won't you say a few words on the subject?

Mr. Drake: No, sir, I am not prepared on that subject. Let's hear from Prof. Baer on that subject.

Professor Baer: Mr. Chairman, I already have my speech written for tomorrow, and considerable of that address I am to deliver tomorrow is along this line greater production in the South, and with your permission I would sooner leave that discussion for tomorrow.

President: Very well, you are right about it. Any one else?

Mr. Moore (of Atlanta, Georgia): Mr. President and members of the association: It may be of interest to Mr. Terry to know, and it may be of interest to Mr. Costa to know that the subject under discussion was proposed by the speaker. I think Mr. Clopton will beat me out in this, that this subject was presented to him by Mr. Brooks of Meridian, Miss. It so happened I was in Mr. Brooks' place of business when he received letter from Mr. Clopton asking for a suggestion for topic of discussion, and I suggested this topic.

I am going to talk about this at the North Carolina convention, or rather I was intending to. I will tell you how it came about.

I happened to have lived most of my life in the state of Wisconsin, which has been spoken about here today, but I am now a Southerner, if I do live in Atlanta (Laughter.) I was talking to Mr. Landreth, the president of the North Carolina association, and he informed me that most of his product was made from material from the North, and I jumped on him with both feet about improving the markets around him, and the result of it was that I was requested by Mr. Landreth to talk at the North Carolina convention.

I was very much interested in listening to Mr. Terry's talk and his idea, and it wasn't along the line of my talk at all. I know that comparisons are odious, but I would like to tell you something about Wisconsin. It is not more than a generation ago—

President: Come up here, Mr. Brown, where we can hear you.

Mr. Moore: (Complies.) It has not been more than a generation ago when Wisconsin was in the same difficulty some of your Southern states are now, due to the fact that it was a one crop country. Our major crop was wheat, and along came a pest which is as bad or worse than your boll weevil, and that was the chinch bug. I know the last year I was on the farm we had to plow the wheat under in order to save the corn, and then we had some expert men come and preach to us the gospel of the dairy cow. And what have they done? As you know Wisconsin is the leading dairy state in the Union. The farmers in 1920, the year of depression, received over \$122,000.00 for their dairy products, and we have cheese factories making over fifty-five per cent of the cheese in the United States. We don't make as much butter as Iowa, but in general dairy products we produce more.

That didn't just happen, and didn't just grow, like Topsy, but over fifty years ago the governor called on men to form a dairymen's association. Who attended? Only seven men answered that call. But what did they accomplish? They secured an appropriation from the legislature which built the first dairy school on the American continent. It has been the means of putting this industry on a stable basis. This dairymen's association first took upon itself to push the cheese business, and they put out cheese instructors. They later they became interested in the butter business, and they put out butter instructors, of which I was one.

What is the consequence? When I was here some time ago, it was during the State Fair, I saw a piece

Final Judgment

The verdict of the public is final when it comes to the judging of food products and from their decision there is no appeal.

Quality and flavor are the dominant factors in their judgment of ice cream products and these factors are due to careful selection of good ingredients, scientific manufacture and the maintenance of strict, sanitary cleanliness throughout the making processes.

These factors of quality and delicious taste are greatly assisted in hundreds of ice cream plants where the use of

definitely protects the fine quality of ice cream products by the sweet, wholesome, sanitary cleanliness it provides throughout the plant.

Nor is this all for experience is proving every day that the quality work of this cleaner is the most efficient and economical the ice cream manufacturer can use.

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

the paper about the champion cow that produced a little over seven hundred pounds of butter annually, but they had to acknowledge that the average production was only one hundred and twenty pounds per cow.

Speaking of the scrub cows, when I was going through Florida last year, and saw the poor scrubby cows, I thought I ought to have a repeating rifle and shoot every critter I saw.

Now my idea in suggesting a topic like this was that through an organization like this, that the state could be made to see the necessity of furnishing the means to present to the people of the state the knowledge or information that science has given us for the production of more cream products per cow, and so enable you men to get cheaper products, not to grind the farmer down on the cheaper prices, but so he could make two quarts of milk grow where but one grew before.

By the way, did you see that cartoon in the paper about me? Where they called me reverend, and showed me with a Bible in my hand? Now, I am not a preacher, but in the Bible in speaking of the gospel it says, "How shall they know of this so great salvation, unless someone is sent to tell them?" Now, how are the farmers going to know about the profits in increased dairy productions, if some one doesn't tell them? You have got to take him down and chuck it into him. But this association, or any state association, have got to get together and work until the public is awakened to the fact that the success of the farmer means the success of every other line of business.

Now, in Wisconsin they have a force that carries the university to the farmer, as well as carrying the farmers' sons and daughters to the university. It is not their main idea to teach the buttermaker and cheesemaker to make a better product, but to teach the farmer how to

grow a better product. It seems to me that that is where your interest lies. And that is the thought I had in mind in getting this subject before this association, and I thank you for the opportunity.

W. W. Campbell: I would like to say a few words in regard to increasing the dairy products of the South. When I left California, I made a trip East and I visited some of the dairy section in Virginia. Virginia has always been known as a one crop state,—cotton. They have now taken to the dairy business.

Down in one section of the country a few years ago they were doing the same thing, going up North and buying dairy cattle, buying Holstein cattle, and we never made a success of Holstein cows. I visited some of the dairies of Holstein cattle, and I believe that our trouble has been that we were not feeding right. Not feeding properly. So I have taken it up with the Holstein Dairy Herd Association, and they are sending one of their field representatives to Louisiana.

He will be down some time, possibly in January. I have given him a list of the Holstein herds around Shreveport, and we hope with his assistance to get our dairymen interested in the Holstein cow, and that that will cause a bigger production.

Now, I have always had the idea, and no doubt some of the rest of you have, that the Holstein milk wasn't as rich in butterfat as the Jersey. That may be true but I see records of some thoroughbred Holsteins that their butterfat had averaged for the year over four and four and three-quarters per cent. Their production was over four gallons of milk per day at two milkings. Now I don't think we have any Jerseys in our section that will give that per cent of cream.

Banker Must Be Interested.

Another thing we haven't down South, down in our section anyhow, we have never been able to interest the moneyed man or bankers in the dairy industry. I had occasion to talk to one of our bankers, and I just made the remark, what amount of butter that one concern was sending into our city every week, and the amount of milk, condensed and dry, that was used and consumed there, and he was surprised. He had no idea of such a thing. They have always had the idea that the cotton planter could go into the bank and make a loan for a cotton crop, but when you talk to him about lending you money to finance a dairy industry it is another story. He thinks a dairy cow will lie down and die, and he overlooks the fact that the boll weevil will eat up the crop in two weeks.

So I think it is up to the ice cream manufacturers or those interested in promoting the dairy industry, to get in close touch with the financial heads and show them where it is to the advantage of the country at large to increase the dairy business in our section.

Ben C. Brown: I don't want to speak on this subject, but I think some of you are on the wrong track. The ice cream business is an individual business, a specialized business. Not a dairy business, but it is an individual business in itself. With that in mind, the thing that we can do is to co-operate with the dairy farmer. We can't go out and buy him cows, we haven't the time to do it, we haven't the money. What we can do is what they have done in Canada, to promote the dairy business, and the thing that has made it one of the great dairy countries of the world, and especially the province of Ontario. The government many years ago started dairy schools in Ontario, later than in Wisconsin.

They went further, they had dairy instructors to go out among the farmers and teach them how to take care of the cow, when she should be milked, and how to take

care of the milk, and they didn't do that in a haphazard way.

So, after all, isn't it a question of education? Why is it that the people of the North and East, and we must admit it, consume more ice cream per capita than we do in the South? Here is the reason, because most of them, of the native born American or Canadian was born with a pan of milk in their hand. I will use "pan" because I was brought up with a pan. They are brought up, they are raised on milk. Show me any child that has been raised on milk, and I will show you the best ice cream consumer you can get.

Then there is another reason. We must admit that the earning power per capita of the individual in the large cities in the East and North, amongst the whites, is greater than it is in the South.

That comes right back to the dairy interests. It is the education of the individual that counts, and until you can start back with the farmer, and show the farmer of Louisiana how to do this thing, you can buy all the cows you want to and they will let the darned thing stay out and starve. You know most of our farmers are shiftless. If you don't, I do. It is too much trouble to keep a cow. She has got to be milked at a certain time of day, and she has to be brought in in the evening and put in a stable and taken care of, and our farmers don't want to do that. It is too much trouble, and they are not going to do that until they are educated.

Of course they are going to increase, but we are not going to get the increase we should get, until our legislatures take hold of this and educate the farmers as to how to take care of the dairy cow, and how to milk, and how to care for the milk, and how to market the product. When we have that we can get more milk and cream, and get it cheaper, but not until then.

We can co-operate, we can help and we can say this, we will take their product. We will use it, we will be glad to have it, and we will give them a square deal, and give them a fair price, but outside of that I don't know of anything on God's earth we can do. (Cheers.)

C. A. Kent: I take a little exception to Mr. Brown's remarks. I believe I know a good deal more than Mr. Brown does about the dairy industry, and I want to say I don't agree with Mr. Brown in a good deal of that. He is right, the farmer needs education, and I am satisfied that all our Southern states are leaning that way, and doing what they can. I know Louisiana and Mississippi are. One of our candidates for governor, our present governor, is accused of stating on inspecting the dairy barn of the state that, "It is finer than any of your farmers have houses." It should be, because it is to be as a model, and a model should be as near perfect as possible.

I agree with Mr. Brown that our farmers are shiftless, onery cusses, but there is one thing, and that is, I notice that with the little education they had how they have improved.

"Terry Deserves Credit."

When I first went into the creamery business there wasn't a single creamery in Mississippi, but now Mississippi is shipping creamery to Chicago and Philadelphia and New York, and that is difference in the last ten or twelve years, and it is done through education. Progress in these things naturally has to come slow but I think Mr. Terry deserves a great deal of credit for his effort in trying to help the farmers in his vicinity, and it is certainly up to us manufacturers if we can't aid them financially, to get the other fellow to help them. You can't educate them much with a one man cow, that is, a cow that gives enough milk for one man's coffee, so we have to get dairy stock, and we have got to help them in procuring the stock if we can't do it ourselves. Mr. Terry was fortunate enough if he didn't have the money himself he had some friends to help him, and I think that is on the right line, if he can afford it. (Cheers.)

Mr. Brown: Mr. Kent has paid me a great compliment, gentlemen, he agreed with me before he got through.

Mr. Kent: I also said I agreed with you in part, not all.

Will Terry: I only want to make one more remark. I sold the cattle and endorsed the notes, and yesterday I collected \$64.00, the last man paid the last dollar on that ten cars.

I don't think the farmers are so shiftless!

We didn't lose a dime of it.

President: You are a good judge of human nature. (Laughter.)

I live at Athens, Georgia, the site of the State College of Agriculture, which is reputed to be the third best in the country. During the years 1921 and 1922 when the boll weevil was eating up all the cotton, everybody wanted to raise milk. They would come to me and want to know: "If I will put in fifty cows, will you buy the cream?" "Yes, I will buy all I can." "Well, can I sell it?" "Yes, you can." "What can I get for it?" "The market price." "What is the market price?" "Well, I think cream is bringing so much now and milk so much, and you can get that, when you ship it fresh, and when you ship it sour you have to sell for sour cream." They wanted to know in advance what they were going to get paid for it. They insisted on my putting in a creamery and making butter. I took that under consideration. I stand pretty close with the officials of the college, and I went to them and asked

them what they thought of the proposition of putting in a butter creamery, and he says:

"Why, we have a co-operative creamery in connection with the college, and we don't get over three or four hundred pounds of butter a week." He says: "You couldn't possibly run on that." I said: "Why don't they bring more?" "And he said: 'They haven't got the cows.' 'We were trying to teach them to put in these cows. We were showing them how.'"

Then along came 1921, 1922 and 1923, and they raised a pretty fair crop of cotton, the prices of cotton were up, and the fellows that had bought cows in 1921 gave them away, because they wanted to raise cotton.

I asked this expert why it was that Wisconsin could have such a large industry, and here in Georgia where we have the grass all the year around we have no cows. He said the reason was it takes a hundred days to raise cotton, and to raise a dairy stock and run a dairy you have to work 365 days, twice a day, and that is why they are not putting in cows. He said that if the boll-weevil had persisted a while longer we would have in Georgia a real dairy industry. But I think the main reason is, a cow has to be attended to twice a day, and

a lot of people would rather raise cotton in a hundred days, and go fishing the rest of the time.

(Applause)

Mr. Clopton: You will notice one more subject of the program to be handled by Mr. Hodges. Mr. Hodges is out of the city, but has asked that that subject be held over until tomorrow.

The secretary then made the announcements for the rest of the day.

The president then called the attention of the convention to the importance of being in the hall at the time the meetings were scheduled to begin.

The convention adjourned at 3:45 P. M.

December 5, 10:00 A. M.

Meeting called to order by President Costa. D. W. C. Yarbrough of Birmingham was recognized, and offered a motion to the effect that the members of the Dixie Flyers be given complimentary tickets to the annual banquet on the evening of the fifth. The motion was seconded by Mr. Hughes of Kentucky and was defeated on the floor. The first subject on the program was the address of S. W. Brooks of Little Rock. Mr. Brooks delivered a very able paper as follows:

Advertising

By S. W. BROOKS

I HAVE been introduced to you as an ice cream man. I presume my only right to this title is my ownership of a very small interest in eight ice cream plants. My work is professional advertising and scientific merchandising—and it is through this work with these ice cream plants that I became interested enough

to invest some of my money in an industry that is destined to become 50 times larger than its present size because you have a meritorious product the public needs and knows so little about.

You are doubtless more interested now to have my viewpoint on advertising since I speak to you in the two-fold capacity of advertising and ice cream man.

Advertising sheds a white light on that which it promotes, a light so searching as to show up sooner or later, the least rottenness that exists, whether it be product or propaganda.

The value of a machine is in the work it does—not in its nickel plating or shiny brass work.

It is wise to consider function first—then trimming. Advertising is a real production machine. Its business first, last and always, is to produce results. And the real interest of the result-seeking advertiser lies in the working part.

Advertising can never be cut-and-dried. So long as human nature remains infinitely variable, there can be no rule-of-thumb methods of advertising, for human nature is the raw material with which to work.

To define advertising in a broad and practical way, it seems to me, is to define it as printed salesmanship—and do not forget for one moment that salesmanship is the business of disposing of goods at a profit.

My friends, advertising costs real money and let us not overlook the all important fact that the only justification for advertising is that it makes money. For most advertisers it is profitable, highly profitable, but like that indefinable force called electricity, it is susceptible of misuse and unless employed in the correct way may result ruinously.

Always—the test is the profit—(resulting sales that yield an increased net margin in favor of the advertiser)—whether that profit be judged by immediate results or by the gradual results that come with the building of good will.

Profit, either direct or indirect, is the alpha and omega of correct advertising.

Although advertising is designed solely to bring

Packages Improved

Mojonnier Ice Cream Packaging Machine in use in the well-known plant of H. P. Hood & Sons, Inc., Cambridge, Mass., packaging quart cartons. Note chute arrangement for quickly conveying "Arctic Sweethearts" to machine.

Model D Mojonnier Ice Cream Packaging Machine. Patented Dec. 17, 1918, Aug. 19, 1919, June 22, 1920, June 21, 1921, and Dec. 11, 1923. Other patents pending.

This machine is the ideal machine for plant with limited brick business. Any style of carton may be filled on it either standard tuck-end carton, quarts or pints, Sealright quarts or pints, Arctic Sweethearts, Mono Service, Menasha, Sundae, etc. Fills 500 quart cartons or 1000 Arctic Sweethearts per hour.

Many users of the Mojonnier Packaging Machine have informed us that their quart and pint bricks and individual packages are more evenly filled and of a more uniform weight, than when packaged by hand; that the "rattly" old brick is eliminated entirely; and in its place, a full fat brick is produced.

The "Mojonnier" is now manufactured in seven models,—a size to fill every need. No business is too big,—no business too small for a "Mojonnier."

Mojonnier Automatic I C E C R E A M Packaging Machine

has many advantages. We enumerate four:—

- 1st. *Fills exact measured quantity of ice cream into any size or type of package.*
- 2nd. *Untouched by human hands.*
- 3rd. *Good flavors sealed in—bad flavors sealed out.*
- 4th. *Insures "fine bulk texture" in brick ice cream.*

Two hundred now in use. Write for further information and user nearest you.

profit to the advertiser, it also results in increased advantages to the consumer, and indeed this result justifies advertising from the standpoint of economic desirability.

Advertising is, after all, an educational force, when properly used (And only when properly used.) This educational force not only enlightens the public but creates a demand for your product.

Statistics show ice cream consumption very much larger in certain localities than in other. I have had the privilege of investigating this phenomenon and have found two outstanding facts that should and will eventually interest every successful ice cream manufacturer.

First—wherever the public has been educated to the real nutriment to be had in ice cream, this locality was always high in per capita consumption of ice cream.

Second, invariably where per capita consumption is high I found the highest quality ice cream sold. For example I found Pennsylvania and Massachusetts high in quality and high in per capita consumption. These two factors invariably go hand in hand—not occasionally, but invariably.

I notice from the program that I am to be followed later on by a discussion on the "Advisability of carrying more than one grade of ice cream." I sincerely hope this discussion will prove it at least advisable in that the public in this section of the country has not been educated to know but one grade of ice cream, and just between ourselves, this grade is not in my humble opinion high enough. There is ice cream and ice cream!

If we will educate the public on good ice cream advertising—I mean good advertising emphasizing good ice cream, you will find a hearty response in increased volume.

Many Economic Factors.

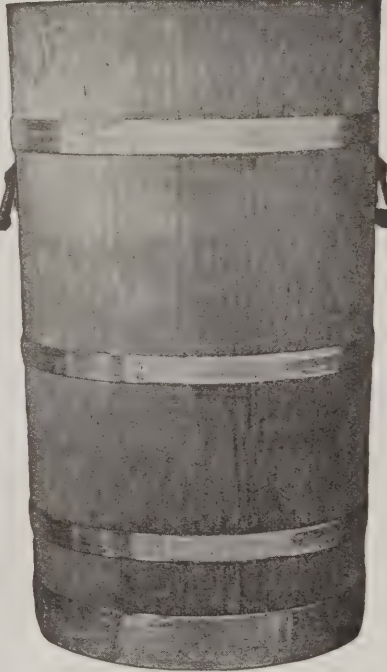

There are many economic factors at work under the name of advertising. The telephone, electric light, the automobile, the radio and a hundred other modern commodities once considered "The works of the devil," by force of the educating influence of advertising (and again I say advertising is nothing more or less than an educating influence) these commodities have come to be known as actual necessities of modern-day life. They are necessary because they have become a part of the warp and woof of modern business.

What does any article cost? The cost of an article involves the calculation of raw materials, labor, overhead expense selling costs, distributor's discounts and retailers' profits.

Let us take a concrete example: A plant doing a business of approximately \$100,000 annually has probably a fixed expense account of approximately \$30,000. Most of you realize that the average cost of doing business would place the fixed expenses of a \$100,000 business at even more than 30 per cent or \$30,000. Counted in the fixed expenses of this typical business, we can very easily recognize the fact that the items of rent, power, labor, etc., would be no higher if the annual volume of the business was \$175,000.

If this same business would employ \$10,000 advertising annually in a judicious manner, it could easily expect to increase its volume from \$100,000 to not less than \$150,000.

When fixed expenses of 30 per cent or \$30,000 on a business of \$100,000, an advertising appropriation of \$10,000 would easily increase the volume to \$175,000, and a calculation would reveal a selling expense of 22½ per cent instead of the former selling expense of 30 per cent. Let us be more specific. A certain plant I

The Texas Barrel Company

is still manufacturing the best Ice Cream Tub on the market. Our increased sales assure us of that fact.

We were the pioneer makers of the TALL TUB and all other makes are imitations. While we are improving this TUB all the time, our imitators are content to stand still and hang on.

Before ordering Ice Cream Cabinets see the new style Cabinet we are manufacturing. Will keep cream in frozen state for 48 hours with one icing. It has many advantages over the old box Cabinets.

Equipped with casters and handles and easily moved from one position to another. Does away with leakage and water wastage.

*We handle a full line of ice cream cans in all sizes.

An 8,000 pound "Simplex" Double Holding Tanks Regenerative Pasteurizer in N. Y. State shipping station. Pasteurizes 40,000 to 60,000 pounds of milk daily. The newer outfits have three holding tanks.

The installation shown above has operated over six years and handles 600 to 700 40-quart cans daily. It has lately been increased to 12,000 lbs. per hour capacity.

Positive Holding

THE milk is first heated to a pasteurizing temperature by the Simplex double tube heater. It is then subjected ten minutes each, or thirty minutes in all, to a heat treatment in the three holding tanks; then passing over a Simplex continuous surface milk cooler and directly into milk can or bottle filler.

Each holding tank is double; and milk must pass **twice the length** before leaving the tank.

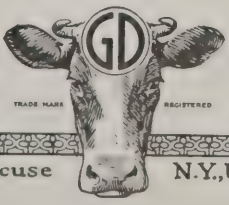

The Simplex patent regenerative heating and cooling water system saves from 50% to 60% of the steam that would be required without it. This means economical operation.

The Simplex Positive Holding Tank Pasteurizer is equally adapted to large and small plants; requires very little floor space; is dependable and fool-proof; and gives the small milk dealer **exactly the same efficiency** as enjoyed by the largest milk plants. We fully recommend them. Write for details and prices.

Sectional view of holding tank. Equivalent to one single tank of twice the depth, or two plain tanks.

have in mind was doing a business of \$125,000 annually. This was three years ago. The total amount this plant expended in advertising amounted to less than \$500 for the entire year. An advertising campaign was started and the first year's expenditure amounted to less than \$5,000 with an increase of \$40,000 in the total volume. The second year approximately \$11,000 was spent in advertising and the same plant's volume for the year ending December 31, 1922, amounted to \$238,000. This plant's selling expense on the \$125,000 annual volume was a little better than 31 per cent. The total selling expenses for the year 1922 was a little less than 21 per cent, and mind you, this total selling expense of less than 21 per cent included an advertising expenditure of about \$11,000, whereas, the 31 per cent selling expense on the \$125,000 included an annual advertising expenditure of less than \$500.

So much for advertising in a general way.

Specifically—an advertisement may be beautiful, but as empty as a drum. Well written—but as barren as the Sahara; handsomely arranged typographically, but dreary as a dirge. It may conform fully to accepted standards, yet fail utterly because it lacks that vital electric selling spark that fuses interest into selling.

The very surface superiority of an advertisement may defeat its purpose—just as some personal salesmanship is so palpably smooth that it glances off.

Haven't you seen nice, light, placid advertisements that have been petted and polished and gingerbreaded outwardly until they fairly breathed perfection plus? And haven't you longed to jab a blue pencil into their vitals to inject some living snap and salesmanship? Haven't you longed to muss them up a little and make them real?

Made of Olive Drab Waterproof and Mildewproof Duck, which will outlast five ordinary Tub Covers, without this special treatment.

One Customer says, "We have found from past experience that your cover fits better than any other we have purchased in the past."

Prices quoted on application.

Must Be Real.

Advertising, to win its way, must be real. Selling plans must also be real. They must be simple, imbued with human sympathy and salesmanship. They must be more than theory. More than the application of "high flown ologies." However, I deem of still higher importance the discovery and development of a dominate idea that lifts that particular product apart from all others; gives it a place by itself in the public mind. A great big inspirational selling idea that carries instant influence, overcomes resistance and implants desire. An idea so charged with human appeal that it fairly writes itself into vivid advertising—translates itself into hundred-point salesmanship.

Such a plan, necessarily, involves quite a bit of analysis of the subject or product you wish to advertise. It means careful investigation (in co-operation with the advertiser) of every factor entering into the proposition to be advertised.

Following this comes the application of the idea to every branch of the business which either manufactures, produces or sells the article to be advertised. The development of this plan is the acid test that proves the practicability of the idea and its harmonious co-ordination with all the details and needs of the business—its distribution connections and its market demands. Yes, there is a great deal more to advertising than the ordinary person imagines. May I ask you to contrast what I have partially told you with the "hit-or-miss" efforts that are bound to accompany experimental copywriting, experimental conduction of an advertising campaign, as against cold facts which must necessarily be dealt with.

Like all high-powered agencies, advertising may be dangerous in the hands of the bad. Just as dynamite may be used to turn worthless swamps into harvest fields, or may be used to blow up innocent children, so it is with advertising.

But remember that the evil which advertising accomplishes is always subjective—never objective, for advertising cannot be misused to propagate evil, since advertising is its own safety-valve.

This is because, just as no worthless product can stand advertising for any length of time, so no falsehood can be permanently spread by advertising.

Advertising must be judged by its fruits. Many embark on an advertising campaign with only a goodly supply of faith, but in advertising, as in true religion, "Faith without works is dead." And so advertising without results is dead.

* * *

After Mr. Brooks' address, he suggested that he would be glad to answer any questions from the floor.

Mr. Brown: Would you have any objections to stating the best method of advertising ice cream?

Reply: The best method would be, not one, but three methods. Newspapers, posters and signs. You should not use just one method you might as well not advertise at all, as to hold your advertising to one particular line. My advice is to advertise co-operatively, equitably and profitably.

Mr. Brown: What do you think is the proper amount to spend for gallon.

Reply: Three and one-half cents per gallon, where the business is large enough.

Mr. Brown: What proposition do you think best in outlining your plan for advertising, for instance, how much should be used in newspaper, poster and signs?

Reply: If you have five newspapers widely read, use the three best ones so as to reach the greatest number of people. The percentage should be based largely on the best method of reaching the public. I would say

TIME *The GREATEST* OF ALL TESTS-- *Has Proved Its Value to You!*

The Grand Rapids
ICE CREAM CABINET OF QUALITY

WHEN you buy ice cream cabinets you want the absolute assurance that they will render many years of money-saving, trouble-free service. You want to be sure that your investment will be returned to you with good interest.

How can you be positive of those things, in advance? Only by choosing a product on which TIME has placed its seal of approval.

Year after year Grand Rapids Ice Cream Cabinets go on making staunch friends through the exceptional service they render. Year after year they lead in scientific design and integrity of construction. That is why they defy TIME.

Now that the season is fast approaching when you will need new cabinets, be sure to investigate this leader. Write for our catalog illustrating full line of models of all types, including the far-famed ZERO Brick Cabinets.

three-fifths in newspapers, one-fifth in tie-up, and one-fifth for emergency advertising.

Mr. Brown: What does the quality of advertising have to do with the sale of the product?

Reply: It has a great deal to do with it, but it must be backed up by quality. A few people will get together and advertise ice cream then back this up by individual advertising and quality. You can accomplish a great deal. All the advertising in the world will not do you much good, if you do not back it up with the quality of your product. Ice cream must be palatable, it must create a desire for more ice cream. Make your ice cream so good that your customer will come back for more.

Mr. Brown: What percentage of butter food do you think should be used?

Reply: It should be about eight per cent, but it is not so much a matter of butter food, but a matter of palatability.

Henry W. Sterne of The Sani Dairy Products Company of Chicago was next introduced, and spoke on the subject "Co-operative Advertising." Mr. Sterne said in part: "I advocate national advertising of ice cream, and the way to do this is to get busy yourself and not wait for the other fellow to do the advertising. You should endeavor, in your advertising, to show good reasons why the public should consume more ice cream. You should co-operate with the national association closely in this advertising, so that the effect will be nation wide. My idea is to work out a plan based on gallonage, and to deposit this money as a trust fund with several of the larger banks throughout the country, who would hold it subject to disbursement on order of a committee to be appointed for that purpose." Mr. Sterne's address was received with applause, and he was

thanked by President Costa for the time he had given for this subject.

Mr. Campbell suggested that Mr. Sterne and Mr. Brooks be invited to sit with us during further discussion throughout the day. This was put in the form of a motion, and seconded by Mr. Kent, and motion carried.

(Continued in next month's issue)

REVISED ASSOCIATION CATALOGUE.

The Association of Ice Cream Supply Men has issued a new edition of its catalogue of its members' ice cream supplies, equipment, machinery and services, revised to December 30, 1923.

This catalogue, which since 1920 has assumed the position of a characteristic publication of the industry, lists members of the association alphabetically with their address or addresses and their products and in another section cross indexes the various products and services produced, originated or sold by association members. There are 100 pages in the new catalogue, the physical makeup of which has been improved.

Ice cream manufacturers throughout the country have received a copy of the catalogue for a place in their reference files or on their desks.

NATIONAL ASSOCIATION RECORDS APPRECIATION OF SUPPLY ORGANIZATION.

The National Association of Ice Cream Manufacturers has officially transmitted to The Association of Ice Cream Supply Men a resolution asserting that its recent annual convention in Cleveland was "the most splendidly attended meeting" in the history of the organization, and that "much of the credit for so large an assembly is due to the efforts of The Association of Ice Cream Supply Men" and resolving:

"That the National Association of Ice Cream Manufacturers record its appreciation of the work done by The Association of Ice Cream Supply Men, and instruct the president and secretary to convey this thought to the officers and members of The Association of Ice Cream Supply Men, and that this resolution be made a part of the minutes of this meeting, that a permanent record of our appreciation may be kept."

The resolution is signed by V. F. Hovey, president of the National Association of Ice Cream Manufacturers and N. Loewenstein, its secretary.

STERNE URGES NATIONAL ADVERTISING OF ICE CREAM.

Henry W. Sterne, vice-president of the Sani-Dairy Products Corp., largely known in the ice cream industry, is devoting much effort toward stimulating interest in national advertising of ice cream. Mr. Sterne has spoken on this subject at different conventions this winter.

To facilitate the work of gathering funds for national advertising, which is expected to be begun as soon as the committee as appointed by the National Association of Ice Cream Manufacturers reports on their plan, he has sent out a number of letters to supply houses advertising in the industry and requested them to use the following slogan in all of their trade paper advertising:

BOOST FOR NATIONAL ADVERTISING OF ICE CREAM.

Mr. Sterne has asked all interested in the matter to communicate to him any questions they may wish to ask.

National Homogenizer

—the Machine with the Revolving Head

The National Homogenizer is manufactured and backed by a million dollar corporation, builders of precision machinery for fifty years. It is the only machine that bears a perpetual guarantee.

Better Results!

In the history of the Dairy Industry there is occasionally brought on the market a new or improved machine which outdistances competition. The National Homogenizer, as exhibited at the National Dairy Show and the Ice Cream Convention at Cleveland, is such a machine and was pronounced by those who saw it as a triumph of engineering.

Better results, with less danger of tie-up because of worn out parts, can be obtained—a more satisfactory emulsion, creamier ice cream, etc.—by using the National Homogenizer and there are many good reasons why.

Chief among these is the revolving head which adds rolling and grinding to pressure. This makes clogging impossible; prevents the formation of radial grooves; and, with the three

graduated steps, insures a more perfect reduction of globules.

We guarantee this machine to produce a more perfect emulsion under less pressure and with less power consumption, than any other machine now on the market! Get all the facts. We shall be glad to send you a catalog and full information.

Truck Operating Costs

By Prof. B. H. Petty.

(Continued from January issue)

The first method is correct for a truck making one trip per day with one load, but is entirely wrong in the case of a truck making many trips daily with varying loads. In the latter case, if ton-mile costs are desired, it will be necessary to keep accurate records of mileage and loads between each stop where the load is changed. However, in this type of trucking the cost per mile or cost per day is usually more satisfactory.

When a truck is running on a regular route making trip out to a certain point with a given load and back to the starting point with the same or a different load, the ton miles can be computed by multiplying the total mileage by the total load carried and dividing by twice the number of round trips. Suppose a truck travels from A to B, a distance of 10 miles, and returns with the following loads:

Table No. 6—Round Trip Loading Table.

Round Trip	Load Out	Load In
No. 1	5 tons	1 ton
No. 2	2 tons	3 tons
No. 3	4 tons	0 tons
No. 4	1 ton	5 tons
Totals—4 round trips..	12 tons	9 tons
The total mileage is 80 and the total load is 21 tons.		

Then by the formula as given the ton miles $\frac{80 \times 21}{2 \times 4} = 210$.

figured on the basis of the individual trips, the result is the same.

From the foregoing it can readily be seen that the basis of ton mile costs must be correct before dependable comparisons can be made.

Systems Used In Recording Operating Cost Data.

Many different systems of recording truck cost data are in use by different operators. Some are satisfactory but many of them are inadequate, leaving out different essential items of cost.

One of the best and most complete systems is the National Standard Truck Cost System put out by the Truck Owners' Conference of Chicago. This system is the result of careful study of a great many existing cost systems by a number of men interested in truck transportation. This standard system has been thoroughly tested and many thousands have been sold to truck manufacturers and operators since its origin in 1919. The use of a standard system of this type enables owners more readily to compare their truck costs and to derive the benefit of a wider knowledge of trucking costs.

Method of Figuring Cost For Operation of Trucks in Use By One Large Business Corporation Using A Large Fleet of Trucks.

Keep two accounts on your books for each machine: First, the truck account, to which debit the original cost of the truck and any equipment in the form of permanent improvement that may be purchased and any tires that are purchased at any time, also the annual cost of insurance, licenses, taxes, etc., and cost of any extensive repairs or repainting which amounts to more than \$75.00. Credit to this account each month charges for depreciation on chassis, tires, insurance, haul, etc. The balance of this account at any time shows the value of the machine.

Second, the maintenance account, to which charge monthly items for depreciation and all expenses such as renewals of parts, gasoline, oil, electric current and other operating expenses, with the exception of general overhaul as specified above. Each month charge the debit balance of this account to the department

MENTION "THE REVIEW"—IT IDENTIFIES YOU.

in whose service the delivery is made. This amount balances the maintenance account each month and shows the cost of operation for the month which should be figured out on the basis of miles run and percent of weight hauled. If the truck is in the service of more than one department, figure the proportion, in which the total operating cost will be divided, on the basis of the mileage run in the service of each department. For this purpose a record must be kept of the drivers' cards, (individual for each load), which show the weight hauled, the mileage run and the department chargeable for each load.

All items of expense must be charged to each individual truck as incurred by that truck.

A low cost per 100 pounds shows that the truck is being kept busy and used to capacity and vice versa.

A low cost per mile shows that the truck is economical to operate.

Figure depreciation as follows:

Gasoline:

Truck—Divide the value of chassis and body less value of tires by $4\frac{1}{2}$. Divide the resultant figure by 12 to give the monthly charge.

Solid Tires—Divide the value of original tires by 18, the result being the monthly charge. Treat any new tires in the same manner when bought.

Pneumatic Tires—Divide the value of the original tires by 6, the result being the monthly charge. Treat any new tires in the same manner when bought.

Overhaul, Repairing, etc.—Divide the total amount by 12, which gives the monthly charge.

Electrics:

Chassis—Divide the value of chassis and body less value of tires by 10. Divide the resultant figure by 12 for the monthly charge.

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order—"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chock full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

Baker Ice Machine Co.
Omaha, Neb.

Battery, Edison—The Edison Co. in replacing the first battery bought make an allowance of 50 per cent on the cost of the original battery when it is replaced with another Edison inside of five years. There is no such guarantee on the second or replacement battery. The total cost of the two sets, therefore, would be the original cost plus about 50 per cent and this whole amount will be written off over a period of eight years. Divide the cost plus 50 per cent by 8 for the annual amount and this by 12 for the monthly charge.

Battery, Lead—Divide 65 per cent of original cost of battery by 12, giving monthly charge.

(Charge replacements of plates to truck account and divide by 12 for monthly charge.)

Solid Tires—Divide the value of original tires by 24, the resultant figure being the monthly charge. Treat any new tires in the same manner when bought.

Insurance, etc.—Divide the total annual amount paid for insurance, taxes, or licenses, etc., by 12, which gives the monthly charge.

Overhaul, Repainting, etc.—Divide the total amount by 6, which gives the monthly charge.

Credit all the above monthly charges to the truck account and debit to the maintenance account monthly until the amount of the original purchase is written off, except the cost of the machine, which should not be written down below \$5.00.

Cost of current for electric trucks:

Where the actual amount and cost of current consumed in charging electric trucks is unknown, the trucks should be debited on the following basis:

700 lbs.....	\$120.00 per annum
1,000 lbs.....	140.00 per annum
2,000 lbs.....	170.00 per annum
3,000 lbs.....	240.00 per annum
4,000 lbs.....	300.00 per annum
7,000 lbs.....	360.00 per annum
10,000 lbs.....	400.00 per annum

Divide the above amount by 12 and show the item monthly on your uniform expense statement.

Interest Charges—Charge against each truck, so long as it is in the company's possession, interest at the rate of 5 per cent per annum, beginning with the original cost and every month thereafter on the value at which the machine stood in the books at the first of the month.

In conclusion I would like to emphasize again the point that in order to get accurate cost data every item of expense must be properly considered. Comparison should be on the same basis and for an absolute comparison of two trucks they should be operated side by side under the same service conditions. We must get away from the policy of unfair comparison simply for the advantage of one particular type of truck. Surely we all realize that there are particular fields in which the electric truck excels just as there are fields in which the gasoline truck is supreme. There are also particular types of service in which the horse cannot yet be economically replaced by either gas or electric trucks. A spirit of co-operation in the publication of accurate cost data covering the entire field of truck transportation, with a full description of conditions involved, would be of inestimable value not only to the truck user, but to the maker and seller as well. The difference between success and failure in certain types of business frequently hinges on delivery costs. Permit me to suggest that it would be greatly to your advantage if this association would appoint a permanent committee for the purpose of collecting, analyzing and distributing to your membership dependable records of truck operating costs for all types of trucks engaged in the ice cream business.

Retailers Praise The Nizer

To the Ice Cream Manufacturer, Nizer Records Prove
That the Ice and Salt Cabinets Must Go

ONE of the vital elements in successful distribution of Ice Cream is the enthusiastic co-operation of the retailer.

Whatever the manufacturer can do to help the retailer sell more and profit more should be done. Especially when, as in the case of the Nizer, the manufacturer can help himself at the same time by furnishing the equipment.

Nizer advantages to the retailer are, in brief —

Elimination of sloppy floors.

Saving an average of two quarts per five-gallon can, formerly lost by shrinkage.

No more salty ice cream.

Ability to serve the last half-pint as readily as the first.

More satisfied customers, because of perfect texture and flavor.

Absolutely automatic operation.

Lowest known current consumption.

That the Nizer Automatic Electric Ice Cream Cabinet does accomplish these things, is amply proven by reports from over 150 cities, covering periods up to three years. These reports cannot be equalled or even approached by any other mechanical cabinet.

That the Nizer stands alone in its field, a successful pioneer, is emphasized by the basic United States patents which have been issued to this company.

Over 400 cabinets in actual service in Detroit and the invaluable data of our engineers are open to your inspection. It will pay you to visit here.

Here's What They Say

I am so satisfied with my iceless refrigeration plant for ice cream that I want another installed in my other store as soon as possible. The maintenance is very little. Soda fountain is a lot cleaner and easier kept clean and ice cream is always right and uniform.

H. S. Carpenter, Pharmacist

We have been using the Iceless Refrigeration for several months and find it perfectly satisfactory. It is especially valuable in keeping ice cream at the same temperature, which means a great saving to us. It does away with all the trouble of ice and salt and makes the work at the fountain much easier. We would never care to go back to the old system.

Tennant & Gannett, Druggists

We wish to express our entire satisfaction with the Refrigerator Cabinet installed by your firm several months ago. It saves the shrinkage of ice cream and eliminates the dirt and water which prevailed under the old system. We cannot say too much in praise of this Cabinet as it keeps ice cream in perfect condition all the time.

Forman-Evans Drug Co.

I am more than pleased with my Nizer Iceless Refrigerator. It has eliminated all the necessary mess that all of us had to put up with once a day under the old system, besides keeping cream in perfect condition at all times which eliminates all shrinkage, a matter one should not overlook.

McGraw Pharmacy

Several months ago you installed in our kitchen a Nizer Iceless Machine to contain our ice cream and ices. After its having been in operation for this period of time, I wish to compliment you upon the success. It has effected a saving in ice cream, due to the even temperature maintained, and has worked an economy in that our ice cream can now be kept close at hand, even in a hot room.

Hotel Wolverine

FOOD TECHNOLOGY

Scientific Information on Food Subjects With Practical Application

Adviser, Dr. W. W. Skinner, Bureau of Chemistry, U. S. Dept. of Agriculture.

The Carbon Dioxide Treatment of Foods

By SAMUEL C. PRESCOTT

Massachusetts Institute of Technology.

THE development of modern methods of treating certain types of food substances with carbon dioxide as a means of preserving their natural flavors, or of preventing decomposition processes, is well worth careful consideration. This is especially true in view of some of our newly acquired knowledge regarding the vitamins and their instability or destruction when exposed continuously or even for short periods to the action of air or oxygen. In fact, it seems to the writer that a thorough investigation of the occurrence of uncombined carbon dioxide in natural foods such as fruits, roots, tubers and cereals, might throw much light on the part actually played by this gas in the economy of nature.

It has been rather the custom among those concerned with foods to regard carbon dioxide merely as a decomposition product, and as such, indicative of undesirable changes in food substances. This opinion can hardly be warranted if we study carefully the role of carbon dioxide in nature, and assemble the facts that have been established one by one during the many years that the gas has been observed. The biochemist has shown conclusively that this compound, instead of being merely a waste product of living things, is in reality also a building material of the utmost importance, and absolutely essential for the construction of all food substances. It is significant that the green plants, which are the real food-builders, not only give off carbon dioxide as a respiration product or product of metabolism, but also because of their ability to absorb light energy, utilize vast quantities of this substance through the process of photosynthesis, in building up the world's food

supply. One of the most recent texts in general biology, by Professors Burlingame, Heath, Martin and Pierce of Stanford University, states that "sugar is the fundamental product of photosynthesis, and because of this fact photosynthesis is "the most important chemical reaction in nature, for all food is built up from sugar." As the essential carbon-containing raw material of sugar manufacture, therefore, and fuel manufacture as well, carbon dioxide must be looked upon as our most fundamental food substance, although not usable for constructive purposes until further combined.

As a Protective Agent

The role of carbon dioxide as a protective agent is probably less generally given attention, but it is on this action that the modern processes rest. It was pointed out by Dr. Kolbe of Leipzig nearly forty years ago that meat which was stored in airtight compartments filled with carbonic acid gas "retained its healthy appearance and agreeable taste for a period of six weeks." This observation was made before the bacteria as agencies of spoilage and putrefaction were generally known, and certainly before the different types of bacteria capable of producing destructive kinds of chemical change had been discovered and described. Our own famous Dr. R. O. Doremus of Bellevue Hospital Medical School stated in a letter to the American Carbonate Co., under date of April 27, 1887, "it (carbon dioxide) will aid in preserving not only potable liquids, but also berries, fruits and meats."

The action of carbon dioxide as it is produced in the fermentation has long been known to be beneficial from the standpoint of the stability

of the product and also as an agency for maintaining the agreeable taste and flavor of the beverage.

In the manufacture of soft drinks, such as gingerales, near-beers, bottled "sodas," etc., the carbon dioxide assists materially in preventing fermentations due to molds or bacteria, as well as in imparting the characteristic quality by which flavors are accentuated and a refreshing effect produced. Fermented milks containing carbon dioxide maintain a more uniform acidity, due apparently to a regulation of the activity of the lactic acid bacteria whose function it is to produce the characteristic buttermilk flavor.

Studies on natural and carbonated waters explain in part at least why these results are obtained. Many spring waters in the fresh condition contain numerous bacteria of several different types all more or less characteristic of the natural surroundings and in no way indicative of pollution. The same waters bottled in the "still" condition often continue to show bacteria in numbers somewhat increased due to the processes of growth and reproduction, the organisms dying out only after a long period. The same waters bottled and charged with carbon dioxide show only occasional or very few bacteria, and are often free from living germs. In other words, the carbon dioxide has introduced a condition unfavorable to the continued life and action of these particular kinds of bacteria, but not all bacteria are equally affected. Those types requiring a high oxygen or air content tend to be inhibited or choked out, while those capable of adjusting themselves to a variety of conditions are not only not seriously impeded by lack of oxygen, but on the other hand, rather favored by this condi-

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

tion, are likely to remain alive and may even grow in the presence of carbon dioxide, providing the acidity is not too high.

Since the types of bacteria naturally occurring on leaves, fruits and vegetables, and on the surfaces of meats exposed to the air and to contact with ordinary surfaces are largely of the air-loving types, it is easy to understand how carbon dioxide in sufficient concentration may check bacterial development and hinder the type of spoilage (natural decay) due to these germs. With protein foods infected with the semi-anaerobic or anaerobic putrefactive bacteria, another explanation must be sought, and here the increased acidity due to carbonic acid may be responsible for the prevention of spoilage, as the organisms involved generally work best in media low in acidity, neutral, or even slightly alkaline in reaction. It would seem to the writer, however, that too much should not be expected along this line, and that carbon dioxide should not be regarded as a perfect disinfectant for foods until much more extended study of its capabilities has been made.

A Food Preservative

Whether the above hypotheses are or are not adequate to explain the action of carbon dioxide, and despite the suggestion of limited potentiality, there is a not inconsiderable mass of evidence pointing to the efficiency of the gas as a food preservative and improver. This has been especially demonstrated in dairy products, such as butter, ice cream and milk powders, but is also noted in bread, foods containing unsaturated fats or oils, and with fresh fruits. Most important of all, from the nutritional standpoint is the irrefutable evidence produced by Zilva, McClendon, Hopkins and others that carbon dioxide preserves the indispensable vitamins, the fat-soluble vitamin A and the antiscorbutic vitamin C which are destroyed by oxidation, and especially by the application of heat in contact with air. Any process which tends to retain and protect these elusive but essential components of food so that they may be utilized for growth and health-promotion by the ultimate consumer of the food is well worthy of serious and continuous study. Incidentally many interesting side questions are brought up. Van Slyke has shown that freshly drawn milk contains about 10% of CO₂ by volume, but that this amount lessens on exposure to air. It might be of importance to

determine if the "germicidal property" of fresh milk is related to its CO₂ content rather than to specific substances producing either destruction or agglutination as has been suggested.

There is every reason to believe and certain investigations support the conception that some at least of the CO₂ produced during the respiratory changes in sweet fruits which are extraordinarily active during the ripening process, remains dissolved in their juices, and it would be difficult to conceive of such a combination of CO₂ with such juices as would fail to participate in the prevention of the decay of such fruits. This is especially true in view of the utilization of CO₂ in numerous practical processes designed for the preservation of bottled or prepared fruit juices. Of course, it is well known that the skin also acts as a mechanical barrier against the entrance of invading fungi or bacteria.

The Heath Method

According to a popular article in the Literary Digest in November, 1922, a considerable portion of the grape crop of California in that year was saved from decay by the use of carbon dioxide to replace air as an atmosphere in which the fruit was maintained. The application of this process to many other kinds of fruits, as well as to a variety of foods aside from fruits, has been made in the so-called "Heathization" of food-stuffs and in the packing of coffee, nuts, chocolate and many other substances in inert gases, to prevent the oxidation of fats and consequent rancidity.

Perhaps the most spectacular as well as the most valuable and widespread use of this method of food preservation is in the so-called Heathization of butter and ice cream—a process which as it is now being applied, is doing much to raise the standards of commercial quality of these foods. No food substance responds in its fine shadings of flavor more quickly than does butter to changes in environment, to odors, or contacts, or dust or to the action of air itself. In fact, the air which is worked into butter has for several years been recognized by experts in dairy products as one of the chief deteriorating influences from the standpoint of fine flavor, for it was found by direct investigation that the "off flavors" of butter were due in large part to the oxidations caused by this imprisoned air or to minor fermentative changes caused by the bacteria on dust particles introduced

during churning in an air atmosphere. The use of vacuum churns was impractical, and the next step, worked out logically and with scientific precision by Mr. Heath was the process to which his name is given. With the new knowledge of the relative effect of air and of carbon dioxide on vitamins occurring in butter fats, the soundness of the principles which he has established cannot be gainsaid, and it surely seems as if this process should become universal.

Applies Also to Ice Cream.

In the manufacture of ice cream the same principal holds good, although here of course the low temperature maintained in hardening rooms and in storage prevents the oxidative or bacterial changes from becoming so apparent or so intense. The principles involved—the use of a pure inert gas in place of a possibly dirty air, the reduction of oxidations of fats and the preservation of vitamins—are, however, the same. Comparative studies in my own laboratory, using a large group of students and others as test individuals for the purpose of detecting differences in flavor and appetizing quality have been made with interesting results. Ice creams of identical composition as to the "mix," but frozen in air and in carbon dioxide, respectively, were used in these studies, and it was repeatedly found that the cream frozen in the atmosphere of carbon dioxide was regarded as superior in texture and flavor. The fact that carbon dioxide tends to accentuate flavors was demonstrated. No manufacturer who desires to sell a poor product or to mask an "off-flavored" butter or ice cream can derive satisfaction by use of carbon dioxide. A good product is made better, but a poor one is made less satisfactory in flavor by its use. The tendency will therefore be, as this process extends in use, to raise the standard of quality of these foods. Those who cannot compete will have to withdraw or be satisfied with producing a distinctly inferior product at a lower price.

No further descriptions of the manifold applications of this method need be made here, as the purpose of this article is to call attention to the desirability of extending the researches already begun in this field from the standpoint of food preservation, and also to stimulate the investigation as to the physiological action of carbon dioxide in the special senses of smell and taste.

Everything for the Dairy Industry

Danforth Jet Sterilizer and Rinser

Showing the simplicity of operation by means of foot tread.

THE Danforth is a product of our own manufacture, built to meet the needs of the small country receiving stations or creameries not equipped with large pressure washers. It is used in the larger milk plants as an auxiliary, and also in ice cream factories for the rinsing and sterilizing of ice cream cans.

It is sturdily built and very compact, requiring only about one square foot of floor space. The valves are operated by a single flexible tread. By slightly shifting the ball of the foot, either or both valves may be opened, driving into every corner of the can a forcible spray of cold water, hot water or steam. The foot operation leaves both the operator's hands free to handle the can.

The valves can be re-ground. They are so designed that the flow of water or steam tends to keep the seat free from grit, eliminating scoring.

Write for complete description and prices.

Phantom view showing how the spray of water or steam reaches every corner of the can.

Burrell-Simplex Can Drier

A SIMPLE and comparatively inexpensive can drier that can be used in connection with can washers already installed; or in combination with the Burrell-Simplex Rinser and Steamer, as illustrated. A compact unit of neat design and sturdy construction.

It draws the air through the coil and forces the hot air at high velocity directly into the can, an improved principle that causes higher efficiency and prevents leakage of hot air. Will dry the cans and the covers as rapidly as one man can handle them.

The drier can be furnished for belt, motor or turbine drive (turbine drive illustrated). Prices and full information on request.

Oklahoma Association of Ice Cream Manufacturers

Proceedings of Seventh Annual Convention

(Continued from January issue)

Milk Inspection

By EARLY CASS*

I HAVE often wondered what the milk dealers and ice cream manufacturers think of the milk inspection departments. Very often it is a question in my mind as to whether or not you really understand the work we are doing and why we are doing it. I am reminded of the story of the negroe mammy who had attended one of these revival meetings. The crack evangelist had been in town two or three weeks, and had obtained about 50 or 60 converts. One Sunday they were to baptize all of them. The evangelist picked out a little pond near the edge of town for this purpose, and in order to take care of the crowd more expeditiously, he stood some distance out in the water, and had the "baptizees" come out to him in a line, one behind another and return to shore after he had given each one a ducking in the water. His method was to hold his hand over the nose of the person being baptized, push his or her head down into the water, leave it there a few seconds, and when he or she came up again, ask the question, "Do you believe?" to which he was to receive the answer, "Yes." When Eliza's turn came, he did

the same with her, but Eliza didn't close her mouth, and got a mouth full of water. The parson asked her his question while she was coughing up the water, and she didn't answer him, so he ducked her again. Eliza failed to close her mouth again, and got another mouth full of water, with the result that the parson did not get the answer he wanted. The third time he yelled at her, and the crowd on shore yelled at her to answer. Finally Eliza could speak and she said, "Yessah, ah believes in the Lawd, and ah also believes this dawn fool preacher is trying to drown me."

So I am a good deal like Eliza. I think the average milk dealer or ice cream manufacturer just accepts the milk inspectors' visits to his plant because the law requires it, but wonders what we inspectors are doing it for.

Why do we inspect milk and ice cream plants? True, dairies were not inspected years ago, but that was before the world was so far advanced as it is now, and before congestion made it prohibitive for people in the cities to keep their own cows, produce their own milk, and a little for their neighbors, and use it right away. As cities became more congested, city cows had to be disposed of, and the farmer had to bring the milk to town.

As the business for supplying milk for city consumption grew, farmers began to depend upon the demand for milk as their chief source of income, and some of them being not just as ethical as they might be, they began to deliver adulterated milk. Something had to be done to put a stop to this practice, and in Massachusetts in 1856 the first law was passed making it prohibitive to water the milk. Between 1856 and 1877 the cities of Washington, Philadelphia and Syracuse passed similar ordinances. Progress along this line, you see was slow at first, only four cities having taken any action against this practice in over twenty years.

In 1881 Dr. Hart of London discovered that epidemics of typhoid, scarlet fever and diphtheria were directly traceable to the milk supply, and about the same time other scientists made important discoveries with reference to germs causing disease, and they learned how to more accurately trace the source of disease germs. Other epidemics were traced to the milk supplies, and it became necessary in many of the congested centers to establish milk inspection systems in the health departments to prevent further spread of disease through this source.

The city of Washington in 1881 passed a law giving representatives of the health department authority to take samples of milk at the milk plants for testing purposes. In 1902 New York City passed a similar ordinance, and since then other cities have done the same until at the present time every city of importance has provided by law for the proper inspection of the milk supply. Before these ordinances giving the health inspectors right to enter the milk plants and take samples the samples of milk were purchased at the different

Economy Cabinets

Dry Package Cabinets

Most efficient dispenser of Brick carton, dry bulk package, or Eskimo Pies. Each package goes to the customer in perfect condition having had superior refrigeration in a container totally surrounded by ice, in a cabinet heavily insulated with cork.

New Corkboard Cabinet

The manufacturers have come to realize that superior insulation means money saved on ice consumption. This tapered cabinet has an average of 3" corkboard on the side and 4" on the bottom, lined on both sides by water-proofing paper. Equipped with 7/8" buffer board to protect bottom of cabinet, making a cabinet that is far superior to ordinary styles.

Tub Cabinets

This separate compartment cabinet is especially designed for rural trade, as one compartment alone can be used without being compelled to ice the entire cabinet. The tubs of the cabinets are especially treated to prevent leakage.

ALL Cabinets finished in highly polished mahogany.

stores or restaurants, and it was difficult to say whether or not the milk dealer was to blame.

In 1891 Dr. Hart concluded that milk should not be fed to infants unless it is boiled, which resulted in the adoption of pasteurization as a means of safeguarding the milk supply.

The Department of Health of Tulsa is placed in a rather peculiar position. We have supplying Tulsa about 160 dealers in raw milk and nine dealers in pasteurized milk. We would like to enforce a pasteurization law in Tulsa, but there are a number of factors, including political ones, that prohibit our taking any such step at the present time. We will come to it eventually, and I hope very soon. I believe the best way for us to bring about pasteurization of 100 per cent of the milk sold in Tulsa, without further disturbing the political situation, is to continue our educational work and wait, meanwhile continuing a most thorough inspection of all of the milk supply.

With regard to the inspection of ice cream factories, I would like to have you feel that our inspectors are not trying to put anything over on you. You will derive the most good from our inspections, and we will profit more by the experience, if you will speak up, explain the circumstances and give us an opportunity to match our differences. We want to co-operate with you in every possible way. We want to see you make some money, although we do not meddle with prices. We want to help you to make a better product, one that is both wholesome and healthful, and having attained both of these qualities, the matter of price can easily be adjusted to your own satisfaction. I thank you.

President Parker: Any questions? If there is no other business, we will now adjourn, and meet again in this room at 2:00 P. M. Meeting adjourned.

Thursday, Nov. 22, 2:00 P. M.

Mr. Porter: I firmly believe the ice cream industry is becoming one of the most important food industries of this country. As such, it is our duty not only to sell the dealer on our idea, but to go out and sell the public. We have data to prove that ice cream is a good healthful food, and that it should be eaten by people of all ages, and we would be doing the public a great service if we would induce our people to eat more ice cream. I think the best way to this is to appeal to the imagination.

We might say in our advertising that our ice cream is pasteurized, that it is made in a modern plant, and under the most scientific methods of manufacture, we might add that our ingredients are as good and as pure as money will buy, but if we don't appeal to the imagination, and create a desire for our goods through advertising, we are not going to reach the maximum gallonage. We've got to appeal to the senses. We must tell the people how delicious our ice cream is. We must describe the goodness of our product in such language that the person reading will want a dish of ice cream right away, and in our poster advertising we must illustrate the most natural and tempting dishes that will carry the most effective appeal through the eye.

Then, if we give the public a high quality ice cream and make our ice cream as delicious as our advertising says it is, we may expect further big increases in consumption.

* * *

I want to call your attention to our three regular short courses. January 3 to February 16, we will have the regular six-weeks dairy course. February 18 to 23, the one-week ice cream makers' course will be given and February 25 to March 1, the one-week creamery-men's course. You will note the last mentioned course follows the ice cream making course immediately giving those attending the ice cream course an opportunity to attend the creamery course also if they desire to do so.

I want to say further that we are very much disappointed with the support given the ice cream course by the ice cream factories of the state.

Most of our registrants are from other states, and we do not propose to continue the course unless more support is given it by our Oklahoma ice cream manufacturers. By this I do not mean to say that we do not want out of the state people to take it. We are glad to have them come, but we should have more students from Oklahoma. I believe the trouble lies in the manufacturer. The average young fellow will not spend his own time and money to attend the course. It is up to you manufacturers to pick out a few good boys who you want to employ, or your present employees, and send them, paying their expenses while attending. The information they get would be well worth the price you would have to pay.

You should also lend your support in the ice cream scoring contest. Last time we had three samples. In Kansas they had seventy. Don't be afraid to send in a sample, or neglect to be there to score it yourself. There is always an opportunity to learn something comparing the ice cream of thirty or forty factories.

In closing I want to thank you gentlemen for the support you have given us the past year at the college, and would be glad to answer if I can any questions or correspondence.

IF YOU KEEP UP WITH OUR ADVERTISERS, YOU KEEP UP WITH PROGRESS.

Mr. Hawk: First I want to thank the ice cream manufacturers for the courtesies they have shown us, and assure them that the Wolf Hounds appreciate it.

There will be a dinner and entertainment given to-night in the dining room below by the Wolf Hounds, and I want to invite all of you to attend. Hon. Campbell Russell is going to talk to us. I might say that there is no man in Oklahoma more fitted to give us a story about the history of Oklahoma, and to tell of her recent troubles than Campbell Russell. Mr. Russell

has been a citizen of Oklahoma more than 40 years, and a great deal of his time has been devoted to the development of the state. Incidentally, he has done a great deal for the dairy and live stock industry, having brought more than 14,000 cattle into Oklahoma from other sections of the country. The address of Hon. Campbell Russell will be a treat for you, and I hope all of you will be there.

C. O. Lund of Chicago will now talk to us about Eskimo Pies. Mr. Lund.

Eskimo Pies

By C. O. LUND

IN TALKING to you today, I assume that all of the Wolf Hounds are boosters of Eskimo Pie, and I will ask the Wolf Hounds and the ice cream manufacturers to forget that I am a representative of the Eskimo Pie Corporation and instead of talking about Eskimo Pies, we will talk about chocolate coated ice cream bars.

For the past eighteen months I have visited every large ice cream manufacturer east of the Mississippi River. I had the opportunity and pleasure of meeting the largest representative ice cream manufacturers of the country, and I have seen the methods they employ in the manufacture of ice cream and chocolate coated ice cream bars.

When I came to Oklahoma and found that the price of ice cream is from \$.90 to \$1.00 a gallon, I was dumb-

* With the Eskimo Pie Corporation, Chicago.

founded, for this price is entirely out of proportion with prices and conditions as I have found them in other parts of the country. So far as I have been able to determine whether it is the inability of the Oklahoma ice cream manufacturers to get a better price, or if they are so much more efficient ice cream makers that they can afford to sell it for that price. I do not know of any place in the east where ice cream is sold for the price it is sold for in this state. In the state of Michigan we find some of the finest ice cream plants in the country, and ice cream is not sold there for a dollar a gallon. They are not getting less than a dollar a gallon, and their butterfat standard is ten per cent. I firmly believe that ice cream manufacturers who have been selling their cream for a dollar a gallon would sell more ice cream, and they would make more money, if they would add about twenty cents to their price. Put ten cents of this into better quality, five cents of it into more advertising, and five cents extra profit, and your sales will be very satisfactory, and you will have a bigger net profit at the end of the year. In Pennsylvania, in the cities of Wilkes-Barre, Scranton, Allentown, and Reading, the per capita consumption is twice as great as it is here, and they are getting \$1.75 for brick and \$1.40 for bulk cream, and still they are complaining of the poor price they are getting.

In connection with the making of the chocolate coated ice cream bar, there are two questions in which the average ice cream manufacturer is chiefly interested:

1. How can I make and sell it profitably?
2. How can I build gallonage?

The first thing to do is to figure what the product is going to cost. Many figure on the dozen basis. They figure costs and profits, and they sell on the dozen basis. A middle eastern manufacturer inaugurated a system that is being taken up by others. He wanted to build up his winter gallonage, and he found that it would be necessary for him to install extra equipment for cutting, coating, wrapping, etc. It would cost him 85 cents a gallon to convert his ice cream into chocolate coated ice cream bars. He is getting \$3.00 a gallon for ice cream sold in the form of chocolate coated ice cream bars, and making money after allowing the 85 cents for conversion to bars.

One of the most important factors in the making of chocolate coated ice cream bars is the coating. The leading chocolate manufacturers have become interested, and have perfected a coating that is ideal for this purpose, selling at 27 to 28 cents a pound. This product has a cocoa butter content of about 42 per cent, and will coat from 36 to 48 bars to the pound of chocolate. It provides a very thin coat, which is more desirable, and less expensive.

More Bars to the Carton.

A further economy is effected by putting more bars in a carton. The old method was a dozen to the carton. Under the new method, they sell them by the carton instead of by the dozen, a dollar for a carton of 27 bars. The dealer's profit is small, and when he thinks of buying a dozen, he sees only a very small profit for the sale of that dozen bars. Now he buys a carton for a dollar, sells it for \$1.35, and there is a greater inducement for him to buy. Through the use of the 27 bar carton, the sales are increased, and the cost of cartons to the manufacturer is cut a little more than half.

I have actual records from 14 manufacturers showing that it costs them from 90 cents to a dollar to convert their cream into bars, and they are getting \$3.00 a gallon for cream so converted. In Oklahoma at present prices you could sell this cream for \$2.00 a gallon and make money.

To sell any product we must let the public know where to buy it. In a large eastern city last season the largest ice cream manufacturer averaged 3,500 dozen chocolate coated ice cream bars a day for 110 consecutive days. Another manufacturer was selling about a thousand dozen a day, average for the same period of time. This year the largest manufacturer has been selling only 900 to 1,000 dozen a day, and the smaller manufacturer actually 1,226 dozen a day. They had the same proportionate gallonage as last year; they were selling at the same price; they were selling the bars under the same name; they were using the same advertising. All conditions appeared to be identical, yet the larger manufacturer was not getting the increase he should have gotten, in comparison with the smaller manufacturer. Something seemed to be wrong, and an investigation was conducted.

We found the small manufacturer was using a high grade coating. The large manufacturer was using another coating that didn't sell any ice cream. One would take a bite of the bar and feel like spitting it out and throwing the rest of the bar away.

There was a similar instance in another eastern city. I was called in to investigate. The manufacturers placed the bar on the market at the same time. The quality was the same. The largest manufacturer bought the coating by the car load, and supplied all the other manufacturers so the coating was the same. They advertised co-operatively, so the advertising was the same. Two cents a dozen had been set aside for advertising. I went to the dealers to find out what was wrong, why the small manufacturer should be selling 40 per cent more chocolate coated ice cream bars than the large manufacturer with two and one-half times greater gallonage. I found the large manufacturer's dealers had no advertising. The drivers had chucked the advertising material under the seats of the trucks and no one knew where to buy the large manufacturer's ice cream bars. This is just an illustration to show that we cannot expect to sell a product unless the people know where to get it.

I have here some charts which give a few figures regarding the chocolate coated ice cream bar industry. These figures apply to the bars sold under our own trade name. Last year there were sold approximately 70,000,000 chocolate coated ice cream bars. This year there will be approximately 160,000,000 million sold, basing our estimate on the number sold during the first eight months of the year. For next year we have set a quota of 360,000,000 million bars, which would be equal to four and one-half million gallons of ice cream. I am glad to say that the New England states are surpassing their quota, on the present rate per month.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

These figures I have given no doubt seem new to you, but the chocolate coated ice cream bar business has progressed the most in the eastern states. Eighty-two per cent of the chocolate coated bars are sold east of the city of Cleveland.

The quota that has been set for the chocolate coated ice cream bar industry for next year is not large when we consider that there were more than one billion, four hundred million pieces of chewing gum sold last year,

VOLUME Past, Present and Future Possibilities of Chocolate Coated Bar				
		Dozen	Cost	Equivalent in Ice Cream
Eskimo Pie Season 22-23	Eskimo Pie Sales, Season 22-23	70,000,000	4/10	815,000 Gal.
Eskimo Pie Present Rate of Sale	Present Rate of Eskimo Pie Sales	160,000,000	1	2,000,000 Gal.
Eskimo Pie Quota For 23-24	Quota Set for 1923-24	360,000,000	2 1/2	4,000,000 Gal.
Gum	Gum Sales 1922	1,040,000,000	6 1/2	13,000,000 Gal.
Bottled Pop & Ginger Ale	Bottled Pop & Ginger Ale, Not including Soda Water, Pop & Ginger Ale, etc.	4,000,000,000	25	50,000,000 Gal.

and people do not need teeth to eat ice cream either. It is eaten before we get our teeth and after we lose them. We have every reason to believe that the chocolate coated ice cream bar industry should equal that of the gum and soft drink manufacturers. America consumes four billion bottles of pop in three months of the year. The pop and gum manufacturers have built up this big demand by advertising their products. They don't knock each other, and they don't knock ice cream. We don't need to try to cut the sales of soft drinks or gum, but simply talk and advertise to induce people to eat more ice cream and chocolate coated ice cream bars.

Co-operative Advertising Going Over In East.

Several eastern cities have adopted the co-operative

Costs in Selling Ice Cream VIA The Chocolate Coated Bar			
ITEMS		Per Dozen	Per Gallon
COATING	COSTING 25¢ PER POUND DIPPING 40 BARS PER LB.	.075	.50
LABOR	Made by Machine	.02	.133

Net Price Secured for Cream		2.06	

advertising plan, and are putting it over on a big scale. In one particular city six manufacturers have joined, and the cost is pro-rated among them according to gallonage. They put on a big advertising campaign for the chocolate coated ice cream bar, raised the price to ten cents and sold 15,049 dozen ten cent bars in ten days.

I can give you another illustration of what can be done when ice cream manufacturers begin fighting among themselves. In an eastern city an ice cream war was on. Each one began eating a hole in the business

AMONG THE BRIGHTEST THINGS IN THE REVIEW ARE THE ADS—READ THEM.

of the other. One of them spent \$15,000 and the other spent \$10,000, and at the end of two weeks, one man had three stops more than he had when the fight started, and the other had the same number of stops he had at first. Both lost heavily. If they had gone together and spent less money, both would have sold more ice cream. Both lost heavily. If they had gone together and spent less money, both would have sold more ice cream.

In another big city manufacturers cut the price during their ice cream war to 92 cents a gallon and lost between \$2,250,000 and \$2,500,000.

The best endorsement of the chocolate coated ice cream bar that I can give is to say that of thirty directors of the National Association of Ice Cream Manufacturers, twenty-nine of them are making them, and I am glad to state further that 82 per cent of those making the bars are making Eskimo Pies.

If there are any questions I shall be glad to answer them. I thank you.

W. M. Hawk: How many manufacturers are making a ten cent bar?

Mr. Lund: Only one. We started November 3rd, and continued. This was just a campaign to see what could be done with selling a ten cent bar with a heavy advertising campaign. It illustrates the dynamic power of advertising. In this campaign they spent about 40 cents a dozen for advertising. They made a good sized bar, and the people were pleased. After the ten day campaign the price was reduced to five cents, and the public was pleased again.

Mr. Hawk: How many bars did you cut to the quart of cream?

Mr. Lund: For the ten cent bar we cut 14 to the quart, and for the five cent bar, 20. I wouldn't advise

anyone planning to begin making chocolate coated ice cream bars to try to sell them for a dime.

Member: How many did they sell before the demand began to wane?

Mr. Lund: The demand had already begun to drop at the end of ten days, but picked up again when the price was reduced to five cents.

Mr. Porter: I want to explain to Mr. Lund that our price of a dollar a gallon in Oklahoma is equal to about \$1.25 in other states, for we do not give any reicing service. This accounts for the difference in price in this state and other states, but at that, we probably ought to have more for our ice cream.

Mr. Lund: You are indeed fortunate in having disposed of the icing problem that way. It shows that you are working together. In some places they are not only icing free of charge, but they put linoleum on the floors, paint store fronts, and even loan money. One large city manufacturer I know of has \$80,000 loaned out to dealers. Gentlemen, I thank you.

* * *

NATIONAL EXPOSITION REPORT.

At the close of Mr. Lund's address, Thomas J. Stewart, former president of The Association of Ice Cream Supply Men's Salesmen's Club, was called on to give his report of the exhibition in Cleveland in October. Mr. Stewart stated the 1923 exhibition was the most successful ever held. There was an attendance of 4,100 this year compared to 2,600 last year. In 1922 the exhibits occupied 34,000 square feet of floor space. This year the exhibits occupied 62,000 square feet, 165 exhibitors being represented.

Mr. Stewart stated it had not been decided as to whether or not The Association of Ice Cream Supply Men would hold their 1924 exhibition in New Orleans in connection with the ice cream manufacturer's convention or not. New Orleans has no hall large enough to house all the exhibits of the supply men's association. A promise had been made by one of the southern manufacturers, Mr. Geisel, to have a building ready for them.

In order to swell the attendance of Oklahoma ice cream manufacturers at the national, Mr. Stewart suggested that they have an Oklahoma Day, to encourage the Oklahoma manufacturers to turn out in greater numbers. He said that Texas and Georgia were especially strong in attendance at the national convention.

Mr. Hawk then read a number of telegrams from prominent Wolf Hounds who were unable to attend, and made other announcements.

Mr. Stern stated that the national association had appointed a committee to work on the co-operative advertising matter, and they expected to have something definite started within a year or fourteen months. The money will be raised on the pro-rata basis, and some will want to get in on it, and others stay out and look in. He urged the traveling men to help the cause along as much as possible, and asked the ice cream manufacturers to remember that when a traveling man begins to talk national or co-operative advertising to him, he is not doing it merely to have something to say or to try to sell his goods, but he has the ice cream manufacturer's interest in mind, and that it will mean more sales of ice cream.

An invitation was extended to everyone by Charles Smith, vice-president of the Texas Long Horns, to attend the convention of the Texas Ice Cream Manufacturers Association in Galveston on November 26 to 28.

Upon motion, the meeting was adjourned.

COURAGE

SCOFFED at, derided, meeting obstacles at every turn, Christopher Columbus never wavered in his conviction that he could conquer every difficulty and discover for Spain a new empire far across vast, uncharted western seas.

What courage, what indomitable will, were required to set sail with that tiny convoy, manned by a superstitious crew, on what the skeptic Spaniards called a journey to the end of the world! But Columbus had the courage of his convictions and he triumphed. An empire of undreamed-of riches was his reward.

Courage wins in business, too. When S. Gumpert Co., Inc. first announced to the ice cream industry the development of a flavoring superior to vanilla, when we first placed Vannyl on the market and told of its many advantages, many were the scoffers, the pessimists, who ever haunt the path of progress. But we knew we had a far superior flavoring, and we proved it.

Today, America, discovered by Columbus, is the richest and most prosperous country in the world. And today, the hundreds of ice cream manufacturers who use Vannyl, are the leaders in their industry. They are making richer, better-tasting ice cream—ice cream of a finer, more refined flavor—and making it much more economically. Thus the courage to test Vannyl has rewarded them as it will reward you, too, in generous measure.

Gumpert's Vannyl

Co-operation Stressed at Mississippi Convention

Convention at Laurel Featured by Adoption of Constitution—Vicksburg Gets 1925

Convention—National Convention Discussed—To Hold District

Meetings—Seale Named President

CO-OPERATION was the keynote of the annual convention of the Mississippi Ice Cream Manufacturers' Association. The convention was held at Laurel, January 8 and 9. Hotel Pinehurst was convention headquarters.

Convention speakers stressed heavily upon co-operation in all its forms. J. W. Clopton, secretary of the Southern Association of Ice Cream Manufacturers, told the delegates some very important things about co-operation between the state and southern associations.

"In order to secure desired results it is absolutely essential that the Southern association co-operate to the fullest extent with the state associations affiliated with it. This co-operation cannot be successfully affected by one party. It is just as essential that each state association give the same degree of co-operation to the Southern," he said.

J. W. Mulligan, veteran supplyman, prepared a paper telling of co-operation between manufacturers and members of the supply industry. It was read by the secretary.

A. A. McLaren told the manufacturers about co-operation with the dealers of ice cream.

In the annual message of the president, S. N. Sutton, who was completing his second successive term as the leader of the Mississippi association, told his members how deeply gratified he was over the thorough co-operation developed in that state in recent years. The same thought was expressed by Secretary N. D. Brookshire, who also is beginning his seventh term as secretary of the association.

It was one of the best conventions ever held in Mississippi. The Laurel hosts, Messrs. N. C. Peterson and G. W. Barrett made good every promise for their city. Elaborate entertainment features were provided. Delegates all felt they had had a splendid convention and a very enjoyable stay in that city.

The convention was called to order by S. N. Sutton, president. Invocation by Rev. L. G. Gates, First Baptist Church, Laurel, Miss., followed. The Address of Welcome was by M. W. McLaurin, mayor of Laurel. The response was by C. R. Kent.

President Sutton announces following committees:

Resolution committee:—Harry A. Benners, chairman, A. K. Weaver and H. F. McWilliams.

Auditing committee:—J. F. Ford, chairman, V. L. King and W. G. Gray.

N. D. Brookshire then made his report as secretary-treasurer of the association for the past year. The report was referred to the auditing committee and afterwards submitted to the convention with the endorsement of this committee and adopted.

S. N. Sutton then made a report of the proceedings of the national convention in Cleveland. Mr. Sutton touched upon virtually all the principal work of the national convention.

In concluding his report Mr. Sutton urged that the Mississippi association to put forth every effort within its power to make the next annual convention of the national association a complete success. He called to the attention of the convention the fact that it was to be held in the South, at New Orleans, and that a Southerner was vice president.

Tuesday Afternoon Session.

First on the program was the annual address of the president.

"Outlook for Raw Materials" was discussed by Will H. Becker of Brookhaven, Miss.

A. A. McLaren, who had been assigned the subject of "Co-operation Between Manufacturer and Dealer in Serving the Public," was unable to be present but submitted a paper.

N. C. Pearson also spoke on this subject and

brought out some very important matter for consideration. "First the manufacturer must have a fair profit," said Mr. Pearson. "Without that business cannot continue. Our service to the public through our dealers is to furnish them a high quality produce," he said.

As a connecting link between the plant and the public Mr. Pearson recommended that the public be invited to visit the factory and witness the process of making ice cream. He also emphasized the value of furnishing the dealer neat packages for the delivery of the ice cream. He went into considerable detail as to the best methods of advertising.

McWilliams Speaks.

H. F. McWilliams of Hattiesburg also spoke on this subject. One of the principal features of his sugges-

Prospects for the Dairy Industry in 1924

By E. W. CHANDLER, President of the Creamery Package Mfg. Co.

The stage is set for a year of splendid prosperity for American industries. The year just passed was one of general satisfaction for all who were content to hustle for business and to sell at a moderate profit. The new

E. W. CHANDLER.

year should show continued improvement, although it will undoubtedly remain a buyer's market and the most luscious prizes will go to those who make the greatest effort.

The farmer's condition is much better than it was a year ago. It is true that last fall the wheat farmer suffered because of low prices, but wheat comprises only a small percentage of the national crop. Conditions with the cotton and fruit grower and the dairy,

corn and livestock farmer are much better than they were a year ago.

Inasmuch as the farm population comprises over a third of our entire population, the farmer's financial condition has a strong influence on the financial condition of the rest of us.

The building program of this country will go on with unabated vigor for some time to come. In spite of great activity during 1923, we have made very little headway against our housing shortage. A year ago it was estimated that the country needed one million new homes to properly care for our population and the same estimate is given for our present housing shortage. It seems vain, therefore, to expect any material reduction in labor or building costs in the immediate future.

The labor situation in the country is quite gratifying. No particular labor shortage exists in any line except the building industries and for unskilled labor. And yet probably every man who wants to work can do so, and at the highest wages in the history of the country, with the possible exception of war times. At the same time production costs are comparatively low. The workman is giving the best he has to the job. His

prosperity also is passed along to all other branches of trade.

The political situation is satisfactory despite the fact that 1924 is a presidential year. The Federal Reserve Act no longer permits politics to adversely affect business. The new congress is almost evenly divided between the two parties and while nothing very constructive can be expected from this source during the present year, neither can anything detrimental be anticipated either.

Conditions in the dairy industry never appeared brighter. As a result of the excellent publicity and educational work of the national and state dairy councils, and U. S. Government, the individual manufacturer and distributor of dairy products and various other agencies, the American public has a much higher appreciation of the value of dairy products as a part of its diet than ever before, and is slowly but surely increasing its consumption of these foods.

In order that the industry may remain in a healthy condition, the production of milk must keep pace with the consumption, or high prices will drive the buying public to the use of substitutes. Happily the production side is not being neglected. Through the tremendous stimulus of The National Dairy Show, the good work of the U. S. Dairy Division, and the work of bankers, Chamber of Commerce and other business associations in many different parts of the country, the milk producer is rapidly being educated to the value of pure bred bulls as well as to the increased benefits resulting from more sanitary conditions on the farm and the wider adoption of labor-saving machinery.

The meeting last October of the World's Dairy Congress at Washington, Philadelphia and Syracuse focused the attention of the world on the American dairy industry. Each foreign delegate returned to his country with great enthusiasm for American dairy methods; each of them will be apostles and will spread their enthusiasm and the knowledge they picked up of American ways to all with whom they come in contact. In the years to come this influence will be of lasting value to American dairying.

True enough, the dairy business, like other branches of human activities, has its difficulties; our couch is not always a bed of roses. But when we consider everything, we must agree that we are engaged in the best business on earth. We not only get our living from our vocation but we can be proud to remember that simultaneously with getting our living, we are producing a product that is of the utmost benefit to the human race. And we will continue to prosper and enjoy life in proportion to our efforts to increase our efficiency and improve our product.

PLEA.

In the parlor, O my darlin',
When the lights are dim and low,
That your face is thickly powdered,
How am I, Sweetheart, to know?

Every week I have to carry
Every coat that I possess
To the cleaner's—Won't you, darlin',
Love me more, and powder less?

Salesmanship—Its Relation to Success

By J. W. RIDGWAY*

THE attainment of success in life is the desire of every individual, but different individuals have different ideas as to what constitutes success. Success is the achievement of something worth while and not merely the accumulation of worldly goods. We come in daily contact with men who have made such a success of failure that we might hastily conclude that they had put forth effort to fail. Such is not the case, for every one desires to succeed and failure can be attributed to the violation of some form of law. There are laws made by man, there are laws of custom, and there are God-made or natural laws. It is a violation of the latter that is largely responsible for man's downfall, because the violation of natural laws leads to the neglect of the law of custom and later to the violation of man-made or statutory laws.

Salesmanship in some form enters into every activity or achievement of life. In fact, the success of life is based on good salesmanship. We start life with a selling talk in the form of an infant's cry for some nourishment, and in old age when we pass over the great beyond, we write upon our tombstones, "Here lies so and so, born such and such date, and died." This latter is advertising. So from the cradle to the grave man is engaged in selling something to somebody. The man

* Director, Dairy Development Department, Mistletoe Creameries, Houston, Tex. An address before the annual meeting of the Texas Ice Cream Manufacturers.

who at the age of thirty, for instance, has not sold himself to some good woman is a very poor salesman and the old bachelor of thirty-five or forty posing as a salesman is my idea of one engaged in fraudulent practices.

This outer circle (sketching on the board) will therefore represent Success as indicated by the letter S, not the success that many of us think, the amassing of a fortune, but really in the accomplishment of something worth while. It might be in the making of a high grade quality of food products such as you men are engaged in, and thus giving the consumer of this great food a dollar's worth of nutriment, palatability and purity for his dollar expended. Or it might be in the building of a great bridge or in the invention of some machine that would contribute to the pleasure and profit of humanity.

As stated in the beginning, some form of salesmanship is essential to success, and the next circle is to represent salesmanship which contributes towards success. Henry Ford's success as an automobile manufacturer can be attributed to his superior salesmanship of efficiency inspiring his workmen to greater efficiency by their belief in his ability. His method of manufacturing automobiles has been sold to other organizations and his product is used because the public believe that they will get a dollar's worth of automobile value in every dollar expended.

I care not what your politics might be, I think you will agree with me that Woodrow Wilson was the greatest salesman of statesmanship of his time. As a politician he was a dismal failure, but as a statesman he was a profound success. We have but to review the constructive legislation enacted during his administration, including the Federal Farm Loan Act and the Federal Reserve System, the former placing agricultural financing on a sound basis, the latter in spite of criticism directed against it averting a panic during times of financial distress. Wilson could never have accomplished this legislative enactment if he had not sold his honesty of purpose, his personality and his superior executive ability to the public and through them to Congress.

But we must sell something if we are to attain success, and that something is the much used and greatly abused term "service," as represented by this inner or heart circle. We (referring to board) thus complete our chain of circles which might be expressed thus, Service, properly sold, makes for success.

There are various interpretations of service but in its final analysis Webster's old definition of it as being synonymous to work is not very far wrong. Did you ever analyze your work or that of your fellow workers? We see many people who turn out great quantities of work but who are careless and make mistakes, thus necessitating more work to correct the mistakes. And again we come in contact with a man who is very careful in his work, painstaking, but he hasn't the ability to turn much quantity; in other words, the quality is right but the quantity is low. We represent this quantity and quality by the two sides of a triangle (sketching on the blackboard). And then again we see the person, it might for illustration be an auditor, who turns out large quantities of work with but few mistakes. His addition and his figures are correct and his accounts are always in the best of order, but yet this triangle of

work is not complete. There is a possibility of his being disagreeable and cross with his fellow employees. He doesn't fit in with the organization and he has a way about him so aptly expressed as "rubbing the fur the wrong way." The base of his triangle, "his mode of conduct" is all wrong and his work is out of balance.

Show me a man who turns out the right quantity of work, makes few mistakes, who is always willing to lend a helping hand and who is pleasant and agreeable to his fellow workers, and I'll show you a man, who if he employs the right salesmanship for his work, is headed towards success.

Did you ever apply the yardstick to your personality? Not your personality as it is often misunderstood as relating to personal appearance and gift of gab, but the personality which determines your success. For descriptive purposes we will say that personality is like a square, and it is a law of mathematics that a square has four sides. The first side (drawing a line on board) we designate with an E which stands for Endurance. Endurance is largely physical and can be had only through a sound healthy body. Health is largely a matter of eating properly, breathing correctly and exercising right. Many failures can be attributed to lack of endurance when the real test came. Health is attainable to any one who observes properly the laws of nature.

We draw another line of equal length over here which we designate with an A to represent Ability. This is largely mentally and has to do with the development of the mind through such methods as providing the right mental food together with employing proper mental exercise. The possibilities of mental exercise are astonishing, and one has the satisfaction of knowing that mental ability can be developed to any point desired.

But endurance and ability will not complete one's personal square. The penitentiary is full of men abounding in these two attributes. So we draw on the top and connect these two lines with what we shall call Reliability as designated with an R. I am sure you have come in contact with people whose endurance is remarkable, whose mental ability is faultless, but when they tell you something, "O Well, we just don't know whether it is true or not." They are lacking in that quality, the greatest of all abilities, Reliability.

Bankers tell us that they make loans, not so much upon one's endurance or yet again upon one's mental ability, but quite largely upon what they term as Moral Responsibility, but what is really Reliability. Our square like the triangle does not yet have a base. It is not complete. We see men endowed with great physical endurance, their mentality is way above the normal, their reliability is not to be questioned, and yet they fail. Why? He lacks the base line of his personality, we might term Action as indicated by another A. Action is to the complete personality what the spark is to the motor. It is a co-ordination of endurance, mental ability and reliability to the end that the personality functions properly.

Thus we have the complete square and it is of interest to note that it spells A R E A, Area. So my friends, in conclusion let us analyze ourselves in terms of the area of our personalities. This area is in proportion of the square of its shortest side. We might be strong in endurance, a wizard in mental ability, and regular human dynamos of action, but if our line of reliability has been shortened by some misdeed which has shaken the confidence of our associates, our area and thus our service is shortened in proportion.

As a chain is no stronger than its weakest link so our square of personality is no larger than its shortest side. But the comforting thought is that all of us possess the possibilities of enlarging this square by strengthening our weakest side.

* * *

Vice-President Mathewson: Although the subject of "Salesmanship" is somewhat out of Mr. Ridgeway's line, he has done very well and I am sure that you all have received a great deal of inspiration from his talk.

I am going to ask Mr. White to introduce you to Dr. A. H. Ruehe of the University of Illinois.

Mr. White: We are indeed fortunate to have with us Dr. A. H. Ruehe, University of Illinois, Urbana, Ill. The University of Illinois, Dairy Department, has done a great deal of research work along lines of ice cream manufacture and we are going to ask Dr. Ruehe, head of the dairy department, to tell us about it. Dr. Ruehe.

Factors Influencing the Quality of Ice Cream

By DR. H. A. RUEHE*

THE ice cream business like all other businesses can be divided up into its various divisions, such as procurement of raw materials, manufacturing, financing and distribution. Each phase has its many problems which all manufacturers, both large and small have to contend with and strive to solve if their business is to prosper and return a profit.

It is not my intention to attempt to point out all the symptoms of these and try to administer a "cure all," panacea, nor even an antidote. However, I should like to discuss at least one phase of your business,—the manufacturing side.

No matter how successful your business is financed, and no matter how good a service you are able to give your customers, your business will not prosper for long if you do not furnish your trade with a good wholesome, palatable product. Your customers are your judges and they will continue to exercise their rights so long as you are striving to sell them your product.

I think I am safe in saying that there is no food product, that is as variable as is ice cream. If the industry is going to prosper, the ice cream manufacturers must strive their utmost to make the name ice cream mean something. Your product must be made more uniform in composition, both physical and chemical, if the industry is to meet the demands of the consumer. It might be well to also mention that only good, wholesome and clean flavored products should be used in preparing an ice cream mix. Off flavored milk, cream, butter, condensed or powder will not produce a clean flavored ice cream, no matter how much flavoring extract is used.

It is not the intent of this paper to discuss ice cream standards from the legal point of view, but merely from the standpoint of making a product that the consumer will appreciate. To be sure, there must be legal standards, but unless I am badly mistaken, it is the purpose of a standard to establish minimum and maximum requirements, and they do not attempt to give a recipe for the making of good ice cream. It is the duty of the ice cream manufacturer to formulate his own recipe, one that will make a satisfactory, pleasing, and uniform product.

There is no doubt but that frequently too much attention is paid to the fat content of the mix and not enough attention paid to the milk solids not fat. To be sure, a certain amount of fat is necessary if the ice

cream is to have the desired richness which gives it the creamy flavor, but unless the fat is properly balanced with milk solids not fat, success will not be attained. This was clearly demonstrated by experimental work carried on at the Illinois Experiment Station. Criticisms of 150 samples of ice cream containing a uniform amount of sugar, but representing twenty different compositions as regards milk solids, indicate the following:

"1. The kind of milk solids has more influence upon the texture, resistance and body than the amount of total milk solids.

2. "The milk solids not fat are more essential than butterfat in this respect.

"3. Ice creams containing 12 to 18 per cent milk solids not fat often develop sandiness in two to three weeks time. Those containing less than 12 per cent rarely become sandy.

"4. The flavor of ice cream is improved by increasing the percentage of butterfat."

This work also showed conclusively that unless the proper amount of milk solids not fat were present, the ice cream did not have a smooth close texture with proper resistance even though the fat content was as high as fourteen per cent. Furthermore, it showed that a certain amount of milk solids not fat is required to protect the fat from churning and producing a buttery product. Upon the other hand, sandy ice cream usually resulted when too high a percentage of milk solids not fat were used.

A summary of the detailed criticisms regarding the texture, resistance and body, is given in the following table:

Table No. 1.

Per cent Fat	Per cent M.S.N.F.	Texture	Resistance	Body
8	6	Very coarse	Lacking	Light
8	10	Coarse	Lacking	Light
8	12	Coarse	Lacking plus	Light plus
8	14	Smooth	Good	Good
8	18	Very smooth	Good plus	Heavy
10	6	Very coarse	Lacking	Light
10	10	Coarse	Lacking	Light plus
10	12	Coarse plus	Good	Good
10	14	Smooth	Good	Good plus
10	18	Very smooth	Too much	Heavy
12	6	Very coarse	Lacking	Light
12	10	Coarse	Lacking	Light
12	12	Smooth	Good	Good
12	14	Smooth plus	Good plus	Heavy
12	18	Very smooth	Too much	Soggy
14	6	Very coarse	Lacking	Light
14	10	Coarse	Good	Good
14	12	Very smooth	Good plus	Heavy
14	14	Very smooth	Too much	Heavy
14	18	Very smooth	Too much	Soggy

According to the results of this research work, ice cream containing but 8 per cent of fat must contain approximately 14 per cent of milk solids not fat in order to be smooth and of good resistance; with 10 per cent of fat, 12-14 per cent of milk solids not fat; with 12 per cent of fat 12 per cent milk solids not fat; and with 14

Canadian Office and Warehouse: 55 Cote Street, Montreal

per cent of fat there should be 10-12 per cent of milk solids not fat. These mixes were not homogenized. Further study has shown that when the mixes are homogenized, the milk solids not fat can be reduced from one to two per cent. This is important, especially with the mixes containing the higher percentages of milk solids not fat, because of the tendency of ice cream containing more than 12 per cent of milk solids not fat becoming sandy when stored.

Perhaps you would be interested in seeing what effect the overrun has upon the quality of ice cream. The study which we are making along this line has not been completed, but so far the results obtained are quite consistent and no doubt are indicative of what we can expect.

Table No. 2.

% Fat	% Milk Solids Not Fat	% Overrun	Texture Perfect Score 25	Resistance Perfect Score 15
8	8	75	18	12 ½
8	8	100	17	12
8	8	120	15	11 ½
8	8	150	14	11
10	12	75	22 ½	15
10	12	100	22	15
10	12	125	19	13
10	12	150	18	11
10	12	175	16	10
14	10	55	23 ½ heavy	14 too resistant
14	10	75	24 ½	14 ½
14	10	100	25	15
14	10	125	22	15

Table 2 shows that although an ice cream mix may be of the proper composition, as regards fat and solids not fat, the quality of the finished product can be impaired by not incorporating the proper amount of air.

The chemical composition of the ice cream mix is

within the control of the ice cream maker and by careful standardizing he can keep this uniform from day to day. However, even though the composition is uniform, there are many factors which do effect an ice cream mix. Some of these are, sources of the milk solids (superheated or unsuperheated condensed milk, milk powder, etc.), viscosity of the mix, acidity of the mix, the temperature and pressure of homogenizing, etc.

Superheated condensed milk tends to give a smoother product than does unsuperheated. When the mix is not homogenized, from one to two per cent less milk solids not fat are needed when superheated condensed milk is used as compared with the unsuperheated. When the mix is homogenized this difference is not quite so apparent; however, one per cent less milk solids can be used in the case of superheated condensed. A higher overrun can also be obtained when superheated condensed is used. This is more noticeable with the un-homogenized mix than with the homogenized.

Proper aging of the mix before freezing is very important as this tends to increase the viscosity of the mix; but acidity should not be permitted to develop in the mix during the aging process. This can be prevented by properly pasteurizing the mix before it is to be stored and then storing it at a low temperature. The development of acidity in an ice cream mix above a certain limit tends to reduce the viscosity of the mix, and furthermore, too high an acidity will injure the flavor of the product.

These are but a few of the facts that the successful ice cream maker must be cognizant of if he is to do the most for his business.

* * *

Vice-President Mathewson: That was, indeed, a very interesting address. If there are any questions I am sure Professor Ruehe will be glad to answer them.

Mr. White: Do you recommend homogenizing the super-heated condensed milk?

Prof. Ruehe: Yes, we recommend adding the superheated condensed before homogenization.

Vice-President Mathewson: What do you consider the highest amount of serum solids that can be safely incorporated in the mix without having sandy ice cream?

Prof. Ruehe: I would say about 12 per cent.

Prof. Baer: I wonder if everyone understands that Professor Ruehe used four ounces of gelatine to the ten-gallon batch and not four ounces to the hundred pound batch of mix? Am I right, Professor, in assuming that you used four ounces to the ten-gallon batch?

Prof. Ruehe: Yes, in the figures that I have given, I said that I used four ounces to the ten-gallon batch of ice cream.

Meeting Adjourned.

* * *

Tuesday, November 27th.

Meeting called to order at 2:00 P. M., Vice-President Mathewson in the chair.

Vice-President Mathewson: We will now have an address by L. M. Kelsey of Galveston.

Mr. Kelsey: I have not prepared any address to deliver to the Texas association, as I did not plan to make a talk. There is just one thing that I would like to talk about, and that is, how we can best satisfy the leading ice cream dealers. This is a very big subject for discussion, as they are not very easily satisfied.

There is one thing we can do to help satisfy the retailers, and that is to improve the quality of our ice cream. We want to make a better quality of ice cream. Make our cream more palatable and thereby increase its

sale. Government men say that as the quality of the product is improved, so the consumption increases.

I am doing my best to make a better quality of ice cream in Galveston, and I know that many ice cream manufacturers in other cities are doing the same, and if every other manufacturer will do this you will soon find that Texas will be noted for its ice cream, and for its high per capita consumption of ice cream. I do not believe that we have reached the highest point of quality in the production of ice cream, and I would like to know what the people of other states think of the product that we make in Texas.

In the thoughts that were given to us yesterday there were some very valuable suggestions brought out, and I hope that you have all received a great deal of benefit from it, and that those who are not here may find the thoughts reproduced in the trade papers.

I want to thank all of you for coming to Galveston. We want to make Galveston the convention city of Texas. Usually we have ideal weather conditions here. It is not, as a rule, so disagreeable as it is today. Such weather as this is unusual. I often wonder why people will go to Florida to spend the winter when they can come to Galveston and enjoy such ideal weather conditions as we usually have in this city in the winter time. I hope that Galveston will eventually be adopted as the permanent convention city for the state of Texas and further that it will be unanimous.

I thank you.

* * *

Vice-President Mathewson: We will now hear from W. W. Wren of Ft. Worth, who will speak to us on the value of ice cream associations.

* * *

Value of Ice Cream Associations

By W. W. WREN, Ft. Worth

AS I attempt to stand before you and give you a thought on ice cream associations, I wish I were in the same position as a minister who was preaching to his congregation. He had a splendid congregation. He was a splendid man and had a splendid reputation. He had a son who had about the same reputation as most ministers' sons have. The preaching was going along very nicely and suddenly the minister discovered his son among the members of his choir above throwing paper wads down on the congregation. He stopped in his talk suddenly hoping to inform his son

in this way that he had been discovered. The son shouted from his position in the choir, "Go ahead with your preaching, dad, I'll keep them awake."

As Mr. Ridgeway said yesterday, in this generation a man is not judged by the amount of business he can command, or the amount of money he has but by the amount of service he can render his fellowmen. Inasmuch as this applies to man, it also applies to other things and especially to the associations of men. If the Texas Association of Ice Cream Manufacturers is to be of any value it must do something. If it assists and benefits a few men who are connected with the association and does no more than this it is a failure. If it benefits all of the men who are members of the association and does nothing more it is also a failure. If it benefits all of the men in Texas and no more, it is still a failure. So if the association is to be of any value it must be of assistance to a greater number of people, or we might say, the entire population or consuming public, or that part of the consuming public that eats ice cream. If the Texas association does that it is worth while. If it did not do that, I would not want to be associated with it.

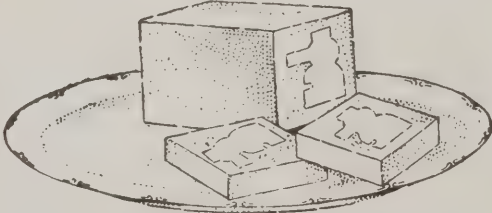

Do you know who is responsible for the regulation of traffic on the city street? It is Necessity. It became necessary for someone to regulate the traffic in the cities of this country. When it became necessary it was done. This association was formed out of necessity.

The framers of the Food and Drug Act of June 30, 1906, did not know anything about the ice cream business. The statesman who passed the measure did not know anything about it. The general public know very little about it and those engaged in the ice cream business knew less about it. In 1907 it was put in operation. Those engaged in the manufacture of ice cream knew the regulation as far as the federal government was concerned and the different states putting the measure into effect were guided largely by the rules of the federal government in that act. Some manufacturers took exception to these rules and it came about in June of that year that those engaged in the manufacture of ice cream were called to a meeting in Dallas to form a state association. The meeting was attended by the majority of those engaged in the manufacture of ice cream at that time. The first annual meeting was held in San Antonio in the following spring and a standard for ice cream in Texas was taken up with the depart-

ment at Austin. The manufacturers had a committee meet with the state dairy commissioner. You are acquainted with what the results of this meeting were. Some time later the association, through their committee, took upon themselves to ask for a hearing before the railroad commission asking that the rate on ice cream moved between points in Texas be reduced. As a result of this meeting ice cream was taken out of the specialty class and put into the commodity class resulting in the lowest express rates for ice cream in the entire United States. A reduction from 15 cents to 5 cents for empty containers was asked for and this resulted in a reduction on containers of five gallons and under to 5 cents and containers larger than five gallons at 15 cents for their return.

When the war came on and the consolidation of the express companies, the pick-up and city service carried on by express companies previously were discontinued and the Inter-State Commerce Commission wanted to increase the express rate on ice cream. The Inter-State Commerce Commission ordered a hearing held in Austin and the express rate committee of the Texas Association of Ice Cream Manufacturers met the Inter-State Commerce commission at that time. The request of the express company was for an increase which amounted to about 20 per cent. They wanted to nullify the special rate we were enjoying in Texas. Our committee sent out a questionnaire and compiled a considerable amount of data which was submitted to the commission with the result that 12½ per cent increase was allowed. Again Texas went ahead with the lowest rate of any state in the United States. Afterwards when the express companies asked for another increase brought about by demands for increase in pay by employees,

the ice cream industry got away with a smaller increase than was asked for by the express company by a considerable amount.

The next thing the express company asked for was a change in the classification of ice cream. As you know, ice cream moving between points in Texas is shipped at a billing weight of 100 pounds per five gallon package. The express company asked that the state classification be made to conform with the inter-state classification. Before any hearing was held the express company took the initiative and increased the classification on intra state shipments to 115 pounds. This classification took effect in December. A hearing was held in February. The committee met with the commissioner in Dallas and before the case was called the committee asked the railroad commissioner for a hearing. Every ice cream manufacturer in the state sent in a claim for an overcharge and the express company asked if they would withdraw their request for an increase in the ice cream classification, if the Texas ice cream manufacturers would refrain from making any overcharge between the 15th of December when the classification was changed and the date of the hearing. The committee agreed that no claims for overcharge would be filed as the overcharge made on shipments of ice cream made during the winter did not amount to very much anyhow.

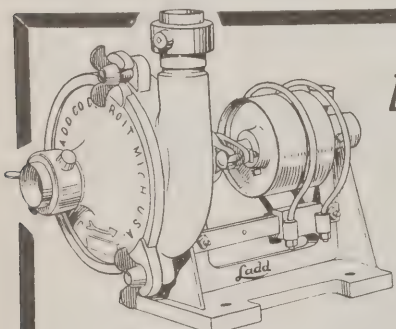

After this the legislature was in session in Austin and were asked for a luxury tax on ice cream. The association man made two or three trips to Austin and you are all aware as to the results obtained. There was no tax put on ice cream. This ice cream tax idea was killed because of the activities of the association and the committees having the matter in charge. The bill was pigeon holed and we were given to understand that nothing will be said about it at the present time.

The question is whether the public has been benefited by the activities of the association or not. If he has, the association is worth while and should be supported. In my judgement, it has been a great deal of benefit to the public and I want to leave the matter to the judgement of the other members of the association.

I thank you.

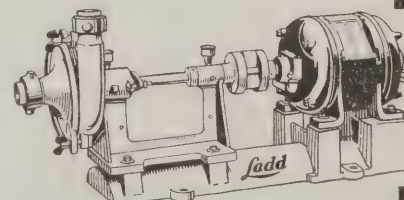

Vice-President Mathewson: Mr. Wren has outlined to you only a part of the great work that has been done by this association and I believe you are all satisfied with the work and I want to say that to my opinion the association has functioned properly and has done a great deal of good. We will now have the address of A. S. Pimental on the subject of advertising.

Advertising

By A. S. PIMENTAL, Houston, Texas

Mr. Pimental: In addressing you today regarding advertising I am prompted to say that I am something like the prohibition advocate who was talking about illicit liquor. He said that he was very much enthused over the idea of prohibition and he was full of that subject. I am very much over-enthused over the idea of advertising and I am full of that subject. I have been in the business more than thirteen years and I want to give you just a few high lights of the advertising business that has come up in the last few years. I am inclined to give you my personal opinion and ask you to either accept it or reject it, as you choose.

I am talking to you now about advertising and I am inclined to convey my idea to you that I reach only a comparatively few men. Just a mere handful. If these ideas were put down on paper so they would be read and published in the big magazines and newspapers it would reach a much greater number. It would have to be prepared in a different way. Advertising, whether it be for ice cream or any other product, is merely another form of salesmanship, intended to convince the prospective buyer that ice cream should be purchased and used as a food, but the argument in favor of it must be prepared from a different point of view when the idea is put across in advertising than when you are talking to one of your customers personally. Through advertising you have to convey to readers of a publication the idea that ice cream is a food. You have to create a desire for ice cream and then tell them where to buy it.

What the ice cream manufacturing industry needs is

more good advertising and less fighting among competitors. Competitors should use the energy and the money that they use against each other trying to take away each others' customers to sell more ice cream. In good advertising there would be a better general feeling among the trade and they would sell more ice cream. Let us quit quarreling among ourselves for a while and sell ice cream.

About eighteen months ago a full page advertisement began to appear in the Saturday Evening Post over the signature of the American Laundry Machinery Company. People seeing this advertisement appear in the Saturday Evening Post week after week may wonder why the American Laundry Machinery Company can use this expensive space to try to sell their laundrying machines. Of the many readers of the Saturday Evening Post very few of them are prospective buyers of laundry machines and it may seem foolish for them to use this space but they are using the longest way around to increase their business and to fight competition. They realize that every negro woman in the South is a competitor of the laundry. They realize that the negro woman does not use a washing machine. They are convincing people through their advertising that they should send their clothing to the laundry and they expect the laundry men to have brains enough to follow up the national campaign through local newspapers with their national campaign. They are doing this advertising to help the purchasers of their equipment to increase the number of customers of the laundries and to eliminate just as much as possible the little washwoman competition.

Dry cleaners are doing the same thing. Big dry cleaner companies who are running a modern up-to-date business are putting on a campaign urging the fellow to send their clothes to responsible cleaners. They are teaching the public that the little cleaning establishment that is equipped with nothing but a flat iron and a press board cannot give the service they can expect from the larger operators. The big cleaners are responsible. You are bound to have your suit of clothes returned. Your clothing is insured. If the establishment burns down over night you are going to be repaid for your loss. This is a part of their service to the public and one of their services that is being advertised in the national campaign.

Co-operative advertising has been successful so long that there should be no doubt in the minds of the ice cream manufacturers as to the necessity of their going into it. It seems that most of you do not realize that it is necessary to start such an advertising campaign now. You don't realize it until you get into a tight place and are forced to it. You can throw a frog into a tub of hot water and he will not be very long getting out of it. But put him into a tub of cold water and put a fire under it so that it will heat gradually and that fool frog will stay there until he is cooked to death. The change of temperature will be so gradual that he won't realize what is going on.

The chewing gum business is a good example of what advertising will do. In 1891 there were only one half million packages of chewing gum used in a year. Now there are sixty-two million. I am wondering if we are really progressive or if we are just getting back to the cow and cud stage.

Tobacco is another example. There is no food value in tobacco, no such reasons for using it as to say it is healthful food. The sale of tobacco surpassed that of

Miller Refrigerator Bodies

"We SELL you one—you BUY more"

"After the initial charge of ice and salt of approximately five hundred pounds, it took no more than three ordinary pails of ice and salt to repack each wagon daily, and the temperature in the ice cream compartment was maintained at from six to eight degrees above zero."

J. C. VANDER BIE CO.,
St. Paul, Minn.

This company is using six Miller bodies.

ice cream. The tobacco people have increased the use of tobacco many times over in the past year.

Take coffee. Drinking coffee is a habit. There is no food value to it. Yet people will drink it three times a day. A business man's lunch is not complete anymore without a cup of Java.

When the war came on and it was decided to win the war by eliminating whiskey, light wines and beer, the raisin growers in California woke up to the fact that they were going to be without a market for their product. They had a big organization in California manufacturing grapes and raisins into light wines. It looked like the big plants were going to have to close as they would not have a market for their product. Everyone knows what happened. They got together, put on a big advertising campaign and now everyone is eating raisins so that they get their iron today. Raisins is a food that has become a household word. The little five cent packages are sold in grocery stores, confectioners, drug stores, everywhere. What has been done for Sun-Maid raisins can be done for ice cream. The Texas ice cream manufacturers have got to get together and advertise and talk more ice cream. I have seen more advertising for ice cream in this little song book than in any advertising you are putting out.

I understand that most of the ice cream manufacturers of Texas could double their output with little or no extra investment of modern equipment. With a small investment in good advertising you could greatly increase your business and profits. It would be good business insurance. You are now standing on the threshold of a new year. This would be the proper time to begin to tell the people of your communities in an intelligent way that they should eat more ice cream.

I thank you.

SOUTH DAKOTA ICE CREAM MANUFACTURERS MEET AT WATERTOWN FEBRUARY 19, 20 AND 21.

Mechanically Refrigerated Cabinets

(Continued from page 10)

of machines and cabinets for several manufacturers jointly. I would earnestly suggest that you consider this suggestion carefully. I can see no valid objection to this plan and it would mean a great saving of time and money. This work of installation should proceed in a quiet, orderly manner if ultimate cost is to be considered.

Let your plans be well thought out and not the result of a haphazard scramble to pry loose a few of your competitors before you take care of your own. Lay out your course before you start on a journey and provide sufficient capital to take you for the round trip. It will not be easy to "back-track" when you are once on your way.

Many machines and many refrigerants will be brought forward for your consideration. Some machines will have unquestioned merit behind them and all of the various refrigerants will have some points of superiority over the others—no one refrigerant is perfect whether ammonia, sulphur dioxide, methyl chloride, carbon dioxide, ethyl chloride, propane, or some of the secret refrigerants which have, or will have, more or less extravagant claims made for them.

All machines will sooner or later require servicing and therefore see to it that the machines are accessible for servicing requirements. You may disregard the question of danger when considering any one of the above refrigerants as all machines which reach a marketing stage will have provided ample margin of safety against pressure or otherwise. No machine is now, or

ever will be, "fool-proof." It does not matter to your customer whether a fuse blows out or a bearing burns out due to lack of lubrication, the result is the same—"soft ice cream" and a call for the service man.

No Mystery About Operation.

There is no mystery about the operation or mechanism of any machine regardless of the kind of refrigerant used; all operate on the same principles but unquestionably some will be designed better, more evenly balanced, less friction load, better motors perhaps, quieter in operation and I would say at this point that quietness of operation is a very desirable quality in a machine. All things being equal, all machines will within extremely close limits consume the same amount of power for a given capacity and the same amount of condensing water. I am not convinced that an air cooled machine for cabinet use is a practical proposition because of the large volume of air necessary to be moved to remove the heat from the condenser.

The real heart of any automatic system is in the automatic controls, the devices which start and stop the machine and shut off the condensing water at predetermined temperatures in the cabinet or fountain. A non-automatic machine will not long succeed and one with faulty, inefficient controls will soon fall by the wayside. The automatic expansion valve, or float valve is only secondary in importance to the electric controls. I believe that the ultimately successful machines will be equipped with high pressure cut-outs and pressure controls actuated by the temperature in the brine tank of the cabinet, or fountain.

The flooded system with float valve instead of an expansion valve is to be preferred for cabinet and fountain work. Lubrication should be automatic, or nearly so to the end that infrequent inspections may be necessary to keep the equipment in a high state of efficiency. Beware of new principles and machines that claim revolutionary ideas in refrigeration. The best that we may expect are refinements on long established and well known principles.

The small machine serving a cabinet of four to ten holes should have a minimum of 250 pounds of actual refrigerating capacity during an operating period of twenty-four hours. It is not intended, however, that the machines should operate continuously for twenty-four hours. Intermittent operation is preferable from a psychological standpoint if for no other reason. Your dealers will begin to get uneasy if the machine operates continually—they will imagine that the machine is using up a tremendous amount of current, particularly if they are paying for it and complaints will come in that they are being ruined financially. A machine of 500 to 750 pounds of refrigerating capacity is ample to handle all the requirements of a properly designed soda fountain handling sixty gallons of ice cream in addition to the other fountain products. It will probably be found more economical to install a single machine to handle a completely refrigerated fountain than to have two cabinet size machines do the work.

Available space for cabinets in your dealer's premises frequently necessitates the use of "single row" cabinets, meaning that but one row of five gallon packers is used, however, a single row cabinet, no matter how desirable it may be from the viewpoint of utility, costs nearly as much to refrigerate as a double row cabinet holding twice the amount of cream. As a matter of

MICHIGAN MANUFACTURERS ARE SET FOR ACTION AT KALAMAZOO FEBRUARY 4, 5, 6, 7 AND 8, 1924.

fact a six hole double row cabinet holding sixty gallons of cream has only about twenty per cent more superficial area than a single row six holding thirty gallons. In addition to the great advantage of the double row cabinets in operating costs, the initial cost of the cabinet itself is hardly twenty-five per cent more than for the single row outfit. A question of economy in space, in operating cost and in first cost indicates the use of the double row cabinet.

Standardization is Desirable.

It would be desirable, though hardly possible, for all small builders of machines and cabinets to standardize on the same outside dimensions of cabinets. You can readily understand the confusion resulting when a fountain manufacturer attempts to standardize on a counter and a dozen cabinet manufacturers all build cabinets of varying outside dimensions. A lack of standardization will affect you adversely because you will, in the natural course of events, secure customers from your competitors. Will your cabinet fit in the place occupied by your competitor's cabinets? Will your customer be willing to pay for any necessary alterations to make the cabinets fit?

Whatever cabinet or fountain you may buy or recommend to your customers, be sure to insist on adequate insulation. A minimum of three inches of sheet cork with edges and joints properly sealed and waterproofed. Four inches is not too much insulation for these small cabinets—your purpose should be to keep the heat out of the cabinet and not to pump it out after it flows in through improperly insulated walls.

Some fountain manufacturers have been experimenting with refrigerated fountains but except in a very few

instances they have been content to do nothing in a constructive way. It is just as impossible to make a satisfactory refrigerated fountain by placing coils in the standard iced up job as it would be to make an auto truck by fastening a gas engine to the bed of a horse drawn truck. You must begin right at the bottom and completely redesign the interior if you are to have an outfit that will be satisfactory to the purchaser and the ice cream manufacturer alike. With the exception of a few, every fountain manufacturer seems to have missed the two fundamental requirements of a successful refrigerated fountain from the viewpoint of the dealer and the ice cream manufacturer. The fountain must contain all of the ice cream used by the dealer and it must refrigerate automatically and at pre-determined temperature all of the products of the fountain such as syrup pumps, bottled goods and a greater quantity of water and carbonated water than is now customary.

The short four-foot "bob-tailed" sections of fountains which are placed behind a counter with a refrigerated cabinet are at best a "stop-gap." I do not believe that they will be the ultimate solution of the refrigerated fountain, nor do I believe that a short section with a separate machine plus a refrigerated cabinet will be final answer, because, first, the "bob-tailed" section with refrigerated cabinet does not get the dealer out of his ice troubles. He still will be obliged to buy ice to handle his coils, syrup pumps and bottle compartment and the cost of ice for this purpose will exceed the cost of power for operating, or rather refrigerating his entire fountain providing it has been designed for single machine operation, and second, the cost of the refrigerated section plus the cost of a refrigerated cabinet will exceed the cost of a properly designed fountain and a single machine for handling the work.

As ice cream manufacturers we say that we are not concerned with any of the products of the fountain except ice cream. We will take care of our own product and "let George do the rest." I believe that we are, or should be, just as much interested in seeing that the ultimate consumer gets a good cold glass of water with his ice cream as we are to keep ice cream in excellent shape for serving.

A "bob-tailed" is poor business for the fountain manufacturer because one-half of his legitimate sale is assumed by the ice cream manufacturer who furnishes the cabinet free of charge to the dealer. It is a bad thing for the dealer, as he is, or will be, obliged to ice up his products other than ice cream, and it is poor business for the ice cream manufacturer because the refrigerated cabinet will cost him more to install than a machine capable of caring for the entire fountain. With a completely refrigerated fountain the dealer would be assuming a part of the burden that is rightfully his. There is a legitimate place for the cabinet machine and for the next two or three years until the fountain manufacturers look facts in the eye and begin a constructive program, the cabinets will outnumber the single machines three or four to one. There is hardly a fountain in use today that is not obsolete in the refrigerating sense of the word and the sad part of the story is that it is practically impossible to reconstruct them. A complete new work board is the only solution.

In commenting on the various phases of the refrigerated service, I do not wish to give the impression that I am opposed to refrigerated cabinets, or fountains. I am now and always have been very much in favor of them and believe that it is just as impossible to stop their ultimate installation as it would be to go back to horse cars and gasoline lamps. We, and I speak of our

To Meet a Change In Public Taste

Right now in many communities the ice cream buying public is showing a marked preference for the flavor of pure vanilla. This has resulted in a remarkable increase in the demand for our justly famous concentrate,

VANILLA ISOLATE

** a pure vanilla of delicious flavor, made from selected vanilla beans. It is a thoroughly practical product—convenient, economical, GUARANTEED to please YOU.

If your trade prefers a more pronounced flavor your logical choice is

VANILLCUM

This is pure Vanilla Isolate fortified with a small percentage of coumarin. Or if you require an extract of standard strength you can secure excellent results with

F. R. VANILLA

—an absolutely pure vanilla of very high quality.

industry in general, should be interested in any new servicing plans that mean better service at less cost. Less cost means an ultimate lower price and greater gallonage.

Machine service means less shrinkage, less ice crystals, no muss or slop on the floor, no unsightly cabinets, economy in floor space and general cleanliness and efficiency that is impossible with the use of ice and salt. Whether we will or not, machine refrigeration is here and we cannot dam the stream. We must plan to use and not abuse this new and important adjunct to our business. Do not regard it as something to be taken care of by the janitor or the office boy; use the same discriminating care and judgement that you have used in building up the splendid business which you are undoubtedly proud of and justly so.

Who is to Pay Cost of Operating?

Who pays for the machines or cabinets and who pays for the current? Except in isolated places it will not be possible to sell machines or cabinets to your dealers because it will be impossible for competitors in the same territory to agree that they will not install a machine free of charge for the dealer. The proposition of paying for current is one of the miggest stumbling blocks you will meet on your journey if you do not meet it squarely at the outset.

There is no valid reason why the manufacturer should pay for the cost of operation, yet your dealer will argue that you have always furnished the ice and salt and now that no ice and salt is necessary, why should the dealer assume this burden? You will probably not succeed in convincing him that he will save many times the cost of operation in the saving of shrinkage to say nothing of the saving of depreciation on his soda fountain,

that he will save an hour's work a day in keeping the fountain department clean and sanitary, that his business will be built up because he has a modern and sanitary equipment. If you can convince your dealer of all this and get him to agree to pay for current gracefully, I should say that you have missed your calling in manufacturing ice cream, you should now be in the White House at Washington, or at least occupying Mr. Hughes' chair in the cabinet. You are a supreme salesman and a diplomat.

If you pay for current on a meter basis, how are you going to control current abuse? Will your dealer keep the lids on the cabinet,—will he call you up if the machine operates continuously,—how will you keep him from making ice in the cabinet? Either come on point blank and refuse absolutely to pay for current or pay for it on the gallonage basis where you know definitely and beforehand just how much per gallon it is going to cost you,—then if the dealer is neglectful about the lids, or makes ice in the cabinet or fountain or chills his bottled goods or drinking water, he pays for the juice and if the machine runs continuously due to a defective float valve or automatic control, he will phone you because he has a very definite interest in seeing the bills kept down.

We cannot always do as we should like to, or do what is fair to all concerned. We, and I speak now of the industry in general, do as competition compels us to do. Let competition cut a price and a war is on and how hard it is to regain the former price level after we all come to our senses. Begin paying for current on a meter basis and you will all pay on the same basis or lose your business.

You may be a big concern and feel that you can control the situation, but this is a case where the tail may wag the dog—you will absolutely be compelled to meet this innovation whether you like it or not. A cut in price will not move the menace and a price slash is a two-edged weapon that cuts in every direction. You will be obliged to put in machines anyway and probably have difficulty in restoring the former price level. Agree with competition about this current proposition, if it is humanly possible to do so. There must be a standard practice in this matter if the machine is to remain the servant and not the master. Agree, if possible, on a clearly defined plan for the solicitation of new stops that is to say new drug stores, confectioneries, etc., with mechanical refrigeration, agree if possible on the work that you will do in adjusting soda fountains to receive the refrigerated cabinets. There should be a very definite stand taken in this matter or the dealer will not only insist that you do all of the work of fixing up his fountain, installation of meter boards, plumbing, etc., but sooner or later may suggest that you pay his rent and furnish a limousine for whiling away the idle hour. Take care of your own customers before reaching out for the other fellow's or you may start a row that will make the Great War look like a sewing circle by comparison.

I do not believe that it is possible to keep machines out of any particular section or territory by mutual agreement. This is a new and logical method of servicing and it offers economies that are not possible with old methods, therefore it will not be legislated out of existence. View this thing wisely and prepare carefully. Lay out your sales plans and your financial plans as well as your plans for the installation of equipment—your sales plans must dovetail with the possible speed with which the machines may be installed.

You cannot refrigerate one hundred per cent of the first year. Take your customers into your confidence

The War of Competition

The concern that succeeds is the one that is able to lower its production costs or improve its quality. A CP Mechanical Refrigeration System enables the ice cream maker to do both.

It produces refrigeration at a lower cost than any other method can do, it saves labor and by giving the operator absolute control of the temperature, enables him to produce a better product.

Demands Mechanical Refrigeration

CP Refrigeration Systems are used by over 5,000 concerns, mostly in the creamery, ice cream and dairy industries. They are made in a wide range of sizes from $\frac{1}{4}$ ton up and can be obtained in either vertical or horizontal types, and be driven by motor or belt as desired.

that those who must wait will do so patiently and not jump the fence. After you have made all of your plans for financing the machines and installations, don't forget that you must also plan for amortizing this new equipment as well as the old obsolete cabinets and that you must find an outlet for the ice which you have equipped to make. None of these obstacles are insurmountable, yet we should not dash wildly around in circles and expect to get somewhere.

Do not look around the horizon for some new mysterious machine that is absolutely "fool-proof." Buy a machine and cabinet that is built along right lines, and I believe that you can be relied on to know when a machine or cabinet is built right, when it is insulated properly and whether the machine is accessible for service or replacement. Go ahead, but go carefully,—there is no machine today that has sufficient history behind it to warrant you in risking the financial stability of your business on it, yet if you proceed carefully you will not be risking your business on it.

Who profits most by the use of machine service? The dealer, of course. We know that the new method of servicing may save ten or fifteen cents per gallon even after allowing for depreciation, cost of ownership, etc., but I do not believe for a minute that the manufacturer will ultimately keep this ten or fifteen cents per gallon. This saving will ultimately be passed along to the dealer in a lower price of ice cream and we hope that the consumer may sometime share in this saving. Any sound manufacturing concern is satisfied with a legitimate profit on his turn-over and knows that any unusual or excessive profit will only result in inducing additional competition to come into the field.

There are many manufacturers who can not afford

to buy and install machines. Business at best is merely the survival of the fittest and we cannot dodge the inevitable. Unless the plan comes into being of a large, well-financed corporation whose business it is to make machines and cabinets and install them for manufacturers on a rental basis, then I can see where the struggling ice cream manufacturer who is now making every dollar do the work of five, will have a more serious job on his hands, regardless of the fact that he needs the refrigerated service even more than his wealthy competitor. One good result of this new service should be the elimination of the small one, two or three hundred gallon customers.

Our total gallonage will not be decreased by eliminating them, but our stops will be cut down, our investment decreased and business will be better for the larger dealers. It is probable that you may work out a plan where the small customers will pay a service charge per hole for the cabinet, plus the cost of operation, in which event it may not be unprofitable to serve a customer with three or four hundred gallons per season.

So far I have refrained from any technical description of cabinets or machines, believing that you are more interested right now in the question as to whether it is the right time to get into this new scheme of servicing ice cream, or whether you can sit back awhile and watch the parade.

Your customers are going to demand mechanical refrigeration within the next year or two at the outside and whether you begin now or later depends on your competitor. Let one competitor jump the fence and you will either buy or die. Take your larger customers into your confidence without delay, let them

know you are not a dead one and that you are investigating the various types of machines and cabinets now being offered,—that this refrigerated service may undergo some changes or developments and that you want to assure yourself that when you do select a machine for his use, it will be an asset to both of you and not a liability to you and a nuisance to him. Let him know that there will be developments in fountains that it may pay him to wait for before investing even four or five hundred dollars in a "bob-tailed" affair that may be obsolete within a year or two at best.

Make no mistake about the advisability of selecting wisely among the machines offered and shun those offering radical departures in design or principle from the standard practice of large machines. The principles of refrigeration are, and have been, well known for many years and you may expect no very great developments

except in design changes and refinements of details or controls. A great deal of money will be invested by our industry within the next few years in small machines and you must provide not only for the initial investment but the amortization of the obsolete equipment. It is natural that improvements may be looked for in small machines. A year or two of service in the field will do more to correct design, or construction, than a dozen years in the laboratory. Look for and demand accessibility, ruggedness in construction, simplicity in controls, compactness and quietness in operation, standardize on as few sizes of cabinets as is practicable, and above all things, look after your property when it is in the hands of your dealers, keep it in splendid operating condition, do not neglect it, make regular inspections and realize that these regular inspections will add years to the life of your equipment.

* * * *

Mechanically Refrigerated Ice Cream Cabinets

By GLENN P. COWAN*

THE advantages of the refrigerated cabinet from the standpoint of the manufacturer, consist of the improvement of his product as retailed—we have all been blamed by the consumer for making a poor quality of ice cream when as a matter of fact the ice cream was of good quality when delivered by the manufacturer, but deteriorated in the dealer's hands, due to the shortcomings of the salt and ice method of preservation. Other advantages are the widening of the manufacturer's zone of operation and the simplification of the driver and service problem.

The use of mechanically refrigerated cabinets by the established ice cream manufacturer increases his capital requirements. However, the investment in these cabinets cannot be considered entirely as an additional investment, for to a certain extent they replace the removal of other items of equipment. In case of the manufacturer starting in new, however, the capital require-

ments with the iceless system are not greatly in excess of those of our present system.

The saving in investment in refrigerating equipment, ice making plant, ice storage, salt and ice handling apparatus, and the smaller amount of floor space required in the factory, as a result of not having the ice making plant and ice storage, and the fewer number of trucks, smaller garage, and elimination of ice and salt cabinets, will make a large contribution toward the capital required for equipping dealers with mechanically refrigerated cabinets. This is also true to a certain extent in the case of the manufacturer who is obliged to expand his facilities in order to handle increased business. The use of this equipment, however, is a distinct advance in the art, and in all lines of business the adoption of automatic and labor saving machinery is making increased demands on capital.

From our observations it seems apparent that the use of mechanical refrigeration for dealers will come into more or less general use quite rapidly. I think this is the opinion of most ice cream manufacturers.

* Detroit, Mich. This is an excerpt from address before national convention. Watch for his complete address in an early issue.

The Mechanical Refrigerated Soda Fountain

By JERRY TUNNISON*

MECHANICAL refrigeration is the economical, safe and logical solution of many of the problems that are facing the industry today. Ammonia refrigeration is not new to the industry as you have used it for many years for manufacturing and keeping your ice cream. It has reduced your overhead in your plants and it will reduce the overhead of delivery and labor and eliminate the cost of cabinet ice and salt service that is so much abused in your dealers' stores. Ammonia refrigeration, which is an old and proven idea, is put to a new use in the soda fountain.

This required refrigerating engineers who were familiar with the needs of the industry, the ice cream man-

ufacturers and who had a soda fountain manufacture who was willing to adopt principles which had merit and were adaptable to the industry. This has required time and a great deal of experimental work, before every operation was fool-proof and automatic.

A practical demonstration of durability and efficient operation was then necessary to prove to the men interested in the ice cream and soda fountain industries, that the claims we had made were sound. We have proved these principles by some thirty successful installations here in Chicago. These foundations will stand your most rigid inspection. Upon investigation you will be pleased to note the ideal condition of the ice cream, soda, and city water, crushed fruits and syrups, as well as the spirit that is shown by the dealer, which means the future success of the industry.

* An address before Illinois State Convention. Watch for his complete paper in an early issue.

Another interesting discussion on this subject will follow in an early issue.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

ICE CREAM MAKING SHORT COURSE AT CONNECTICUT AGRICULTURAL COLLEGE.

The annual short course in ice cream making at the Connecticut Agricultural College, will be held from February 25 to March 7, 1924. The course is planned for men with some practical experience in milk plants and ice cream plants, who desire a better understanding of the more technical problems involved in the handling of milk products and their manufacture into ice cream. Many a plant manager, foreman or worker would do better and get more joy out of his work if he understood WHY he did certain things. It would be a paying investment for every dairy plant owner to send one or more of his men to the college for the ice cream making course.

Method and Facilities of Instruction.
The course will include lectures, round table discussions and practical work in the dairy manufacturing laboratories. The following are some of the topics that will be considered:

- Lecture Topics.**
- 1. Sources of supply, selection and care of milk products used for ice cream.
 - 2. Fruits, flavoring extracts, sweeteners, stabilizers and their use in ice cream.
 - 3. Testing ice cream and milk products for butterfat, total solids and sanitary quality.
 - 4. Standardizing and figuring the ice cream mix.
 - 5. Mixing, pasteurizing and homogenizing the ice cream mix.
 - 6. Fundamentals of freezing ice cream.
 - 7. Factors influencing quality, yield and cost of the finished product.
 - 8. Causes, prevention and remedy of ice cream defects.
 - 9. Manufacture of brick ice cream, special creams and fancy molds.
 - 10. Ice cream plant construction and selection of equipment.
 - 11. Mechanical refrigeration as applied to the ice cream industry.
 - 12. Marketing and delivery problems.

- Round Table Discussion Topics.**
- 1. How to get an adequate supply of good quality milk products the year round.
 - 2. What is a suitable ice cream standard?
 - 3. Practical means of controlling bacteria in ice cream.
 - 4. Brine volume, temperature and pressure.
 - 5. Homogenizing temperatures and pressures.
 - 6. What is a fair overrun and how to get it?
 - 7. Brick or packaged ice cream versus bulk ice cream.
 - 8. Why and how to advertise ice cream.
 - 9. Delivery and service problems.
 - 10. How to increase winter sales.

- Laboratory Practice Topics.**
- 1. Testing ice cream, milk, cream and condensed milk for fat, serum solids and total solids.
 - 2. Calculating and standardizing the ice cream mix.
 - 3. Mixing, pasteurizing and homogenizing the ice cream mix.
 - 4. Study and operation of the freezing process.
 - 5. Effect of different percentages of fat, serum solids and total solids on quality and cost of ice cream.
 - 6. Comparison of homogenized, emulsified and plain cream for ice cream making.
 - 7. Additional practice in standardizing, processing and freezing and a study of effect of binders, improvers and age of mix on yield and quality of ice cream.
 - 8. Further practice in standardizing, processing and freezing, using different ingredients, such as butter to supply fat; milk powders, plain and sweetened condensed milk to supply additional serum solids and study the effect of each on quality, yield and cost of ice cream.
 - 9. Making different kinds of frozen products and fancy molded ice creams.
 - 10. Study of ammonia refrigerating plant.
 - 11. Ice cream scoring or measuring ice cream quality.
 - 12. A study trip of representative ice cream plants in nearby cities.

The Dairy Manufacturing Laboratories:

- A. The testing laboratory is equipped for testing milk for cream and other dairy products for butterfat, total solids, bacteria, keeping quality, etc.
- B. The market milk department is equipped to weigh, clarify, pasteurize, cool and bottle the milk, wash and sterilize the equipment.
- C. The ice cream department contains mixing and pasteurizing vats, homogenizing and emulsifying equipment, horizontal brine freezer, ice cream hardening room, Mojonnier Tester and other smaller equipment.
- D. There is also a 10 ton compression refrigeration system for the making of ice, the freezing of ice cream, cooling of milk, cream and mix, maintaining two cold storage rooms at 35 degrees F., and the ice cream hardening room around zero.

Admission: There are no entrance requirements except that the student shall be eighteen years of age and all have had one summer or more experience in an ice cream or milk plant.

Tuition Fees and Expenses: There is no tuition fee in connection with the course, except that each student is required to pay to the treasurer \$10, which covers registration, room and incidental fees. Students will be provided white suits for laboratory work and may wish to purchase one or more text books. Board may be obtained at the college dining hall at approximately \$7.00 per week.

How to reach the College: The college is located at Storrs, in the town of Mansfield, about 8 miles from Williamantic. It is best reached by coming to Williamantic by train. A bus from Storrs meets practically every train.

For further information write to Director of Short Courses, or Professor R. C. Fisher, Dairy Department, Connecticut Agricultural College, Storrs, Conn.

Co-operation Stressed at Mississippi Convention

(Continued from page 98)

tions was that of educating the dealer on the subject of handling the ice cream or the way he packed it for delivery to the public. He specially mentioned the filling of cones.

"Some dealers," he said, "do not understand how to dip ice cream and place it in the cone in a way that will net a profit on a gallon of the product. Tightly packed ice cream," he said, "was not as palatable as if placed in the cone as it should be. This also applied to larger packages that were sent out to the homes," he pointed out.

Mr. McWilliams strongly advocated an educational campaign to bring out the comparative food value of ice cream and other food products. He mentioned the value of having school children visit the plant and write essays on a competitive prize basis.

"Everyday Problems" was the subject of an address by D. S. Cox of Columbus, Miss.

"Winter Ice Cream Business" was discussed by W. D. Seale of Jackson, Miss. "The same general business plans for winter selling as used in the summer produce very satisfactory results," he said. He recommended specialties as one way in which to keep the public interested. "One of the principal reasons people don't eat ice cream is because they don't think about it," he said, "and I find that specialties furnish a means of producing sales when the demand for ice cream in the ordinary form does not have the hot weather appeal." The speaker emphasized the value of continuing through the winter the same intensive advertising as used in the hot weather months.

A discussion followed Mr. Seale's address, in which a number of the manufacturers and supply men participated. Harry A. Benners brought out the matter of inferior service, soda fountains and ice cream parlors. He urged that this be one of the matters given attention by the manufacturers—educating the fountain and ice cream parlor dealers how to serve ice cream so that the public will appreciate it and return again.

J. G. Moore emphasized the importance of bringing out the value of milk products to health. "The public should know more of the basic food value of milk products," he said. "The three things essential to life are health, wealth and happiness, and neither wealth or happiness can be had without health."

Dr. C. M. Ship of the Mississippi state board of Health, gave an excellent talk on the work of his department in connection with the manufacture of ice cream in the state. He highly complimented the members of the association on the condition of their plants

Dr. Ship went into considerable detail to explain the effect of bacteria on the mix. His talk was of a technical nature and as he spoke extemporaneously it is impossible to quote to any degree of fullness. However it is putting it very mildly to say that his audience appreciated the talk and gained much helpful and interesting information from it.

Paul Cromer, an official of the state agricultural department, followed Dr. Ship, and gave the convention a most interesting account of his work. Later in the convention he was voted the full co-operation and support of the association.

The afternoon session of the first day closed with an address by J. W. Clopton, secretary of the Southern association.

Tuesday Evening Banquet.

One of the features of the wonderful manner in which N. C. Pearson had arranged to entertain the visitors to Laurel on this occasion, was the co-operation accorded him by the chamber of commerce and the business men of the city. The Tuesday evening banquet was arranged and all expenses taken care of by the chamber of commerce. It was a most enjoyable affair. Music was furnished by the Villien orchestra, which is composed of some of the best musical talent of the city. A solo was rendered by Mrs. Porteous, which was a much appreciated feature of the evening entertainment.

It is also true that there was other music, led by various and sundry, unrenowned musical artists. However, whatever was lacking in harmony and volume was overshadowed by the appreciation of the real motive

Wednesday Morning Session.

Wednesday's program was opened by a highly interesting and instructive paper by Paul Cromer. Mr. Cromer went into considerable detail and into an extended discussion of the "Advantages of Standardizing Ice Cream."

Following Mr. Cromer's address a general discussion ensued, which developed a number of subjects of immediate interest to the manufacturers. Among those who entered into the discussion were: C. H. Kent, Harry Benners, J. G. Moore, D. S. Cox, W. D. Seale, President Sutton, Secretary Brookshire, N. C. Pearson, J. F. Ford, A. K. Weaver and others.

"Work of Trade Journals as Applied to the Ice Cream Industry" was discussed by Craddock Goins of The Ice Cream Review, the paper being read before

IF YOU KEEP UP WITH OUR ADVERTISERS, YOU KEEP UP WITH PROGRESS.

the convention by the secretary. A representative of another publication discussed the same subject.

J. W. Mulligan, who was on the program for a talk on "Mutual Service Between Manufacturer and Supply Man," was unable to be present, but sent in a very interesting paper which was read by Secretary Brookshire.

The Wednesday forenoon program closed with short talks by "Our Boys of the Grip." Every supplyman present spoke and many highly interesting matters were discussed.

Final Convention Session.

Immediately after calling the convention to order Wednesday afternoon a paper by B. J. Anderson, Grenada, Miss., who was unable to be present, was read. Mr. Anderson's subject was "Why Ice Cream is a Recognized Food."

The resolutions committee made a report thanking N. C. Pearson, the Laurel Chamber of Commerce, the Pinehurst Hotel and the other broad-minded business men of Laurel for the excellent entertainment, the mayor of Laurel for his hearty welcome to the city.

A resolution of sympathy to the family of Ed Berdon, who recently lost his life in an accident was adopted and the secretary of the association instructed to forward a copy of the resolution to the bereaved family.

A resolution highly complimenting the retiring officials for their faithful service was adopted by a rousing, cheering vote.

To incoming officers were pledged the full support of the association and the supplymen commended for the part they have done to make the association a success and for their contributions toward the entertainment.

The committee appointed at the last convention at Jackson, to prepare and submit a constitution and by-laws reported and the report was adopted.

Upon motion of H. F. McWilliams the officers of the association were made a special legislative committee.

A motion was made and adopted that the association

go on record as squarely back of Paul Cromer in his work with the State Agricultural Department. He was given the full support of the association, in his efforts to secure an appropriation sufficient to continue the very necessary work.

The election of officers was next in order. The result is given in the beginning of this story.

The selection of the next convention city, as usual brought out considerable good-natured discussion. Vicksburg, Brookhaven, Jackson and Meridian were placed in nomination. Vicksburg won by a safe majority.

* * *

Among the supplymen to address the convention were K. M. Dingwall of Bessire & Co., Atlanta; Fred E. Robinson, United Chemical & Organic Products Co. Byron Morris, Creamery Package Manufacturing Co. J. G. Moore, The Pfaudler Co.; F. W. Hooton, Meyer Dairy Equipment Co.; P. N. Miller, Crown Fruit & Extract Co., and Harry A. Benners, Southern Selling Service.

* * *

District Meetings.

It was decided to hold district meetings throughout the state this year. The first will be held in northern Mississippi in the near future. The next state convention will be held at Vicksburg, home of Convention President Sutton.

* * *

Constitution and by-laws were drafted and adopted at the convention, calling for an executive committee composed of five men, with one director to be elected each year.

* * *

The annual banquet at the Hotel Pinehurst was very enjoyable affair. Aside from a good meal, excellent music was furnished by the Laurel concert band.

* * *

Excerpts from speeches before the Mississippi convention will be published in the March issue.

Minnesota Manufacturers Hold Timely Convention

Synopsis of Thirteenth Annual Convention at St. Paul, January 10 and 11
Dunn is Re-elected President

THE thirteenth annual convention of the Minnesota State Association of Ice Cream Manufacturers, which was held in Saint Paul on January 10 and 11, insofar as attendance and instructive addresses are concerned, was a success.

It was the first time in the history of the association that a two-day convention was held. The forenoon of each day was set aside for manufacturers and supplymen to visit and become better acquainted with the problems that they usually have to solve in the course of a year's business. The success of this convention cannot be credited entirely to the officers because manufacturers and supplymen co-operated in every possible way to make the annual meeting a success.

The convention was called to order by the President, W. W. Dunn, Jr., of Saint Paul. After listening to the splendid address of Mayor Nelson of Saint Paul, the response was ably presented by C. E. Kester of Hutchinson, Minn. The president's address was full of timely suggestions. He pointed out the need of such an organization and impressed upon those present the need of a strong trade association.

After the president's address, the secretary's and treasurer's report were read and adopted.

The members present were all set for the address which was to be delivered by M. D. Munn, president of the National Dairy Council of Chicago, and when it was announced that he was unable to be present disappointment was noted upon faces in the audience, but when the lady was presented by the president who was to take Mr. Munn's place on the program had entered in upon her subject, it was quite evident by the audience that there was no disappointment in store for them. The National Dairy Council was represented by Miss Louise Fitzgerald. Miss Fitzgerald in her discourse as to the activities of the National Dairy Council was so interesting to the audience that when she had finished a rising vote of thanks was tendered her, and the chair made the statement that in his opinion the members present could consider themselves fortunate in being present to hear Miss Fitzgerald's address on the value of dairy products and in particular the value of ice cream as a food.

The next number on the program was to be an address by W. A. Schwindler, former president of the Illinois state association, but unfortunately it was impossible for him to be present. Thereupon, the president called upon A. D. Sibbald, assistant dairy and food commissioner, who addressed the association on subjects pertaining to the ice cream industry. The president also called upon our old friend, former state dairy and food commissioner of Minnesota, E. K. Slater of Milwaukee, editor of the Butter, Cheese & Egg Journal, The Ice Cream Review and The Milk Dealer, who addressed the convention on the needs of the industry. It is needless to say that Mr. Slater's address was well received by his old friends and associates.

The next order of business was a detailed report on legislation and standards affecting the ice cream industry by Secretary J. J. Farrell.

After the report of Mr. Farrell, the session went into general discussion of problems of interest to the manufacturers.

Mr. Crowell of Iowa gave the manufacturers an interesting talk on the cost of producing ice cream. Be-

fore the close of this session, Riley Thomson of Albert Lea, Minn., discussed the cost of production and delivery of ice cream in his section of the state.

The evening entertainment was participated in by two hundred manufacturers, supplymen and guests. The banquet and entertainment was a very enjoyable affair. Dancing took place after the entertainment. It is needless to state that the dancing program was participated in by all. The officers especially appreciated the ability of the ladies to entertain the guests who attended the banquet and dance.

Friday forenoon was occupied with a sectional meeting of the northern and southern ice cream manufacturers. At two o'clock the convention was called to order by the president. The first address was by Richard Schwart of the Ives Ice Cream Co., on "Scientific Control in the Manufacture of Ice Cream." Mr. Schwart's paper treated the subject from a technical viewpoint and proved to be of great interest to manufacturers, and they participated in an interesting discussion of the subject.

The next address was by the well-known author and humorist, Douglas Malloch of Chicago. Mr. Malloch's address was interesting from many viewpoints, as it brought home valuable lessons to men who are engaged in the manufacture of ice cream. For that matter it pointed out the value in a humorous way of the service that trade organizations render to one another, as well as to the public. All who heard Mr. Malloch expressed themselves as being well paid for attending the convention if there was nothing else of interest to them.

New Officers.

After Mr. Malloch's address the convention went into executive session. Report of committees and election of officers. Officers elected for the ensuing year are as follows:

President—W. W. Dunn, Jr., Saint Paul, Minn.
Vice-President—C. E. Kester, Hutchinson, Minn.
Treasurer—Nels Baden, Wadena, Minn.
Secretary—J. J. Farrell, Saint Paul, Minn.

Directors.

W. W. Dunn, Jr., St. Paul, Minn.; Riley Thomson, Albert Lea, Minn.; D. T. Carlson, Willmar, Minn.; Chas. Kiewel, Crookston, Minn.; Ralph Nelson, Hibbing, Minn.; C. E. Kester, Hutchinson, Minn.; Nels Baden, Wadena, Minn.

Gophers Organized.

While the convention was in executive session the supplymen organized as an association. They will be known henceforth as the "Minnesota Gophers." The president of the Minnesota Gophers is C. A. Gould of the Gould Products Company, Minneapolis, Minn.; vice-president, R. N. Palm of the Creamery Package Co., Minneapolis, Minn.; secretary, H. E. Stinchfield of the Gould Products Company, Minneapolis, Minn.; treasurer, N. M. Booth, Minneapolis, Minn.

Forty-eight supplymen signed the roll as charter members of the Minnesota Gophers. On completion of the supplymen's organization they entertained the ice cream manufacturers at a supper and smoker in the Palm Room of the Saint Paul Hotel. Those of us who have been in the dairy field all our lives were not surprised at the entertainment put on by the supplymen to

Mr. Ice Cream Manufacturer

Your Absolute Security

is

Pleased Customers

Do you realize the *daily irritation* of your customers when they see in their own stores the mess made that is practically inseparable from loading the ordinary cabinet?

A small irritation constantly repeated often results in a lost customer.

You can get your customers to feel and talk like these if you couple DRY-ZERO CABINETS with *your* Ice Cream:—

— STATEMENTS OF USERS —

J. WHITTINGTON,

6132 Pasadena Ave., Los Angeles, Calif.

"I should say they are good. Keep the ice cream in good condition for forty-eight hours on one packing. I would positively insist on that kind of cabinet, no matter what kind of ice cream. The other cabinets you have to pack three holes, in the Dry-Zero you pack only one. Eliminate a lot of mess, and only take a bucket of ice per day for a 2 hole 5. Sometimes less than that. Like the Dry-Zero because it is handier and easier to handle the ice cream. Wouldn't go back to any company that can't supply me with Dry-Zero ice cream cabinets."

H. I. BENNETT,

627 Chestnut Avenue,
Los Angeles, Cal.

"Certainly is a dandy cabinet all right. It's a pleasure to handle ice cream since we got this cabinet. Had just the opposite kind of a time before. Handled _____ cabinets. Cream was just like mush all the time. _____ ice cream was all right, but it was the cabinet. Couldn't get my money out of the ice cream before."

And scores of others of a similar nature.

Yet on top of achieving this, your DRY-ZERO CABINETS will cut your delivery costs by an amount equal to the cost of your cabinets, each year of service.

This is not merely "advertising talk"—it is cold fact—and we proved it at the Cleveland and other conventions, as well as daily in nearly every State in the Union. And we'll let you prove it for yourself.

Please your customers and save your delivery costs.

Let us ship you a Dry-Zero Universal cabinet, subject to your approval after test is made in your plant.

Carolina Manufacturers Discuss Industry's Development

Sixth Annual Convention Well Attended at Winston-Salem
January 15 and 16. Obenshain is President

ONE of North Carolina's best ice cream conventions ended with the election of W. H. Obenshain of the Chapin-Sacks Ice Cream Corporation, Charlotte, N. C., as president of the North Carolina Ice Cream Manufacturers' Association. The annual convention was held in Winston-Salem January 15 and 16.

Past development of the industry and means of future expansion featured the program.

Other officers elected were E. L. White, Wilmington, vice-president, and A. E. Dixon, Fayetteville, secretary.

The committee chairmen elected to serve during 1924 were: Legislative, George L. H. White, Raleigh; code of ethics, E. L. White, Wilmington; resolutions, Earl Wilson, Gastonia; entertainment, W. S. Obenshain, Charlotte; membership, A. E. Dixon, Fayetteville.

The attendance was the best in the history of the association, and the convention was featured by several interesting addresses dealing with various phases of the ice cream industry. A barbecue at Cliffside Lake, near Winston-Salem, was one of the most interesting entertainment features of the convention.

Charles E. Landreth of Winston-Salem, retiring president of the association, presided. The address of welcome was delivered by H. R. Dwire, editor of the Winston-Salem Sentinel, and the response was made by George L. H. White of Raleigh.

Mr. White also dwelt upon the value of co-operation between members of the association and the state department of agriculture. He referred with pride to the fact that members of the association are doing their best to live up to the regulations of the department, and that as a result the number of samples of ice cream found to be under standard last year was very small.

The secretary's report showed that 3,266 children, inmates of North Carolina orphanages, were supplied with 200 gallons of ice cream on Thanksgiving Day, and it was urged that the distribution of free ice cream on that day be increased.

"The Growth of the Dairy Industry in North Carolina," discussed by W. J. Shuford of Hickory, proved interesting to every member of the association. Mr. Shuford said the first creamery established in the Tar Heel State was at Mooresboro in 1910 and that year the production of butter was about 1,000 pounds. Ice cream manufacturers last year alone used 500,000 pounds of butter, Mr. Shuford showed, while the value of dairy products in the state was \$14,912,000. The average value per milk cow was \$310, and it was estimated that the receipts from the sale of the products were \$6,000,000.

Dr. James H. Heald, director of the food inspection division of the Winston-Salem department of health, urged the strict application of the North Carolina ice cream pasteurization law.

Thomas C. Reed of Greensboro, discussed "Raw Material Production," citing instances where people less favored by climatic and soil conditions have made a success of dairying, and he urged that as far as possible home products be used by the manufacturers. The secretary read the address of H. P. Olsen, president of The Ice Cream Review, on "Increasing Consumption."

Other speakers were J. G. Moore, Rochester, N. Y., who discussed "Dairying Possibilities in the South"; J. A. Arey, state dairyman, who spoke on "Progress Made in Dairying Development in North Carolina During the Past Ten Years," and I. J. Moore of Detroit,

Mich., discussed the subject of "Promoting Winter Sales."

This convention will be further discussed in the March issue of The Ice Cream Review.

MINNESOTA MANUFACTURERS HOLD TIMELY CONVENTION.

(Continued from page 136)

entertain the manufacturers. The eating was surely bountiful spread, and the smokes and entertainments were enjoyed by all present. It would be useless to elaborate upon the entertainment put on by the suppliers as all those who know the ice cream suppliers know that they are wonderful entertainers. The entertainment continued throughout the evening until 10:30, when the thirteenth annual convention of the Minnesota ice cream manufacturers came to a close. From the remarks that were expressed by manufacturers and all who attended the convention and entertainment it was evident that the next year's convention would surpass the present one and that two days would be altogether too short for sessions and entertainment such as were witnessed at this convention.

Minnesota is at last on the map insofar as progressive tactics in organization are concerned. Our 1924 convention, held at the St. Paul Hotel on Jan. 10 and 11, was successful beyond my most hopeful anticipation from both a standpoint of attendance and spirit of cordiality shown by the members toward each other. Much credit for the success of the meeting is due to the unstinted efforts of the newly organized Minnesota Groupers, suppliers, forty-eight in number, who provided a cafeteria supper and brilliant entertainment for the members of the state association during the second evening of the convention, and, while thanking the wholeheartedly for their efforts in behalf of the association, I can assure them that those efforts will react to their benefit many fold in the future.

Very truly yours,

W. W. DUNN, JR., President

FRED MASON IS PRESIDENT OF THE FRANKLIN SUGAR REFINING COMPANY.

Fred Mason, formerly of St. Paul, has been named president of the Franklin Sugar Refining Company, Philadelphia, a subsidiary of the American Sugar Refining Company, it was announced recently. As president of this subsidiary he will have charge of the entire sales force of the American Sugar Refining Company and all its branches.

Mr. Mason at one time was secretary of the St. Paul Retail Grocers' Association. From that organization he went to the Minnesota State Retail Grocers' Association as secretary and later became secretary of the National Retail Grocers' Association.

Some time later he became associated with the sales department of the Diamond Match Company, which he left to become general manager and later president of the Shredded Wheat Company. Two years ago last August he became associated with the American Sugar Refining Company as vice-president and member of the board of directors. He retains this position.

Lipman Automatic Ice Cream Cabinet

This remarkably efficient cabinet, designed especially for the ice cream trade, entirely does away with ice and salt packing—is not only far more efficient and more convenient than the old method, but is also far more economical.

It comprises a Lipman full-automatic refrigerating machine and an exceptionally fine cabinet, built as a single unit. The refrigerating machine requires no attention except occasional oiling, and automatically maintains any desired temperature. Cabinet is insulated with pure cork board—the best material for this purpose.

Every machine and cabinet is completely tested at the factory. Write for complete details.

Lipman Refrigeration Co.
Dept. H. H. BELOIT, WIS.
★ 65 Sales and Service Stations in the United States ★

Note compactness of cabinet and easy accessibility of machine. Made in two sizes—6 and 8-hole cabinets. Furnished either with plain or polished top and covers, as desired. Can lifters included.

Lipman
FULL-AUTOMATIC REFRIGERATING MACHINES

WESTERN CANADA DAIRY WEEK NEAR.

(Continued from page 16)

...a handsome silver shield, with other suitable awards as second and third prizes. This competition will be open to any ice cream maker in Manitoba, Saskatchewan, Alberta or British Columbia, and will be held in connection with the western Canada dairy convention to take place in Moose Jaw, February 5,6,7,8, 1924."

A large attendance is expected, not only from the western provinces of Canada, but also from the north-eastern and mountain states of America. American ice cream manufacturers of the Pacific coast and nearby states were guests of the Canadians when the Pacific Ice Cream Manufacturers' Association held its annual convention at Vancouver in December.

Canadian ice cream manufacturers have invited their American friends to come back and take part in the deliberations over their problems.

A young school girl of the middle West had visited New York, and on her return home was asked if she had seen the Statue of Liberty. She thought the matter over for a few minutes and then said, "Oh, you mean the woman holding the ice cream cone in her hand."

* * *

SOUTH DAKOTA ICE CREAM MANUFACTURERS MEET AT WATERTOWN FEBRUARY 19, 20 AND 21.

HALF MILLION DOLLAR COMPANY FORMED AT CINCINNATI.

Nearly fifteen milk concerns of Cincinnati, Ohio, have syndicated and have filed articles of incorporation for organizing a \$500,000 ice cream company. Milton A. Mailender, general manager of the Cincinnati Milk Exchange is head of the syndicate. Ice cream will be manufactured in the Lackman Brewing Co.'s plant on West Sixth Street and Carlisle Avenue. The several buildings of the brewing company will be used, embracing about 125,000 square feet of floor space.

A modern refrigerating plant was erected and equipped at considerable cost by the brewing company before prohibition.

According to Mr. Mailender, the new concern will consume all the surplus supply of independent milk producers of Hamilton County, as well as surrounding counties.

"Our equipment will be modern in every detail, including a fleet of ten motor trucks of large tonnage capacity, with refrigerator bodies. We expect to have our plant ready for operation by March 1," said Mr. Mailender.

CALIFORNIA PLANTS COMPLETED.

The Vogue Ice Cream Co. has completed its creamery plant at Tracy, and its ice cream plant at San Francisco. The Tracy plant passed the United States government 97.6 per cent inspection. With the plant at Tracy producing raw material, the ice cream plant at San Francisco is assured of a supply at all times, officials say.

California Manufacturers to Take Part in Pacific Dairy Show

All Ice Cream Organizations on Coast May Follow Lead Taken by California and Southwestern States' Association at Catalina Island
January 12—Dairy Council Endorsed

INDICATIONS are that ice cream associations representing the entire Pacific Slope, and one national organization of the ice cream industry, will meet this year at the Pacific Slope Dairy Show.

The California and Southwestern States Ice Cream Manufacturers' Association definitely decided at its meeting on Catalina Island January 12 to meet with the Pacific Slope Dairy Show. This organization also addressed an invitation to the Pacific Ice Cream Manufacturers' Association, representing the northwestern states, asking it to meet with the Pacific Slope Dairy Show.

President W. V. S. Robb of the northern association, attended from his home in Seattle, and while he did not commit himself definitely, stated he felt his organization would accept the invitation. It also was decided to invite The Association of Ice Cream Supply Men to hold their annual convention at the Pacific Slope Dairy Show.

This brings into the show's activities three conventions which were not held at the 1923 show in Oakland.

It is probable that the 1924 show will fall about the middle of November, though the date has not yet been definitely determined.

Invitation to participate in the show was extended to the ice cream men at their meeting at Catalina by President C. L. Roadhouse and Secretary-Treasurer Sam I. Green.

The ice cream men also adopted resolutions endorsing the work of the California Dairy Council and urging their membership actively to support the dairy council.

Officers and directors were elected as follows:

President, F. H. Adams of San Francisco; vice-president, Harry Peacock of Bakersfield; secretary-treasurer, Jay Kugler of San Francisco; directors, C. J. Alfred of Los Angeles; John W. Alsap of Phoenix; L. J. Christopher of Los Angeles; E. W. Chism of Reno; W. A. Hosking of Sacramento; Geo. H. Hall of Fresno; C. T. Plaut of Oakland; K. L. Carver of Los Angeles; Wayne A. Hood of San Diego; and the officers already named.

Metropolitan Manufacturers Meet

Important Trade Topics Discussed by Manufacturers of Gotham and Neighboring Jersey Cities

By W. H. LIST*

THE Metropolitan Ice Cream Manufacturers' Association (comprising the ice cream manufacturers and allied industries within seventy-five miles of New York City) held its first annual convention at the Newark Athletic Club, Newark, N. J., on December 11, 1923.

The subjects under discussion were as follows: "Mechanical Refrigerated Cabinets," "Better Food Value in Ice Cream," "Increased Butterfat Standard," "Soda Fountains—Better Insulation."

The discussion of Iceless Refrigeration vs. Ice and Salt Refrigeration was opened by President Van Cleef.

Walter Castles, Castles' Ice Cream Co., William Sutton and R. V. Jones, Reid Ice Cream Co., Joseph E. Wiedenmayer and Frank J. Noll, Puritan Ice Cream Co., discussed both methods from a standpoint of relative costs and it was the consensus of opinion that the Ice and Salt method was less expensive on account of the heavy installation and financing costs.

The following items were considered.

ICELESS METHOD.

Two-thirds of Group "A" Expenses
(Saving One-Third of Trucks.)

Ice Costs:

(Icing cream on trucks).
Ice Costs.
Dept. of Mach. 10 years (Reduced 68%.)
Dept. of Bldgs., 40 years (Reduced 67%.)
Taxes on Mach.
Insurance on Mach. and Bldgs., (Reduced 67%.)

*Secretary, Metropolitan Ice Cream Manufacturers' Association.

6% interest on ice mach., (Reduced as above.)
6% interest on ice bldgs., (Reduced as above.)
Salt for trucks about 13%.
Commissions cut from 10c to 8c.

Cabinet Expense:

Current12 3/5 per day
Water03 2/5 per day

Total16 per day
\$35 per year upkeep.

6% interest on investment.

Cans.

Cabinets @ \$400.00
Installation 50.00
Water meters and installation 50.00

\$500.00

Depreciation Cans.
Insurance

(Fire, property damage and explosion.)
Taxes on 1/2 cost of cabinets @ 3 1/2 per cent.
Loss of present cabinets (7 year masis.)

ICE AND SALT METHOD.

Group "A"—Truck and Wagon Expense Includes the Following Accounts.

Truck Maintenance: Tire expense, garage expense, repair gasoline, oil and grease, electric charging, team hire and car age, horse feed, horse shoeing, stable expense, repairs (wagons, repairs on harness.

Salaries, Garage; gasoline, electric.

Insurance: Trucks, drivers.

Taxes; Trucks.

Depreciation: Trucks, 7 years; batteries, 3 years; wagon 5 years; horses, 10 years; harness, 5 years.

Six per cent Interest on Investment: Trucks, batteries, wagons, horses, harness, tires, garages.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

In figuring the cost of the iceless method of refrigeration, we have used two-thirds of the above items. This percentage is based on one-third less in truck and delivery equipment, which means that each route must serve 50 per cent more customers.

Ice Costs Include: Ice (for trucks), ice purchased and water, salaries and power cost, power, ice plant maintenance, insurance on buildings and machinery, taxes on machinery, dep. on buildings, 40 years, dep. on machinery, 10 years, 6 per cent interest on ice machinery, 6 per cent on ice buildings, salt.

Drivers Wages: Commissions, wages for specials.
Cabinet Expense: Maintenance, dep. (incl. tubs and cans), 6 per cent interest on investment.

Total Cost (including Group "A")

Plant "A".....\$0.327 per gallon
Plant "B".....\$0.44 per gallon

The subject, "Better Food Value in Ice Cream," was presented by Dr. Kimberly, Dairy Laboratories, New York City.

It was recommended that ice cream follow as nearly as possible the ideal food, which is milk, as regards its composition.

In order to demonstrate this idea, ice cream was made from concentrated straight whole milk and served during the discussion of this subject. The ice cream was made with 44 pounds of milk, 8 pounds of sugar and 14 ounces of gelatine. The milk tested 8.72 per cent butterfat and 31 per cent total solids; the finished ice cream tested 7.45 per cent butterfat, 41.17 per cent total solids and was made with 100 per cent overrun.

It was conceded during the discussion that ice cream containing a much less percentage of butterfat than now in general use would be the ideal ice cream from a food standpoint, it would also lessen the heating properties of ice cream in the summer time, due to the presence of butterfat.

V. M. Hovey, president of the National Association of Ice Cream Manufacturers, gave a talk on the possibility of an increased butterfat standard for New York State, and the consensus of opinion among manufacturers being the reverse of this, due to their desire to have ice cream taken entirely out of the competition of dessert class and put into the food class by having formulae follow the composition of milk, which is the ideal food, as nearly as possible.

The soda fountain subject was introduced by President Van Cleef, who called on representatives of soda fountain manufacturers as follows: Mr. Crosson, Liquid Carbonic Co., Newark; L. C. Gooden, Bishop Babcock Co., New York; E. H. Rockwell, Newark Soda Fountain Co.; L. A. Sangston, American Soda Fountain Co., New York; S. McLennan, Knight Vitreous Fountain, New York.

The old style "iceless" soda fountain using most of ice for other purposes than ice cream, because of the ice cream compartment not being properly insulated, was compared with the present style fountains, which are more insulated.

Following the meeting there was a banquet at which President Van Cleef presided. The speakers at the banquet were:

Morris Scheck, Scheck Advertising Agency, Newark, "Co-operation and Competition."

George Brink, Crane Ice Cream Co., Philadelphia, "The Value of Association."

O. S. Jordan, Brown & Shar, "Fellowship."

L. C. Gooden, the Bishop Babcock Co., extended the invitation of Mr. Reiss, ice cream manufacturer, to visit in London. This invitation was prompted by the courtesy shown and information given Mr. Reiss by our manufacturers when he was in this country.

ERIKSEN GOES WITH MILWAUKEE CONCERN.

Fred E. Eriksen, at one time connected with the Olsen Publishing Co., and later in the advertising business for himself in Milwaukee, is now associated with the Cramer-Kraselt Co., of this city.

"I was urged," writes Eriksen, by many of my dairy friends during the Exposition to resume my personal advertising service. I was seriously considering this. However, my previous experience had conclusively convinced me that I could produce more effective dairy advertising and serve a larger number of accounts by having a strong, sound, well-balanced advertising organization back of me."

"Just before I left Milwaukee for a temporary stay at Syracuse to assist 'Col.' Skinner on dairy show publicity, I had been approached by a member of the C-K Co. with the view of my becoming associated with this agency. Upon my return to Milwaukee the negotiations were resumed."

Fred will be in charge of the C-K dairy department. He will continue to specialize in dairy advertising, giving his personal and exclusive attention to dairy advertisers.

FRED E. ERIKSEN.

SHORT COURSE IN ICE CREAM MAKING AT UNIVERSITY OF CALIFORNIA.

The University of California offers for the second time, a Short Course for Ice Cream Makers, Feb. 4 to 14. The plan of the short courses as given by the dairy industry division, is to bring experienced men up to date, rather than to try and make ice cream makers out of the novices in a short length of time. It has been the university's experience that this type of short course is far more successful.

Most of the lectures and laboratories are given by the members of the staff. However, a number of commercial men are brought in to lead discussions upon various practical subjects.

Many new features are incorporated in the short course this year. Professor Titus of the University of California, has worked out a formula for figuring the ice cream mix, which will be taken up at this time. A certain amount of time is to be devoted to types of ice cream delivery equipment and their cost, which has heretofore not been touched upon by the university.

The ice cream short course is given concurrently with short courses in butter making, cheese making, and milk plant operating.

To Honor Founder of Association.

A special feature of the 1924 convention will be the banquet in honor of Mr. and Mrs. E. A. Stowe. Mr.

Michigan Dairy Boosters' Program

Monday, February 4th —

Dairy Boosters' Banquet and Election of Officers at 7:30 p. m., in Columbia Hotel, with good music.

Tuesday, February 5th —

Exhibition Hall opens at 12 o'clock (noon) and closes at 9 p. m. Orchestra from 7 to 9 p. m.

Wednesday, February 6th —

Exhibition Hall opens 8 a. m.; closes at 6 p. m. Orchestra 2:30 to 4:30 p. m., then to Masonic Temple for Michigan Allied Dairy Association Banquet at 6 p. m.

Thursday, February 7th —

Exhibition Hall opens 8 a. m., closes at 9 p. m. Orchestra 9 to 11 a. m.; 2:30 to 4:30 p. m.; 7 to 9 p. m. Smoker in hall 7 to 9 p. m., then to Masonic Temple for Dairy Boosters' Dance, 9 to 12 p. m. Orchestra also 9 to 12 p. m. They will dance in flood lights.

Friday, February 8th —

Exhibition Hall opens at 8 a. m., closes at 12 o'clock (noon). This is the end of the Convention.

Michigan Dairy Boosters' Headquarters —
The Park American Hotel.

Stowe was the founder of the Michigan Dairymen's Association. The banquet complimentary to him and Mrs. Stowe, will be given at 6:30 the evening of February 6.

In connection with the entertainment features, exhibition preparations, President C. J. Yunker has made the following announcement in behalf of the Michigan Dairy Boosters:

"I wish to call your attention to the Michigan Allied Dairy Association's coming convention and exposition, to be held at Kalamazoo, Mich., February 5, 6, 7 and 8, 1924, in the Armory building. There will be 94 spaces filled by exhibitors, consisting of some of the leading manufacturers of the country.

"They always put on fine exhibits in Michigan show. The association has arranged for a big affair. It will give a fine banquet on Wednesday night at 6 o'clock, at the Masonic Temple.

"The Michigan Dairy Boosters have made arrangements for good music every day and evening, and the big dance Thursday at 9 p. m. at Masonic Temple. They also will give some special features at the exhibition hall. They will also hold their 'smoker' Thursday, 7 to 9 p. m., in the exhibition hall. Everything will be held under one roof this time, so we can all have a good time together. Let us see you there!"

HIAWATHA UP TO DATE.

By the shores of Cuticura
By the sparkling Pluto Water,
Lived the Prophylactic Chiclet—
Danderine fair Buick's daughter,
She was loved by Instant Postum,
Son of Sunkrist and Victrola,
Heir apparent to the Mazda,
Of the tribe of Coca-Cola,
Through the Tanlac strolled the lovers,
Through the Mapleine Groves they wandered;
"Lovely little Wrigley Chiclet,"
Were the fairy words of Postum,
"No Pyrene can quench the fire,
Nor any Asperin still the heartache,
Oh! My Prestolite desire,
Let us marry, little Djer-Kiss."

DIXIE MAIL BAG

TEXAS FOOD DIRECTOR DENIES OPPOSING PASTEURIZATION.

Austin, Texas, Jan. 10, 1924.

Editor The Ice Cream Review:

The January number of your splendid journal is before me in all the beauty of its holiday dress, bearing the "New Years Greeting." This greeting from the official organ of the Texas Ice Cream Manufacturers' Association found immediate response, for the ice cream men, like the bottlers of sugar-sweetened carbonated beverages, have always been counted in the fore-front of those co-operating with the dairy and food commissioner in Texas.

Your beautiful cover design is but an appetizer for the feast of good things spread throughout the journal; Professor Baer's article in particular was digested with keen relish, his remarks on pasteurization savoring strongly of some delectable dessert.

But, did you ever partake of a sumptuous banquet, giving full justice to each epicurean delicacy, until you had feasted fairly to repletion, only to find someone carelessly, or maliciously, had mixed in a few rancid nuts with the last course? Such was my feeling when, having feasted upon the good things in your journal, I read among, "Side lights on Texas Convention," the absolutely, and unequivocally, false statement that I refuse to require pasteurization of ice cream mix.

The law-making power in Texas, as in other states, Oklahoma included, rests entirely with the legislature. A bill requiring pasteurization of ice cream mix was passed in the 37th legislature, sponsored most heartily by this division, but failed to pass for reasons perhaps not known to the ice cream manufacturers themselves. Again, during the last, the 38th legislature, it was proposed that the same, or a similar bill be presented, and I expressed myself in hearty accord with the idea of pasteurization of ice cream mix, but the authors of the bill did not present it for consideration.

It was a great disappointment to me not to be present at the Galveston meeting and endeavor to express in person my appreciation of the splendid co-operation of work has always had at the hands of the Texas ice cream manufacturers. It is a painful surprise to find that I was so grossly misquoted and my well known views on pasteurization absolutely misrepresented in my absence.

I am pleased to note that I am to debate with Professor Baer of Oklahoma, before the next meeting of the Texas association. I only wish it were before the meeting of your National association since with such an able colleague I could easily make our opponents feel they had met a "battle" indeed.

The idea! W. W. Battle, director of the food and drug division in Texas, "refuses to require pasteurization of ice cream," "doesn't believe in pasteurization." Editor, someone carelessly, or maliciously, mixed these rancid nuts in the last course of your otherwise wonderfully enjoyable feast.

May the milk of human kindness, for the ice cream manufacturers, be always so scientifically pasteurized so never sour.

Yours very truly,

W. W. BATTLE, Director,

Food and Drug Division, Texas State Board of Health.

Hamburg, Ark.—Alex Britten has sold the Hamburg Ice Cream Co. to W. L. Wosencraft, L. J. Pence and Ed. Twesty.

Chico, Cal.—M. Fitch, local manager of the Peerless Ice Cream Co., says that the branch here will resume business on a larger scale than before about the middle of February, and they will manufacture ice cream instead of having it sent from Sacramento as before.

Los Angeles, Cal.—Much ice cream was received at the twenty-two orphanages during the holiday season, the gift of eight ice cream companies.

Newman, Cal.—E. L. Dilley has been appointed manager of the Miller Ice Cream Co.

Wilmington, Cal.—Certified articles of incorporation of the Benham Ice Cream Co. have been filed with the register of deeds.

Chicago, Ill.—E. V. Vanstone Co., 110 South Dearborn St., ice cream business, has just been incorporated with a capital of \$20,000. Richard Welch, Beatrice Nyrant and Edgar Barnett, incorporators.

Algona, Ia.—The latest addition to the Algona Ice Cream & Candy factory is an "Eskimo Pie" machine.

Forest City, Ia.—F. R. Ballantyne, proprietor of the Forest City ice cream factory, sold his factory to the Hutchinson Ice Cream Company, of which firm he will be district manager.

Gate City, Keokuk, Ia.—The Keokuk Ice Cream Co. have installed in Warnecke's Drug Store an automatic electric ice cream cabinet. This machine keeps the ice cream at an even temperature always.

Mason City, Ia.—The E. B. Higley Company is building a branch factory at Iowa Falls. W. S. Wilcox is general manager of the plant.

Maquoketa, Ia.—Dale Eastman recently purchased the ice business of Edward Kirchoff, and will hereafter manufacture butter and ice cream. A fine new ice house has been erected at Lakehurst.

Villisca, Ia.—Tyler Bros. are building an addition to their butter and ice cream factory. The latter business has increased very rapidly even during the last winter, and with the added facilities for making this product they will take it up on a much larger scale than before.

Baltimore, Md.—The Superior Ice Cream Co. has acquired buildings on North Ave. and Gay St. which will improve their ice cream plant.

Grafton, Md.—The Imperial Ice Cream Co. is making arrangements to erect a new building for their business here, which will cost about \$40,000. The building will probably be a two-storied one of concrete block, and it is hoped to finish it by May 1, when the company's lease of its present building expires.

Detroit, Mich.—H. A. McDonald will be general sales manager of the Arctic Ice Cream Co.

Saginaw, Mich.—The ice cream business of the Parker Dairy Co. was on Jan. 1, taken over by the M. & B. Ice Cream Co., the Parker Dairy Co. to supply cream.

Laurel, Miss.—The annual convention of the ice cream manufacturers was held here on January 8 and 9.

St. Louis, Mo.—Carpenter Ice Cream Co., 4047 Cote Brillante Ave., capital \$200,000, incorporated by William A. Schwindeler, J. W. Seller and others.

St. Louis, Mo.—Arrow Ice Cream and Dairy Co., increased capital from \$10,000 to \$25,000.

Sedalia, Mo.—The Weber Ice Cream Co., began business last month in its new quarters at Sixth St. and Ohio Ave.

Norwich, N. Y.—The Norwich Ice Cream Co. plant has been sold to Robert D. Fuller and Francis Oates for \$19,500. They took possession last month.

Durham, N. C.—The Durham Ice Cream Co. have let a contract to a local firm to erect an ice cream plant at West Main and Duke Sts.

High Point, N. C.—Fire of unknown origin destroyed the plant of the Allen Ice Cream Co., at a loss of \$2,000.

Shelby, N. C.—Honey Boy Ice Cream Co. will install an ice cream plant in their building at Gastonia, N. C.

Winston-Salem, N. C.—The ice cream manufacturers of the state will hold their annual convention here on Jan. 15 and 16 for the North Carolina Ice Cream Manufacturers. During the last year the production of ice cream increased rapidly in this state.

Cincinnati, O.—Articles of incorporation of the Niser Ice Cream Co., with an authorized capital stock of \$500,000, were approved by the secretary of state yesterday.

Cushing, Okla.—White Ice Cream Co. has acquired a site on which it will erect a new plant.

Columbia, Pa.—Harry P. Schreiner has just let the contract for the addition to his ice cream plant to Ward Moore, local contractor.

Hazleton, Pa.—The Smith and Clark Ice Cream Co. has purchased Linder Bros. building in Hazleton, which will be converted into a warehouse manufacturing plant for the company.

Norristown, Pa.—The warehouse of the Shannahan, F. & C. Ice Cream Co., was recently burned, causing 100 families to be routed from their homes.

Reading, Pa.—The ice cream plant of the Burdett Bros. was damaged by fire of unknown origin on January 7. Great suffering was experienced in putting out the fire owing to the extreme cold. Fortunately it was extinguished before the ammonia tanks stored in the building could explode.

Wilkes-Barre, Pa.—The Made Good Co. of Tamaqua has taken over all the plants and equipment of the non-existent M. & G. Ice Cream Co. Scranton, Allentown and Tamaqua men are interested in this corporation, as well as local men.

Greenville, S. C.—The Greenville Ice Cream Co. has contracted for a new building at the corner of Washington and Jones St., to cost about \$10,000.

Sioux Falls, South Dakota.—A most modern, completely equipped ice cream and candy plant is about to be completed at a cost of \$60,000 on the east side. On the first floor are offices, the display room and the freezing room. Plenty of light and ventilation are provided by the many windows. In the basement are a store room, repair shop, machine room, rest room, showers and a dressing room. There is space for further machinery as needed from time to time. Business of the new plant is to be strictly wholesale, and ice cream will be the leading activity.

South Tacoma, Wash.—Large ice-making machinery and a new addition will shortly improve the plant of the Perfect Ice Cream Co.

La Crosse, Wis.—Consolidation of the Schmitt Ice Cream and Butter Co. of Winona with the Tri-State Ice Cream Corporation of La Crosse has just been effected under the name of the Tri-State Ice Cream Corporation. The firm will do business in the states of Minnesota, Wisconsin and operating plants at Winona, La Crosse, Prairie du Chien and Camp Douglas. The paid-in capital is \$200,000.

La Crosse, Wis.—On January 3 the Schmitt Ice Cream and Butter Co. of Wisconsin was consolidated with the Tri-State Ice Cream Co. at La Crosse. The paid in capital is \$140,000.

Milwaukee, Wis.—William F. Luick, head of the Luk Ice Cream Co. was elected to the board of directors, National Bank of Commerce, on January 8. All other officers were re-elected.

Westby, Wis.—At the annual meeting of the directors of the Westby Co-operative Creamery the officers of the company were re-elected. A committee was formed to seek a suitable site on which to build an addition to the present plant which is considerably handicapped for sufficient room in which to conduct its rapidly increasing business.

The Morton Salt Co. exhibit at the convention of Ice Cream Manufacturers of Dairy Products. This photo was taken by the Review representative with a Brownie No. 3 Kodak. Morton Company's representation of eleven men will be found on page 30 of this issue.

Automatic Refrigeration

REFRIGO for the Ice Cream Cabinet

HIGH SPOTS

Fits any cabinet
Completely automatic
Capacity, equals 200 pounds ice per day
Operated by $\frac{1}{4}$ H. P. motor
Installed beside cabinet, or in basement
Ammonia; Sanitary; Economical
Saves 9 to 16 cents per gallon
Maintains uniform temperature
Eliminates salt and ice
Soon pays for itself
Patented leak-proof seal
Cost of operation nominal
An investment, not an expense

The Last Word

REFRIGO is the last word in the refrigeration of ice cream cabinets. It refrigerates as dependably as the large commercial ammonia machines, but is without their size or expense.

REFRIGO is the machine every ice cream manufacturer and dealer needs. It saves him big money.

SOUTHERN CONVENTION—NEW ORLEANS—NOVEMBER 14-15, 1924.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

INDIANA PLANT GROWS.

The Amboy Creamery Company, 901 West Third St., Marion, Indiana, with two branch plants, manufactures about 100,000 gallons of ice cream annually in their plant, 132x66 feet. Half of the building is two stories high. The factory is equipped with a fifteen ton York enclosed type compressor; three Tyson freezers; three 400-gallon and one 200-gallon

pasteurizers; viscolizers; Sharples separator; twenty h. P. marine boiler and Fort Atkinson can washer.

The two hardening rooms are 9x8x15. One for brick ice cream and one for bulk. The ice storage and milk room is 29x18 feet.

The company has shown a steady increase in gallonage each year; the biggest day this season was over 1,500 gallons, although the sales for several days have run up to 1,300 gallons.

The Amboy Creamery Company operates nine trucks, including three refrigerators. The large truck is used to deliver ice cream to Hartford City, 22 miles from Marion, where the company has a distributing branch. Another distributing branch is located at Amboy. The refrigerator unit is the company's own make, with a capacity of 370 gallons. It is mounted on an Indiana two-ton chassis, designed especially for this particular job, as the company demands a truck with plenty of speed. This Indiana truck will run 40 miles an hour, has 40x8 tires and 6 to 1 axles.

Officers of this company report that it has not been a favorable season for ice cream in central Indiana, for the reason that the weather has been cold and rainy during the months of August and September. Fred Yoars, manager of the firm, claims that the only reason they have shown a gain

this year is because of the considerable advertising they did. They spent one and one-half cents a gallon for advertising.

The plant is clean and well arranged and according to reports, the company has always made a quality cream, which has been the basis of their success during the past five years, showing an increase of about 20,000 gallons a year.

This firm is always represented at the dairy show and the national ice cream convention. "The inspiration and new ideas gained on a trip of that kind more than pay one's expenses to ice cream conventions and afford a fine vacation, too," says Fred Yoars.

THE UNION ICE CREAM COMPANY'S NEW PLANT.

The new building of the Union Ice Cream Company is two stories and basement, finished in specially matched, smooth finished, decorative brick and makes a very attractive appearance. The street side of the first floor is divided

three 500 gallon White vitrified, porcelain enameled wizard vats and an homogenizer. It has a terrazzo floor and tiled walls. The mix is conveyed from the vats to the freezers below by gravity.

The plant is equipped with a modern ice making and

View of new Union Ice Cream Co. building at Nashville, Tenn.

View of five Ft. Atkinson Horizontal Ice Cream Freezers in the Union Ice Cream Co. plant.

View of White Vitrified Porcelain Enameled Wizard Vats in plant of Union Ice Cream Company.

to four stores, two of which will be occupied by the offices of the company and two will be leased to outside concerns.

The freezer room is on the first floor and contains two 40 quart and three 40 quart Ft. Atkinson horizontal brine freezers with a Mojonier brick filling machine and overrun meter. This floor also contains a modern testing laboratory and a 7,000 gallon hardening room.

The mixing room contains an Alaska tubular cooler,

refrigeration system having a minimum capacity of 75 tons with approximately $4\frac{1}{2}$ lineal miles of pipe under refrigeration. The ice is crushed, elevated and loaded by gravity as is the salt.

They are shipping their product within a radius of 100 miles of Nashville and employ from twenty-five to fifty people.

Tony Sudekum is president of the Union Ice Cream Co. and W. E. Drake is secretary-treasurer.

* * *

OPERATING MECHANISM OF ICELESS CABINETS.

One of the largest manufacturers of ice cream and refrigeration machinery has lately perfected a small refrigeration machine in various sizes, ranging from $\frac{1}{4}$ to $1\frac{1}{2}$ tons in capacity, which can be connected to an ice cream cabinet and automatically keeps the ice cream at constant desired low temperature day and night without any ice.

The operating mechanism of the outfit consisting of ammonia compressor, condenser, etc., is in one compact unit. No concrete foundations or other arrangements are necessary. It can be moved from one store or location to another, if this is necessary. It is equipped with an automatic thermostat control which starts and stops the machine whenever necessary to maintain the desired temperature.

The compressor is a two-cylinder, enclosed type. What is described as a dependable self-oiling splash system of lubrication is used. The entire outfit is constructed throughout of semi-steel and tool steel, we are told.

The system is said to be specially designed for the use of anhydrous ammonia as the refrigerating agent. It is claimed that this has proved most practical and satisfactory for general use. The machine is operated with a $\frac{1}{2}$ H. P., 1,200 I.P.M. electric motor, connected to the compressor by belt. Condenser and receiver are enclosed.

In addition to the $\frac{1}{4}$ -ton outfits, the CP self-contained refrigerating machines are built in capacities of $\frac{1}{2}$, $\frac{3}{4}$, 1 and $1\frac{1}{2}$ tons. They can be set up and in operation in a short time after delivery as they are completely assembled at the factory, it is stated. The smallest or $\frac{1}{4}$ -ton size may be operated from any ordinary light socket. The larger sizes may be equipped with motor for operation from any power line.

* * *

The Kay-White Products Co., Inc., 8 Broadway, New York City, which company until recently had confined its products and activities to the confectionery trade, has announced other products to its line. Chief among the products for the ice cream trade is Scotch-Bob. Scotch-Bob is a concentrated base for butterscotch ice cream. It is not an extract, being sold in barrels, half-barrels, and kegs, we are told by officials of the firm.

Scotch-Bob was introduced at the national exposition at Cleveland last fall. Officials of the company were well pleased with the reception it was accorded. They say manufacturers using this new and novel ice cream will boost their winter sales.

Scotch-Bob is claimed to be made of the purest ingredients only, such as one would use on the table at home.

Mason City, December 10, 11 and 12, 1923.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Officials of the company say that the use of Scotch-Bob gives a delicious butterscotch ice cream with a rare richness, a texture smooth as velvet, and a taste absolutely new. The flavor is said to be similar to butterscotch candy. The company claims that it is a highly nutritious and body building food. The company supplies colored window posters with space for the manufacturer's name at the bottom to be distributed among the dealers, for window trims.

The Kay-White Co. is closely affiliated with the Star Extract Works, which firm has been in extract business for over thirty-four years and is widely known among the ice cream manufacturers of the country.

* * *

"TOMMY" STEWART MAKING GOOD.

Friends in the ice cream industry are much gratified over the success of Thomas J. Stewart in his new line of activities. Mr. Stewart recently joined the C. Nelson Manufacturing Co.,

THOS. J. STEWART.

Salesmen's Club. He has held various offices in national and state organizations of ice cream supplymen.

* * *

Ampco Metallic Coating is supplied by the American Solder & Flux Co., 2910 N. 16th St., Philadelphia, Pa. It is relatively new. This product comes in the form of finely divided powder, made with a liquid vehicle, and after the metal is properly cleaned the metallic coating is applied with a brush, spray or any other convenient means. Metal to be coated is then brought to the melting point of the coating, after which a pure tin coating, equivalent to the hot dip, is produced.

Officials believe this method is of particular advantage for repairing machinery, as they say it eliminates the necessity of dismantling, shipping to the dipping plant, etc. Ordinary retinning repairs can be completed in a few hours' time, it is claimed.

Company officials further say the coating comes in lead brand, for protection against acid and brine solutions, and also in zinc.

* * *

The J. G. Cherry Company, whose main offices and factory are at Cedar Rapids, Iowa, advise that a new bulletin illustrating and describing Cherry brine ice cream freezers is now ready for distribution to the trade.

The introduction goes into considerable detail on subjects which are close to the pocket-book of every plant owner, stressing particularly power savings effected because of the use of ball bearings; telling of the economy of special brine flow features to get sufficient volume; touches on the ever present subject of depreciation; and tells of the line of popular sizes available.

The Cherry brine ice cream freezers have been entirely redesigned during the past three years, discarding the old construction purchased from the C. & B. Supply Co., who were the originators of the horizontal brine freezer. The new models are being very favorably received by the trade, according to a J. G. Cherry Co. representative, who stated that over half a hundred freezers were shipped in December.

They will be very prompt in mailing a copy of this Bulletin No. 2059 if requested, and if this magazine is mentioned, for 1924.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

T. L. VALERIUS HAS HAD ACTIVE CAREER IN ICE CREAM INDUSTRY.

With the recent appointment of T. L. Valerius as general sales manager of the Nizer Corporation of Detroit, two pioneers in the creamery industry joined hands.

The automatic electric Nizer cabinet seems destined to be a successful mechanical cabinet. The broad United States patent claims which have been granted on its construction, officials believe, show it to be in every sense a pioneer—a pioneer which seems destined to revolutionize the handling and distributing of the American public's favorite food.

For he has been known to almost every ice cream company and dairy products manufacturer in the United States

T. L. VALERIUS.

for thirty years or more, as one who has actively pioneered many of the successful improvements and inventions in the creamery machinery field.

"Val," as he is known to many thousands, entered the field in 1890 as chief engineer of Cornish, Curtis & Greene Manufacturing Co. of Fort Atkinson, Wisconsin.

During his eight years with them he helped to specify and install new types of machinery in many of the ice cream cheese and milk plants which today are known as leaders.

But his activities were not limited to field work. He was the inventor of several machines which are now generally used, and was largely responsible for the perfection and introduction of many others.

In 1898 when the Cornish, Curtis & Greene Mfg. Co. was consolidated with the Creamery Package Co. of Chicago Mr. Valerius was retained as chief engineer of the consolidation.

In 1920, Mr. Valerius became associated with Davis & Watkins Dairymen's Mfg. Co. of Chicago, and from there came to the Nizer Corporation.

In his new work as in the past, he will spend much time on the road, "replacing old systems with the worthiest of the new systems," we are advised.

* * *

The Gaulin 2-stage valve is the latest development in homogenizing devices offered by the Manton-Gaulin Manufacturing Co., Boston, Mass. Efficiency, long life and adaptability are built into it and "leave nothing to be desired, we are told by the company's circular.

The company claims that not only is the homogenizing efficiency increased over 100 per cent with the 2-stage Gaulin, but in addition it is now possible to so effectively control the mix that the degree of homogenization and the body of the mix after homogenizing bear no relation to each other.

"In other words, the product may be thoroughly homogenized and yet be as light in body as when it left the pasteurizer, or it may, at will, be made so heavy and viscous that it will not run over the cooler," it is asserted.

* * *

The Citrus Products Co., Chicago, advises that it has been lining up new salesmen to get started on a vigorous sales campaign and "make 1924 a banner year."

The sales force has been expanded by the acquisition of the following salesmen, F. A. Gilford, N. D. Polak, E. I. MacKenzie, H. R. Campbell, Jos. E. Goodrow, Carl W. Ru P. T. Murphy, and C. H. Achelpohl.

C. H. Achelpohl, vice-president and general manager, said the company has not found it necessary to increase prices.

MENTION "THE REVIEW"—IT IDENTIFIES YOU.

TACOMA WILL HAVE ONE OF THE LARGEST ICE CREAM PLANTS ON PACIFIC COAST.

Because of the splendid manufacturing and distributing advantages of the city of Tacoma, Wash., it has been selected as the site of the new Victory Ice Cream Company, one of the largest and most modern ice cream plants on the Pacific Coast. The cost will be more than \$250,000. The building, now in course of construction, will be of concrete, three stories, situated at East 25th Street.

President Robbins, the ice cream expert who was sent to choose a location for this plant, says that the selection of Tacoma will make that city one of the largest distributing points for ice cream on the west coast. Hundreds of dealers will be supplied. It is expected that the plant will be ready for operation in the beginning of February.

Features of the new Victory Ice Cream Company plant, as described by Mr. Robbins, include: An ice cream making establishment strictly modern in every particular, occupying three full floors, each 80x136 feet in dimensions; new silver-lined ice cream freezer; modern sharp rooms with walls of 10-inch pressed cork and tile and glass-lined storage vats; new modern packing machines, to avoid touching the products by hand; automatic electric ice cream cutters; and electric washing and sterilizing machines for the equipment, thus assuring the strictest sanitation.

"We will have a plant of snowy-white cleanliness, which will be open to public inspection at any time," continued Mr. Robbins, "and we expect the new place to be ready for operation early in February. We will introduce a variety of our own exclusive flavors, made strictly under our own name, and will have a modern economical delivery equipment which will insure the best of service to our patrons throughout the various counties covered.

"One thing that we will stress particularly in the making of our ice cream will be food value. Ice cream is becoming known as a product of exceptional merit from a food value standpoint, and we will make Victory ice cream high in the elements that nourish and energize the human system."

HUTCHINSON COMPANY BUILDS NEW PLANT.

The Hutchinson Company of Cedar Rapids, Iowa, is erecting a new ice cream factory at Monticello, Iowa. This will be a modern plant in every respect, with facilities for handling the trade of the surrounding country.

This company is also opening factories at Mason City and Clarion and has purchased the ice cream business of Mr. Ballantyne at Forest City. They also have branches in Iowa Falls, Waverly, Oelwein, Arlington, Vinton, Tama, New Hampton, Oxford Junction, West Liberty, Iowa City and Estherville.

GREENVILLE ICE CREAM COMPANY ERECTS NEW FACTORY.

The Greenville Ice Cream Company of Greenville, South Carolina, is erecting a new brick and concrete building at the approximate cost of \$26,000, dimensions 55x110 feet, two stories high. To the present equipment they are adding additional refrigeration, holding vats and other equipment at a cost of about \$12,000. The plant, which when complete will be one of the largest and best equipped factories in the state, will be ready for operation about March first. L. E. Girardeau is proprietor.

WHO INVENTED THE ICE CREAM SUNDAE?

What is the origin of the word "sundae?" The Hydrox Corporation is conducting a campaign through advertisements in the Chicago daily newspapers to locate the man who "invented the ice cream sundae."

"We will give him a hundred dollars in gold and we will give the one who discovers him all the Hydrox ice cream sundaes that he can eat for a year," the company says in one newspaper article.

The company is getting innumerable letters as to how the name originated. The dictionary is not clear in its definition of the word sundae. It merely says that a sundae is a "college ice."

It seems that the word originated in America during the time sale of sodawater was prohibited, and soda dispensers were inventing drinks and ices that could be used without the use of carbonated water.

The dish that was sold on Sundays only was called "college ice." Because of the fact that it could be obtained only on the Sabbath, the word 'sundae' came in vogue as applying for "college ice."

It seems that through a blunder of a soda dispenser the word was adopted in connection with ice cream dishes. About twenty-six years ago a soda clerk in Pittsburgh used the word sundae in error. This fountain was largely patronized by college students. It would delight the students to confuse the dispenser in giving their orders. Once when he tried to repeat an order as a sundae, the students thought it was such a joke that they afterwards called "college ice" sundae. At first the soda fountains spelled the word Sunday, but later on it was spelled sunda because of some people raising objection to the connection with the Sabbath. Subsequently the word was used in formulas and newspapers and the three endings y, a and ae were used. Eventually the ending ae was generally adopted.

ROSZELL AND SCHWINDELER HONORED BY ILLINOIS ASSOCIATION.

At its annual convention in Chicago in December, the Illinois Association of Ice Cream Manufacturers expressed appreciation for the loyal services rendered the association by its retiring president, L. W. Roszell, and one of its past-presidents, W. A. Schwindeler. These gentlemen each were presented with a gold watch, chain and knife.

Much of the credit for the success of the Illinois association, which is the oldest and one of the most effective in the industry, is given to Messrs. Roszell and Schwindeler. Mr. Roszell is one of the most active leaders the association has ever had. Mr. Schwindeler has been identified with the association for a number of years. He recently gave up his business in Illinois to join the Carpenter Ice Cream Co., St. Louis.

LARGE CONSUMPTION OF ICE CREAM IN IOWA DURING 1923.

A great increase in the production of ice cream has taken place in the dairy section of the inland states, such as Iowa, where 4,027,000 gallons of ice cream, as against a total of 263,000,000 for the whole of the United States, was eaten during 1922. The 1923 production places Iowa second among the 48 states in per capita consumption. The aim of this state during the present year is to raise Iowa to first place on a per capita basis, and a committee of the directors of the association has been elected to carry out this aim by appointing meetings throughout the state.

VIRGINIA MANUFACTURERS MEET IN MARCH.

VIRGINIA dairy manufacturers will meet in convention at Harrisonburg, March 5 and 6. Ice cream manufacturers of that state will join with creamery men in discussing the promotion of dairying in Virginia.

A. F. Howard, head of the Monticello Dairy, Inc., Charlottesville, Va., is president of the association. He also is head of the ice cream division of the association, which was formed last year under the co-operation of The Ice Cream Review. E. M. Blair of Lynchburg is secretary.

Mr. Howard advises The Ice Cream Review that preparations are being made for a very interesting program. The first day of the convention will be given to the discussion of butter making and the second to the problems of the ice cream men.

Dairying is advancing rapidly in Virginia, officials of the association say. The state is rapidly forging to the front in dairy development in the South. Ice cream manufacturers in Virginia are taking much interest in promoting dairy industry.

Don't let that used machinery of yours stand in your way. Turn it into cash by advertising it for sale in the "Review" Want Department.

COTTON STALKS USED TO MAKE ICE CREAM CABINETS.

The ice cream industry affords the Southern farmer a way to make profitable use of cotton stalks. At least, success is indicated for a company organized for the purpose of making ice cream cabinets out of cotton stalks. Ice cream manufactured in Memphis by Fortune's, Inc., and shipped to New York City, a journey of about sixty hours, reached its destination in perfect condition. Nine-tenths of the ice had not melted.

Success of this project means that the cotton stalks that have heretofore been a burden to the cotton farmers because of the necessity of knocking them down and burning them to rid them of the boll-weevil, will now bring them in revenue. Other uses for which the cotton stalk is said to be adopted are for shoe heels. A company has been organized to try out this experiment.

The Kot-N-Wood Products Co. of Memphis is making the ice cream cabinet that is supplied from cotton wood.

NEW PLANT.

The Harrisburg Dairy Products, Inc., has opened at Harrisburg, Illinois, one of the largest, most modern and up-to-date creameries, milk markets, and ice cream plants in the southern part of the state. Stanley Wilson is one of the officials.

The ICE CREAM REVIEW

Volume 7, Number 8

MILWAUKEE, WISCONSIN—March, 1924

Two Dollars a Year

The Newest Member of the CHERRY Line

- 1 Patented removable inner freezing cylinder. Eliminates sending to factory for cleaning brine sediment.
- 2 Enclosed "Safety-First" gear case. Cut gears run in oil.
- 3 All brine connections are brass. Durable plug type of valve used.
- 4 Symmetrical lines of the solid cast, white enameled base, add greatly to beauty of this freezer.
- 5 Heavy tinned copper batch tank complete with strainer has abundant over-capacity.
- 6 Fruit hopper is separate from batch tank. Feeds fruit independently. Fitted with ground valve. No leaking.
- 7 Belt shifter handle within easy reach of operator. Belt shifter operates quickly and positively.
- 8 Peep hole, covered, to enable operator to watch condition of mix during freezing stage.
- 9 Head is secured by four slotted clamps which are held in place with tinned brass wing nuts. Head easily removable.
- 10 Outlet gate designed to empty freezer straight downward into cans in minimum time.
- 11 Large square base assures rigidity and no vibration when freezing is running—means less wear and longer life.

"CHERRY" 40 Quart Freezer

A medium priced machine with every essential refinement and modern convenience of higher priced freezers. All important features embodied in our larger machines are included in this smaller unit.

Ask for literature and prices—you will appreciate knowing more about the Cherry 40 quart machine.

*In buying, the certitude of Safety
is possible through the Seal*

QUALIFIED observers agree that the country's business is sounder than a year ago. For ice cream there is no reason to make exception; it is the general consensus that manufacturers' buying will anticipate a summer of increased production.

MARCH 1924

DEFINITE announcement that Milwaukee has been selected as the scene of the 1924 National Dairy Show will be received with interest by ice cream manufacturers who understand what the development of dairying means to the expansion of their own industry. It is sure to meet with the deepest approval of those dairy manufacturers who know how appropriately awarded is Milwaukee's title of "America's Dairy Metropolis."

From the outset it was evident that Milwaukee's bid for the National Dairy Exposition could not be overlooked without slighting the best interests of the dairy industry and ignoring the wishes of its rank and file.

Milwaukee is the logical place for what some of us are pleased to call the annual dairy classic. Milwaukee's auditorium is equipped with exposition facilities adequate to all needs. Hotel accommodations are all that could be desired. No city in the United States has entertained more dairy conventions than Wisconsin's "Cream City." Dairy delegates need no assurance that they always are at home in Milwaukee.

RACING hour-hands sweep fast toward another so-called ice cream "season," and soon Jack Frost will stand at bay as manufacturers launch forth upon a new program of activities. While the "unforgiving minutes" are being ticked off, members of the industry will busy themselves this month preparing for a campaign that bids fair to be one of the most active on record.

Business has been much greater in the passing winter months than heretofore in cold weather. That this is not due to initiative by manufacturers, however, is shown by the fact that per capita consumption has not increased.

One can look back upon the fleeting winter with some measure of gratification in regard to volume of business. Manufacturers accepted the white challenge when the frost king sent the first snowfall. Delivery trucks went their rounds between rows of snowbanks and in many instances gallonage held up in truly encouraging manner.

As regards development of the industry's opportunities, however, there is nothing much to be said. With figures on last year's production incomplete, statistics are well enough in hand to show that the gains in consumption are not commensurate with the growth of population. It is not likely that there will be show any increase in per capita winter consumption after December.

But with opportunities looming large for extension and consistent activities in the industry this year, there are reasons to believe that manufacturers are awaiting the opening of the spring drive to seize upon various means of promoting consumption. The ice cream industry is no different from any other in putting forth its best efforts when its revenue is coming in fastest.

It seems that a good reason is near at hand. The industry has a foundation of sound conditions. It awaits action with a healthy throb of optimism.

"YET EDITOR" is in the land of cotton and certain politics. No, you guessed wrong. We are not within gun shot of that time when a man can leave his desk covered with work, and his walks covered with snow, and play golf under a Florida sun. Business is another of our publications brings us to this pleasant section where everybody is praying that Henry Ford will get Muscle Shoals. As we write these lines, cooped up in a stuffy hotel room, we are listening to the patter of the rain which would freeze before it reached its destination if it tried to do any pattering in the land with which we are more familiar.

Everywhere we go we hear but one subject discussed. Folks here are not interested in politics, except as they affect the Muscle Shoals project. In the hotels, on the trains, in the business houses, on the streets, everywhere you find men earnestly discussing this great absorbing topic. We have yet to hear a voice raised against the plan to lease the project to Henry Ford. We surmise that if there were any voices raised against it originally those voices have been stilled. Whatever the method

securing unanimous approval might have been it is surely effective.

We called on our good friend, J. W. Clopton, Decatur, Alabama, who is secretary of the Southern Association of Ice-Cream Manufacturers. Like all the rest, he is an enthusiastic booster for the Muscle Shoals project and gave us a clearer idea of its importance to the Southern States than we ever gained before.

We reasoned thusly: surely if the business men of the South are all back of this thing then they must be right. Surely they can't all be wrong. We determined to go then and there to see Muscle Shoals. We changed our itinerary and spent an entire day seeking information right on the spot where history is being made.

We came away full of facts about this mighty undertaking and a firm conviction that these folks know what they want. The man who has looked upon the mighty Niagara can partially comprehend the immensity of the Muscle Shoals project. The man who has not looked upon Niagara in her glory and power cannot possibly understand the bigness of Muscle Shoals. Neither, unless he lives in the South or has visited it recently, can he understand what it means to these people.

It is not the policy of The Ice Cream Review to discuss politics, but this is not a political question. When the people of a great section of our country, who know what they need better than other folks, are unanimous in asking for a thing we believe they should have it unless it is going to harm someone else.

Here are the people of this great Southland, sorely in need of things that will build up business enterprises, asking that Congress accept Henry Ford's offer to operate Muscle Shoals for the benefit, not only of the South but for the entire country. We say, let them have what they want.

Those who object to Henry Ford's offer want to see Muscle Shoals operated by the government. Undoubtedly this plan would also benefit industry but we are only stating a fact when we say that the business men of the South would rather see this huge undertaking in Ford's hands than mixed up with politics.

The ice cream industry of the South will be greatly benefited by improved economic conditions. It needs an impetus and their brother ice cream manufacturers in other sections can, we believe, perform a real service for the industry by putting their influence on the side where the ice cream men of the South, along with all other business men, are found.

Why not lend our influence toward helping our neighbors in the South who surely know what they want? Why not urge our senators and representatives to work for the adoption of Ford's offer which is now before Congress? Who is going to boost for the things that help our industry if we don't?

HERE is the baseball fan and the prize fight fan; the golf fan and the horse race fan—in fact, almost every man is some kind, or several kinds, of a fan. We don't get up much enthusiasm for several things that

normal men seem to go half crazy over, but we are a fan nevertheless.

We are an ice cream fan. Now, that, you might say, is very appropriate. The editor of an ice cream trade paper should believe in the product that he is constantly writing about. But we do more than believe in it. We eat it.

To admit that we can get more pleasure by eating than by playing golf or watching a horse race may indicate a degree of depravity, but we make the admission just the same.

We like poor ice cream. That may shock some of you, but it is the truth, nevertheless. True we don't like poor ice cream as well as we do good ice cream, but we like it. We never remember leaving a dish of ice cream because of its inferior quality. Lack of capacity has sometimes forced us to leave part of a helping put before us by a too generous host, but even such occurrences have been few and far between.

Twenty-five years ago we were operating a co-operative creamery in Minnesota. Our contract called for a very modest cash stipend, but in addition we were allowed "house rent, fuel and butter, milk and cream for family use." Oh, boy!

Each day after the milk was separated there were several hundred gallons of pure, sweet cream testing about 35 per cent butterfat. And the contract read, "butter, milk and cream for family use." Oh, boy again!

We didn't have modern equipment for making ice cream but you will agree, we are sure, that we had the "makin's." We don't know what our total solids were, but we are sure we always had the butterfat content high enough.

In those days we cultivated a very healthy appetite for ice cream—such as it was. This appetite has been whetted with the passing of the years until we can eat almost any kind of ice cream at any hour of the day or night and thrive on it. When it becomes the proper thing to eat ice cream with buckwheat cakes and sausage for breakfast we shall consume still more of it.

We should like to go on and tell you the effect on a human body of twenty-five years abnormal consumption of ice cream, but that would be boasting. This was started as a confession, not as an advertisement.

It has been our solemn duty to consume a double portion of ice cream during all these years in order to insure the family's loyalty to the industry. The good lady who has shared our joys and sorrows during the past quarter of a century has not shared our ice cream. She doesn't like ice cream and even her sense of loyalty or social courtesies will not make her eat ice cream. In all other respects she is perfectly normal.

What is our purpose in using space, that the advertising department might sell for real money, to make this rambling confession?

Well, it is just to bring out a moral, and here it is: eating ice cream is pretty much of a habit. It is a good habit and should be encouraged. It can be encouraged, both by the consumer and by the seller.

When the men who are making and selling good ice

cream fully realize this great truth they will be on the way to a volume of business in this country that they have never dared to dream about. Ice cream can be made, and will eventually be made, the great popular dessert. As such it will be consumed in quantities that few now realize.

A few years ago gum chewing was frowned upon by parents and teachers. Stenographers could get by with it as long as they were ordinarily careful in selecting parking places.

Today gum chewing is a national habit. Staid business men borrow a chew of gum from the pioneers who blazed the way toward making the habit respectable.

Advertising—lots of it—backed up by good service has increased the consumption of gum to a point undreamed of a few years back. There may be those who will not admit that the habit is respectable, but they will not deny the results.

If gum chewing—certainly a questionable habit from a health standpoint—can be made a great national habit, how about teaching folks to eat ice cream? The same effort should easily secure the same results.

But we must remember that the folks who make and sell gum don't have a gum "season." They don't hide it away from their customers. They put it right out in front and the consumer can buy it anywhere and everywhere.

Some of our most successful ice cream manufacturers are employing methods which are gradually making the consumers in their territories **habitual** eaters of ice cream. They know no "ice cream season." They are teaching their customers to eat more ice cream each year. They are increasing their volume year after year by making more and heavier users of ice cream. It is the substantial way to build up the industry, too.

READERS who do not overlook the article in this issue entitled, "How Much is Your Dealer Worth?" will be rewarded with some very sanguine suggestions regarding the expansion of the outlet for ice cream. It was written for The Ice Cream Review by Miles D. Allen of California, where much thought has been given to building up ice cream consumption. Manufacturers of Southern California found themselves with a territory extending just as far as they could wisely permit. To get more business they knew they would have to increase the patronage of their regular customers. Mr. Allen gives an interesting account of how much they have accomplished in this direction through their dealers.

ICELESS cabinets are discussed in this issue from the angle of the manufacturers who have for some time had them in actual use. Their optimism over automatic refrigeration is the basis of a very interesting article on page 14. Read it and you will get a better idea of what iceless cabinets promise for the industry, and on what basis they should be used.

WE HOPE that none of our readers will conclude after reading press dispatches, that this beautiful city in which we live has seceded from the Union.

The Milwaukee city council adopted and forwarded to Mrs. Woodrow Wilson suitable resolutions of sympathy and expressions of admiration of her late distinguished husband. The mayor of Milwaukee refused to sign them and is quoted as saying that "Woodrow Wilson was not a great American."

The good people of this fair city are up in arms about it, but they can't do very much before another election. People who understand Milwaukee politics will not hold anything against the city for what this man says and does, but folks who don't understand will wonder whether he correctly represents the people.

He does not, and if you could know the good people who live here you would understand that he doesn't. They are just itching for election time when they can take him by the seat of his political pants and throw him into Lake Michigan.

PUTTING Ice Cream Over the Home Plate, is the title of an article in this issue that is sure to be of interest. The National Association of Ice Cream Manufacturers is in the midst of preparations looking to advertise ice cream in the American home, probably something that will lead up to a national advertising campaign along this line. Group advertising is not altogether new in the industry, as you will see by reading the article.

JANUARY, the month commonly known among business observers as the "calendar's industrial graveyard," passed without a single failure being recorded among ice cream manufacturers of America by R. G. Dun. This usually reliable reporter failed to find any weakening in the ice cream manufacturing ranks during the one month in the year that is known to be the most strenuous for virtually all industries and particularly so for the ice cream trade.

BULLETIN OF EVENTS

- North Dakota Ice Cream Manufacturers' Association**—Annual Convention, Grand Forks, March 4 and 5. Convention headquarters, Frederick Hotel. Secretary, H. K. Geist, Grand Forks.
- Virginia Ice Cream Manufacturers' and Creamerymen's Association**—Annual Convention, Harrisonburg, March 5 and 6. Secretary E. M. Blair, Lynchburg. (First day of the convention for creamerymen and second day for ice cream manufacturers.)

How Much Is Your Dealer Worth?

Your Local Dealer Can be Made Your Best Salesman by Proper Education in Selling Ice Cream. Interest Him in Interesting the Public—In Winning Confidence for Ice Cream.

By MILES D. ALLEN*

(Written Especially for The Ice Cream Review)

IS it better to educate your local dealer to sell more ice cream or is it better to educate the public to buy more ice cream from the dealer? This is a question of whether it is better to put the cart before the horse or the horse before the cart, and many ice cream manufacturers change their minds periodically on this question.

Where one ice cream manufacturer concentrates most of his advertising effort on the dealer, his competitor is content to concentrate on the buying public and to let the dealer go hang. Other manufacturers vacillate uncertainly from the dealer to the public and back again with the greatest regularity leaving everyone with the question in their mind "What is it all about?"

It has always been a cardinal principle of advertising that to be effective it must be continuous, yet some ice cream manufacturers will try out one scheme because it looks as if it would work wonders and just when the scheme has had time to gather momentum, they become finicky about the outcome and switch to a diametrically opposite scheme. Such an attitude has created a disastrous condition in ice cream advertising generally and it will be the purpose of this article to try and overcome some of the indecision in the minds of ice cream manufacturers.

Educate the Dealer First.

It would be presumptuous for any individual to state that the dealer should be neglected for the buying public or vice versa, but there is a happy medium of advertising effort which concentrates on both and will bring maximum results with a minimum of expense, and that is something every wide awake ice cream manufacturer is looking for. Local conditions many times alter specific cases but generally a common sense working plan carried out consistently will bring very satisfactory results.

It has been the author's experience that the local ice cream dealer should be the first individual to receive "schooling" in the merits and advantages of your product so he can answer questions intelligently and "sell" the public on the merits of your ice cream with absolute conviction. If the buying public asks your dealer questions about the ice cream he is selling and Mr. Dealer doesn't know, watch out for the success of your advertising campaign for it is liable to turn out a flat failure—your dealer is the final point of contact before the sale is actually made—never lose sight of his importance to you. No ice cream manufacturer would ever think of sending out a salesman to interview prospective drug, confectionery and cafe dealers without first making sure that he was conversant with all of the various steps in the manufacturing process—the clean sanitary conditions under which it is manufactured, and the reason why it is best for any dealer to sell your ice cream. In other words you would sell the salesman on the product so that he could later sell the customer. Yet day after day, week in and week out, many an ice

cream manufacturer neglects his best salesman, his dealer, and expects him to glean information out of the clear air. Many a good dealer is left in utter ignorance of the qualities of your product and doesn't know any special reason why he is handling your ice cream except that he believes it is a little better advertised. Under such conditions he sells your ice cream in spite of your advertising, not by the aid of it.

Increase Sales Force.

If you have a sales force of ten men why not increase that number to several hundred or several thousand by gaining the support of your entire group of dealers? Your salesman's contact with the dealer should be intimate so he will always be in a position to introduce new advertising ideas. One of the best ways of securing the dealer's co-operation is by a series of monthly letters or broadsides, each calling particular attention to a point of superiority in your product or service—this is invaluable. In January you could have called the dealer's attention to outstanding holiday events during the month and the possibilities of increasing his special order business; with this idea tie up a point of superiority such as the fact that your ice cream contains just the proper ingredients to make it delicious and yet make it keep well if repacking is necessary. For February you could have continued with a reminder of holiday events and tied up some other point of superiority on your quality or service. In conjunction with such a dealer's campaign always feature special flavored ice creams. After all, appetite appeal is the most important in ice cream advertising so you should use advertising signs embodying this appeal. Even on the broadsides or letters use colored plates showing some new ice cream dish or receipt. The dealer must be educated slowly but consistently—eventually he will become a booster and all the preliminary preparation is worth will be all it costs. Carry out this campaign of monthly letters or broadsides throughout the year for the best results.

Barnum of circus fame once said "Make the public talk about you—good or bad—but make them talk about you." Literally speaking, Barnum "said a mouthful" for he realized that as long as the public talked about the Barnum circus he was being advertised. Henry Ford gets his best advertising from Ford jokes, etc. Make your local ice cream dealer enthusiastic about your product and he will sell more.

THERE are many other forms of advertising which can be supplied the dealer in conjunction with your direct letter or broadside campaign. Fountain suggestions and ice cream receipts are welcome only if brief and usable. Always send your fountain suggestions to the owner of the store, even though he leases out his fountain. Owners of drug stores many times lose sight of the fact that their soda fountain can be made a profitable part of their business and look upon it as a necessary evil. The sooner the drug owner learns the true value

Taking to the Air to Sell More Ice Cream

People Who Pay Little Attention to Newspaper Advertisements are Beginning to Pick Up Interesting Bits of Knowledge Concerning Ice Cream as a Food, its Sanitary Manufacture, and its Convenience to Housewives

Radio and Aeroplane Utilized

ICE cream manufacturers are taking to the air to sell more ice cream. The aeroplane first opened up possibilities for advertising merchandise in the clouds, and ice cream manufacturers already have taken advantage of possibilities of drawing attention by way of the aeroplane.

This form of advertising is especially spectacular since the coming of the practice of "sky-painting." As is generally known, "sky-painting" means using the aeroplane to project smoke and spell the words of whatever it is someone happens to want to sell.

Several months ago much interest was created when W. A. Irvin of the Irvin Ice Cream Co., Houston, Texas, announced that he was delivering ice cream by aeroplane. This was a very unique and novel advertising scheme. By delivering his ice cream over the clouds to dealers, Mr. Irvin drew much publicity to the industry. But so far as effective advertising is concerned Mr. Irvin and most others following novel forms of publicity will have to take a back seat to the radio.

A. C. Gruenewald, vice-president of the Colonial Ice Cream Co., Philadelphia, a few weeks ago, stood before a broadcasting outfit in his home city, cleared his throat and then proceeded to tell several thousand people at one time many interesting things about ice cream, its goodness, wholesomeness, economy, convenience to the housewife, and its importance to health.

The radio is one of the most promiseful means of advertising. Politicians advertise their platforms and propaganda, preachers advertise God, schools advertise their course, singers their voices, and lately, ice cream manufacturers have begun to realize that they can do some very good advertising over the radio.

People who would not read a large newspaper ad all the way through, even if in part, sat in their homes, in towns and cities through the entire country, and heard Mr. Gruenewald tell them facts about ice cream that the industry has been trying for many years to get over to the public.

THUS it is that the radio promises to help the ice cream manufacturers bridge a gap that thwarted the development of the industry for many, many years. There is a reason for the public quietly sitting and listening to a talk about ice cream. In the first place the

radio is a novelty and will be a novelty for some time, because it is one of the strangest and most interesting playthings that have been introduced to human society.

The radio always will have great fascination for people, for there is no misunderstanding the mystic appeal that comes from sitting and listening to strange messages borne on the still night air, steeped in the mystery of ethereal magic. When Mr. Gruenewald proceeded to tell his hearers that ice cream, contrary to certain opinions, is not a luxury, but an inexpensive and wholesome food, the greater part of this large audience, no doubt, felt that they were being instructed as well as entertained.

MR. GRUENEWALD really was advertising Philadelphia ice cream for his subject concerned the "Methods of the Philadelphia Ice Cream Manufacturer" and the development of the industry in that city. However, we know that he rendered a real service to the industry as a whole when he told his large audience this statement:

In a large plant a staff of competent chemists guard carefully the steps of manufacture and test all raw materials coming into the plant and which are to be used in the course of manufacture.

He then went on to describe the processes of ice cream manufacturing. He covered the process of the raw materials from the mix until the time when it was delivered into the cans, and then he had this reassuring statement to make to his audience concerning the cleanliness of ice cream manufacturers:

"The equipment necessary to make the delivery of ice dealer must at all times be bright and clean, and before being refilled must go through a thorough washing, which includes a soaking and washing and a sterilizing process.

The equipment necessary to make the delivery of ice cream to the dealer is a large and important part of the ice cream company. A large fleet of trucks and wagons are necessary for the smooth-running operation of any large ice cream plant."

People from all over the country wrote the Colonial Ice Cream Company that they were much interested in Mr. Gruenewald's speech.

There is no doubt that the radio is opening up to the industry in general a very effective method of getting over to the public the story of their products, and the ice cream industry certainly is among those that can best accomplish its purpose in this way.

Putting Ice Cream Over the Home Plate

Increasing Per Capita Consumption by Getting the Story of Ice Cream into the American Home is Matter Now Before the Industry. National Association Considers Possibilities of Slogan Campaign

Group Advertising a Proved Success

THOUGHTS on building up the popularity of ice cream through national advertising have engaged earnest minds in the industry in the last several years, particularly in late months. The Ice Cream Review has touched upon this subject in various ways, and in every direction that we have turned in following this idea, all the evidence has been in favor of a project to teach the American people something about America's greatest food dessert.

The National Association of Ice Cream Manufacturers is preparing to take up this matter, and probably the near future will see some definite step in this connection. The association has been pondering the matter of national advertising for the last few years.

The slogan committee of the national association has formed an interesting plan to put into motion a slogan campaign, an undertaking something in the nature of a forerunner to the actual advertising campaign. The slogan committee feels that with the co-operation of its members, it can work out a drive for a slogan that will attract much attention to the ice cream industry. Under present plans the committee would offer a prize of \$1,000 for the best slogan suggested for adoption by the National Association of Ice Cream Manufacturers in its advertising promotion work, including labels, letterheads, posters, etc. The prize would be offered in advertisements in some nationally popular magazine.

AN APPROPRIATION of \$5,000 has been granted the slogan committee by the National Association of Ice Cream Manufacturers. E. C. Sutton of Buffalo, president of the slogan committee, feels that the industry can get "a tremendous amount of advertising out of such a campaign."

The benefits will not come from the slogan itself so much as from the actual campaign in quest of a slogan. In this campaign the national association wishes to enlist the support of the state associations. It has been hoped that the officers of every state and regional association will ask their directors to approve an appropriation for a prize to be added to the prize offered by the national association, if the winning slogan should be suggested by someone in their territory. Whether this be done or not, the national officers hope that these associations will co-operate in the campaign to the extent of having manufacturers in each city and community offer a prize collectively for the best slogan to be submitted to any committee they may appoint, the slogans to turn to be transmitted to the national association's slogan committee.

OFFICIALS of the association are much elated over possibilities of such an undertaking, and President Vernon F. Hovey declares that this campaign, if supported, should give the industry a vast amount of advertising. He certainly is justified in the belief that it would "cause hundreds of thousands of people to talk ice cream."

This is the extent of the association's progress in advertising thus far. Just what is to be done by the association's advertising committee, which is considering plans for some certain line of procedure in group advertising, remains to be seen. The slogan campaign, of course, would merely be a temporary proposition, while anything actually looking to a consistent co-operative advertising campaign would have to come through the advertising committee. W. A. Schwindeler of St. Louis is head of this committee. He is expected to make some definite recommendations to the national association in regard to national advertising in the near future.

Just what can be done to nationally advertise ice cream? This matter has been discussed by leading members of the industry for some time. It is the consensus of opinion among manufacturers who have witnessed the success of other industries in this work, that the ice cream manufacturing trade can accomplish something of real importance toward building up the popularity of ice cream not only as a food confection in the stores but also as a food dessert for the family table day by day.

The Story of Family Brick Ice Cream.

CO-OPERATIVE advertising is not a new idea in the ice cream industry. In considering what can be done on a national scale, it is very interesting to note what already has been done.

Many of our good ideas come from California these days. One of the best developed in that state in a long time was the idea of the family brick and the system of getting it over to the family table.

"Quantity production of a quality product" is the story behind the success of the California ice cream manufacturers of quality brick. When you ask California ice cream manufacturers how they were able to do it, that's the answer you get. And when you make a deep study of the situation that's the conclusion you reach in your own mind. But—there was advertising. About a dozen ice cream manufacturers of Southern

Merchandising Convention for Ice Cream Dealers

Breyer Ice Cream Company Invites Dealers of Eight States to Great Convention
to be Held in Philadelphia This Month

Sales Demonstrations Planned

THE Breyer Ice Cream Co., Philadelphia, will strike a blow for better retail salesmanships on March 24, 25, 26 and 27. On those days the first ice cream dealers' convention will be held under the direction of the Breyer company.

Every ice cream dealer, restaurant and hotel proprietor, delicatessen, grocery and bakery store owner in Philadelphia and those of seven surrounding states have been invited to attend the convention. The greater part of the affair will be staged in the large auditorium of the new plant of the Breyer Ice Cream Company.

This second Breyer factory, which is said to be the largest and most up-to-date ice cream production center in the world, is favorably situated on 43rd Street below Woodland Avenue, West Philadelphia. The first Breyer plant continues in operation at 9th, Cumberland and 8th Streets, North Philadelphia.

The particular object of the ice cream dealers' convention is to show men who sell ice cream how to become more efficient in the handling of their stores and merchandise and to point out to them the safest and most likely roads that lead to greater sales and profits. In this convention the Breyer company will carry out ideas that The Olsen Publishing Company has long urged the trade to follow.

Two convention meetings will be held each day—one in the afternoon and one in the evening. At each session experts in their individual lines will address the dealers on subjects that hold their business interest. There will be talks on running the soda fountain, general care of ice cream and other soda fountain goods, the arrangement of the various kinds of retail stores, the proper use of the most modern fixtures, efficient methods of small retail store bookkeeping, guidance in the purchase of salable merchandise and other subjects of every day interest to ice cream merchants.

After each address there will be open discussions, at which the individual problems of the merchants attend-

ing the convention will be dissected and developed along modern constructive lines.

THIRTY-SIX booths have been erected in the large Breyer auditorium and these will house displays of allied merchandise such as soda fountains, store fixtures, etc., in which ice cream dealers are interested. By the way present plans are shaping up, the auditorium will very likely assume the proportions and effectiveness of the typical automobile, radio or food show. Dealers will have every chance to meet representatives of exhibiting firms and learn first-hand anything they may want to know about the manufacture, sale or distribution of the products displayed.

As the dealers gather for the convention events, the machinery of the massive new Breyer plant will be put into operation for the first time and the visitors will have the opportunity to see the workings of the most modern ice cream making processes and equipment. Guides will conduct parties through the plant at regular intervals. This new plant is said to have the largest capacity of any ice cream plant in the world. It is double that of the first Breyer plant.

The entire ice cream dealers' convention will not be given over entirely to business discussion. Many different kinds of entertainment will be provided for the visitors and their families by the Breyer company. Vaudeville acts from the local theaters will be staged in the auditorium. Moving pictures will be shown especially for women and children while the dealers are in conference. A jazz orchestra will lend musical spice to each session. Refreshments, including newly-made Breyer's ice cream will be served.

Every attending dealer will be presented with a valuable gift which will serve as a memento of the occasion. A number of valuable prizes will be given away each day. Radio sets, suitcases, store fixtures and other articles of value to ice cream dealers will be among the trophies.

Launch Co-operative Sales Plan in Oklahoma Next Month

"Ice Cream Week" Beginning on Easter Sunday, to be Followed by Special Week-End
Sales Till September 1, in Co-operative Effort by Oklahoma Association

PLANS for an ice cream week in the state of Oklahoma have been outlined by a committee from the Oklahoma Association of Ice Cream Manufacturers. Easter Sunday has been set as the date for the beginning of an ice cream week, in which dealers will be aided by the manufacturers in calling the public's attention to ice cream and its importance to human satisfaction. Easter Sunday falls on April 20th this year.

The campaign will not stop with just one week of efforts, however; the committee has enlisted the co-operation of virtually all the Oklahoma manufacturers in plans for the dealers to work special-flavor sales every week-end following the week of Easter until Sept. 1.

Copy for newspaper advertising, and other selling suggestions, will be furnished by the committee. Win-

dow streamers for special flavors will be shipped direct to the manufacturers upon receipt of orders by W. M. Hawk, Tulsa, secretary of the Oklahoma association. The estimated cost for these streamers (100 for each flavor) is about \$60, covering the entire campaign. The secretary believes an average of four streamers for each dealer will be needed, and in case more than two hundred are needed the cost will be \$2 a hundred.

This plan of co-operative selling, patterned something along the lines of the Southern California effort that has been such an astounding success, was adopted at a meeting of the committee at Muskogee. It is the first step of this kind ever taken in the South, and its outcome will be watched with much interest by manufacturers elsewhere in the country who have been considering means of promoting ice cream sales.

Greater Sales and Lower Prices Through Iceless Cabinets

Development of Industry Through Mechanical Refrigeration is Forecast by Manufacturers Who Have Tried Out New Cabinets

Interviews With Users

AUTOMATIC refrigeration has established itself in the ice cream industry for all time. That is the consensus of opinion gathered from discussion at the different conventions the past winter. The iceless cabinet will, to a certain extent, bring about revolutionary conditions in the handling of ice cream, and in the end will mean greater profits to the industry through enabling manufacturers to reduce the price and get their ice cream to the consumer in the best possible condition, thereby developing consumption. That is the consensus of opinion among manufacturers who have adopted automatic refrigeration.

In a survey of the situation regarding the iceless cabinet and its influence upon trade conditions, The Ice Cream Review has been in communication with approximately 200 manufacturers who were among the first to "try out" the new cabinet. Virtually every convention during the winter was marked by interesting discussions on the subject, but there has been no escaping the fact that ice cream manufacturers at large want to know something about what various men in the industry who have the automatic cabinet in use think of its present practicability and future possibilities.

A very encouraging note of optimism is sounded in the replies to the queries propounded by The Ice Cream Review, and while the opinion is generally shared that manufacturers should make every effort to rid themselves of the burden of increased investment by inducing the dealers themselves to buy the cabinets outright, it is recognized that it is through the ice cream manufacturer only that these new cabinets ever will be placed in the retail stores, though different plans may be followed for handling the costs.

In the convention discussions, leading members of the industry were quick to foresee that in handling the iceless cabinet, manufacturers should begin at the outset with the plan to make the dealer pay for the cabinets. Whether he pays or not, the convention speakers have impressed the belief that the effort should be made to have the dealer pay at least part of the cost of current and water.

All the dealers to take up automatic refrigeration who have written The Ice Cream Review are sure that it will promote sales and lessen the annoyance to the retailer through eliminating ice and salt, though all were not sure that it would enable manufacturers to work up chain stores especially fitted to handle ice cream, as has been done by an Ohio manufacturer.

THE experience of the White Ice Cream Co., Flint, Mich., leads its president, A. C. White, to believe that through mechanical refrigeration, the service charge can be reduced five cents a gallon after charging off twenty-five per cent depreciation.

"We were one of the first ice cream companies in the country to adopt the use of mechanical refrigeration," writes Mr. White.

"Naturally, before deciding on the use of mechanical refrigeration, which, we were well aware would cost us a lot of money before we were 100 per cent equipped,

we studied the situation from every conceivable angle using the experience we have had during the past twelve years in the wholesale manufacturing and distribution of ice cream.

"My personal experience has shown me that the average cost of maintaining ice cream in the dealer's store was from twenty to thirty cents per gallon over the twelve months, and for a long time I have looked forward to the time when this appalling amount could be substantially reduced, and after thoroughly examining the Nizer cabinet I found that this service charge could be reduced so as not to exceed five cents per gallon after charging off twenty-five per cent depreciation on the equipment and setting up a fair reserve to take care of mechanical service. This saving in itself was naturally sufficient to convince me that mechanical refrigeration was here to stay and that it would ultimately result in lowering the price of ice cream, thereby substantially increasing consumption.

"Our first move was to electrify or refrigerate all our stops on one rural route. I might say here that it was impossible to get delivery on mechanically refrigerated cabinets when we started in business, and therefore had to start out with salt and ice. The route I spoke of required the operation of a two-ton truck to carry the ice cream, which averaged between one hundred and one hundred and fifty gallons, about a ton and half of ice, and sufficient salt to refrigerate. After this route was mechanically refrigerated, we dispensed with the two-ton truck which required all day to make the route, which was about one hundred miles long, and put in operation a half-ton truck, put the ice cream in felt jackets and made the complete route in approximately half the time.

"It is, therefore, obvious that in addition to saving the difference in operation cost between the half-ton truck and the two-ton truck, we saved all the ice and salt and one-half of the operator's time each day. We also observed that the consumption of ice cream on this route substantially increased due to the fact that the dealer was in a position to offer his customers a very fine selection of ice creams, for they carried in stock at all times vanilla and three or four fruit creams, and further because the ice cream did not suffer the hardships it was subject to with salt and ice refrigeration, due to raising and lowering of temperatures.

"I might here state that I believe the average ice cream deteriorates ten per cent in quality with salt and ice refrigeration, while with mechanical refrigeration I have observed no deterioration whatever."

"THERE is some question on the part of ice cream manufacturers in the state of Michigan yet as to the best method to pursue in the installation of mechanical refrigeration," continued Mr. White. "Being one of the first manufacturers in the field to make installations of this kind we had no precedent to follow but proceeded on the theory that since we were giving ice and salt service to our rural as well as our city customers, and in view of the saving we were experiencing besides the potential possibilities of greater consump-

tion, we decided to install the cabinets free of charge, and also pay for the electric current necessary to operate same.

"However, since the use of mechanical refrigeration is becoming more general some of the ice cream manufacturers feel that the installation should be effected on a rental basis, with a set charge that would average \$12.00 per month for an eight-hole cabinet. However, we cannot concede the righteousness of this proposition while the wholesale price of ice cream remains the same and where material costs have not substantially increased. I might here state that the price generally charged for vanilla bulk cream in this territory during the past two years is \$1.20 serviced and fruit bulk cream \$1.35, with five cents a gallon higher on vanilla for rural service, other creams being the same as in the city.

"Some of my contemporaries who apparently are not sold on the idea of mechanical refrigeration use the argument that sulphur dioxide, the refrigerant that is generally used, is a dangerous gas and that inasmuch as the idea is only becoming generally in use that substantial developments will be made within a year or two that will make obsolete the equipment being sold at present. We are interested only in a cabinet that will keep our ice cream in the proper shape at all times and at a minimum cost.

"Our current cost during the past year has not exceeded \$2.37 for thirty-one days for an eight-hole cabinet and the cream has been kept in practically the same condition as when it leaves our hardening rooms. I, therefore, cannot see where any improvements can be effected.

"I am well satisfied that within the next two or three years seventy-five per cent of all the ice cream sold through dealers in the United States will be sold from mechanically refrigerated cabinets, even though there is a tendency at the present time by ice cream manufacturers in certain localities to refuse to accept the idea as fundamentally sound. The mechanically refrigerated cabinet, I believe, is the greatest contribution to the ice cream industry since the brine freezer and will play just as important a part from a quality and distribution standpoint as the brine freezer played from a quality and production standpoint."

* * *

The Hydrox Co., Chicago, believes the new cabinet will promote sales, writing as follows:

"Automatic refrigeration, we believe, will be of value in promoting the sale of ice cream through lessening the annoyance to the proprietor and dispenser. Annoyances of the ice and salt refrigeration are too well known to enumerate.

"However, believe that the ice cream manufacturer should steer his course more towards the perfection of automatic refrigeration in fountains, that can be produced and sold at a reasonable price; as its in the fountain that all of the work, dishing and serving ice cream, should be done to minimize the labor connection with it."

* * *

W. H. Bendfelt, president of the Bendfelt Ice Cream Co., Milwaukee, says the advantages of automatic refrigeration are numerous.

"We are enabled," says Mr. Bendfelt, "to handle ice cream which has heretofore been considered most perishable in a manner that relieves us of a large percentage of the grief we have had in this business, of which the principal item has been the care of our product while it is in the customer's hands. With automatic refrigeration we eliminate the great expense of ice and salt, much labor in the handling of ice and salt and a

Were You Surprised at your cost of Ice and Salt for 1923

NOW — while the season is
young should you determine
in favor of

Dry Zero Universal Ice Cream Cabinets

Your investment then won't be any larger but the saving you will realize in Ice and Salt will be like "velvet" in your pocket.

Furthermore—the Dry Zero Universal Cabinets will make a friend out of every dealer for you. **There** is something you can not figure in dollars and cents.

Your dealers will become friends because they will be able to realize full value on the ice cream they buy from you. There will not be the shrinkage.

There will not be the muss and fuss they probably now have to contend with. And,

Remember—if you do not help your dealers to make money on your product it is "good bye" dealer, and just so many more points of distribution must be won all over again.

Is it cheaper to win back dealers or establish new ones than it is to keep good ones satisfied? If a cabinet is the point of argument—a Dry Zero will settle it and besides, it will save dollars for you in Ice and Salt.

You can have a Dry Zero Universal Cabinet shipped to
you subject to your approval after full test at your plant.
Send for one and try it out.

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

Re-organization of Missouri State Association Planned

STEPS to re-organize the Missouri Association of Ice Cream Manufacturers have been under advisement for some time by different ice cream manufacturers in Missouri. The matter was taken up at a meeting of the North Eastern Missouri Ice Cream Manufacturers' Association at that body's annual convention, January 30. Resolutions were passed asking St. Louis and Kansas City manufacturers to co-operate in effort to organize a state association of ice cream manufacturers. Resolutions provide for the affiliation of the North Eastern Missouri Association with the state association should the latter be organized.

The Missouri Association of Ice Cream Manufacturers has not been active for the past few years. Conditions in the Missouri ice cream industry indicate that organization work is badly needed, according to the opinion of different members of the industry in that state. Matters of importance to the trade in North-eastern Missouri were discussed at the meeting at Moberly in January.

The meeting was called to order by H. M. Straub of the Moberly Ice Cream Company, president of the association. Mr. Vandiver of the White Eagle Dairy Co., Columbus, Mo., addressed the meeting. A better spirit of optimism than has existed among the manufacturers of that section for some time prevailed at the meeting. Delegates left the convention feeling that they had accomplished something.

Messrs. Staub and Vandiver were re-elected president and secretary-treasurer, respectively. The next

regular meeting of the association will be held at Mexico, in Aldrian County, February 22.

At noon the members were the luncheon guests of the Moberly Ice Cream Co. and the Weber Ice Cream Co.

LARGE NEW PLANT AT CINCINNATI TO OPEN SOON.

T. Russell Chapman, formerly with The French-Bros.-Bauer Co. of Cincinnati, has joined The Niser Ice Cream Co., Cincinnati's newest organization in this field, according to announcement to The Olsen Publishing Co. Mr. Chapman is widely known in the industry. He will be general manager and vice-president.

Officers of The Niser Ice Cream Co. are: Milton A. Mailender, president; T. Russell Chapman, vice-president and general manager; H. D. Hooge, vice-president; Henry Townsend, advertising manager and director of service.

The president, Milton A. Mailender, was manager of the Milk Exchange of the Cincinnati Chamber of Commerce for years; the director of service, Henry Townsend, was a member of the Townsend Dairy Co. for a long time, and the vice-president, H. D. Hooge, has been connected with the Matthews Selected Dairies of Cincinnati.

The Niser Ice Cream Co. has purchased The Lackmann Brewing Co.'s enormous properties on West Sixth Street. The remodeling, which is now going on, will be completed within a short time, and the new concern should be in production about March 1 to 15, according to the announcement.

Red Seal "Homo" Powder

Improves Ice Cream. It helps the Homogenizer by increasing the viscosity of the mix, assists in breaking up the milk fat globules and retains them in a fine and evenly distributed condition. Homo-Powder retains its jelling capacity at the homogenizing temperature, a property not possessed by gelatine. Use Homo Powder and be convinced. The cost is trifling compared with the distinct improvement that results.

Red Seal Ripener

Positive results. Ripens and thickens the batch by enzymic action. Required viscosity can be produced quickly or moderately slowly by regulation of amount of Ripener used. Do not let your batch stand too long in the old way without ripener, if you want to produce ice cream with a low bacterial count.

Red Seal Vanillas

All grades from best bean extracts to low priced imitations. You will save money and obtain satisfaction by contracting **now**. Contracts accepted for lots from 1 to 50 barrels.

Red Seal Certified Colors

Manufactured in St. Louis by the Warner-Jenkinson Company. All shades. Strong, pure, brilliant. Supplied in Powder, Paste or Liquid.

Red Seal American Cheese Color

Vegetable. Extra strong. Gives a true cream color to the mix.

Red Seal Extracts

Highest grade for ice cream flavoring.

Red Seal Milk of Orange

Ideal for water ices and sherbets.

Details of Panama and Cuba Trip Announced by National Association

Seventeen Days Cruise to Isthmus by Way of Havana
to be Feature of Conventions of National and
Southern Associations

Hotel Arrangements Announced

HOTEL arrangements and details of the trip to the Panama Canal, which will be a feature of the national convention at New Orleans next November, have been announced by N. Loewenstein, secretary of the National Association of Ice Cream Manufacturers.

The Panama trip will be a seventeen-day cruise to the Panama Canal by way of Cuba and return to New Orleans. Three days will be allowed for sightseeing at Havana, including launch trips to Morro Castle, Capannes Fortress and other points of interest. Four days

will be spent at the supply association, and President Harry A. Ben-
ners the Dixie Flyers.

THE National Association of Ice Cream Manufacturers, as related in previous issues of The Ice Cream Review, will meet at New Orleans, November 17, 18, 19 and 20 in connection with an exposition by The Association of Ice Cream Supply Men. The convention will be preceded by the annual gathering of the Southern Association of Ice Cream Manufacturers and the Dixie Flyers.

Officials and local advisers at New Orleans conference of National and Southern officials. Front seat:—At wheel, E. B. Geisel, manager, Anheuser-Busch Ice Cream Co., New Orleans; Opposite, W. W. Campbell, vice-president, National Association of Ice Cream Manufacturers; Rear seat, Roberts Everett, secretary-manager, Association of Ice Cream Supply Men; J. W. Clopton, secretary, Southern Association; N. Loewenstein, secretary, National Association.

are to be spent in the Canal Zone, where passengers will be provided with hotel accommodations at Cristobal or Panama City and at Taboga Island on the Pacific side.

There will be a trip through the Isthmus by auto and rail to Panama City. Opportunities will be afforded for the inspection of the locks, dam, spillway and control towers of the canal. Exceptional facilities for fishing, bathing and golfing are provided in the Canal Zone.

Rates for the 17-day cruise, including side trips as hotel accommodations on the isthmus, range from \$250 a person for state-rooms to \$800 for two persons in parlor cabin rooms. The passenger carrying capacity of the vessel is limited, and the secretary suggested that reservations be made early.

Details of the Panama trip were worked out at a conference at New Orleans, in January, of officials of the national and southern associations, the Dixie Flyers and The Association of Ice Cream Supply Men. Secretary Loewenstein and Vice-president W. W. Campbell represented the national association, Secretary J. Walter Clopton the southern, Secretary-manager Roberts Ever-

ett the supply association, and President Harry A. Ben-
ners the Dixie Flyers.

It was decided at the conference that the different groups to be represented at New Orleans be assigned hotels as follows:

National association, Roosevelt Hotel (formerly The Grunewald Hotel.)

Southern association, De Soto Hotel.

The supply association, St. Charles Hotel.

Dixie Flyers' headquarters, Monteleone Hotel.

This will be the national association's first visit to the South. Much interest has been created in the 1924 convention. Announcement of the Cuban and Panama trip in the February issue of The Ice Cream Review made ice cream men begin looking forward to the convention much earlier than generally is the case.

"The program committee will put forth every effort that the 24th annual convention may surpass all previous ones," reads the announcement by the National Association of Ice Cream Manufacturers. "You (members) are requested to advise the secretary of any subjects you want discussed. Very novel and interesting entertainment features will be provided."

The TAG-Hespe Feature is applied to MERCURY Thermometers ONLY

The TAG-HESPE Red Reading Column shows as a broad red line from the top of the mercury column to the top of the tube. When the mercury rises it covers more of this red line; when the mercury falls a correspondingly greater length of the red line is exposed. The decided contrast between this bright red line and the metallic grey of the mercury brings to the accurate mercury thermometer the easy readability of the red spirit instrument.

TAG-Hespe thermometer glass (tubing) is in every way similar to ordinary lens front thermometer glass except that in TAG-Hespe glass the BACK of the fine capillary bore (up and down which the mercury travels) is made of bright red glass. This red streak of glass extends all the way from the top of the thermometer down to the bulb. Note particularly that the red glass is in the back of the bore and NOT

at the back of the tube (see cross-section below).

The red line attracts the eye at first glance and it is easy to follow it down and take the reading at its bottom which is, of course, the top of the mercury column. The broad line of red stands out like a semaphore set at danger. You CAN'T miss it.

The TAG-Hespe Column is an EXCLUSIVE TAG feature. It is a RECENT improvement in thermometer manufacture which marks the greatest advance yet achieved.

Remember that the TAG-Hespe feature is applied to Mercury thermometers and that, therefore, there is no sacrifice of accuracy to attain this remarkable readability. Send for Bulletin O-911.

HORTON COMPANY ACQUIRES ANOTHER PLANT

Preparations have been made by E. B. Lewis of New York City, president of the J. M. Horton Ice Cream Co. to take possession by April 1st of the Nestles Food Co. Gouverneur, N. Y., which plant recently was purchased by the Horton company. This makes the fourth plant for the manufacture of mixes, including the Richville, N. Y., and two plants in New Jersey, operated by the Horton Co.

The Horton company has been in the ice cream manufacturing business since 1852. The Nestles plant is one of the most valuable owned by that company, having been entirely remodeled and modernized two years ago. The plant was purchased by the International Milk Products Company.

A. Broughner, superintendent of the country plants of the Horton company, will have supervision of the Gouverneur plant in connection with three others.

FINDLAY DAIRY CO. ERECTS NEW PLANT.

The Findlay Dairy Co., Findlay, Ohio, announces that its plans are complete for the erection of a new plant to take care of their milk, butter, and ice cream business. The main building will be 70 x 80 feet, one story, of brick and concrete construction. The company is equipped to handle 10,000 bottles of milk, 1,000 gallons of ice cream and 5,000 pounds of butter daily, officials say. The plant will be completed by May 1, officials say.

C. L. Parker is secretary of the company and the above information comes to The Milk Dealer from him.

ICE CREAM PRODUCTION LOW IN HAWAII.

Virtually the ice cream manufactured in the Territory of Hawaii is made from unsalted butter shipped from California, according to a report to The Olser Publishing Co., from Prof. L. A. Henke, professor of agriculture at Honolulu. He says the Islands' total output as reported by the two leading ice cream companies is 300,000 gallons a year.

"Hawaii is not essentially a dairy country. All the milk produced here is sold as whole milk for city consumption," Prof. Henke says. "The 1920 census gave the total milk production as 1,757,917 gallons for the year 1919."

WISCONSIN AND MINNESOTA PLANTS CONSOLIDATE.

The Schmitt Butter and Ice Cream Co., Winona, Minn., recently consolidated with the Tri-State Ice Cream Corporation, located at La Crosse, Wis. P. H. Schmitt, former part-owner, will continue as local manager of the Winona plant, which will be operated as a branch of the Tri-State Ice Cream Corp.

The Kemps Ice Cream Company, Minneapolis, Minn., a short time ago consolidated with the Crescent Ice Cream Co., St. Paul, Minn. Mr. Kammich will continue as manager of both plants.

You can't afford to miss a single copy of The Ice Cream Review. Did you send in your renewal?

NEW PLANT AT SEATTLE TO HAVE MILLION GALLONS' CAPACITY.

Early in the spring, probably about May, the Seattle Ice Cream Company will move into a new ice cream plant, located at 1501-03-05-07-09 Fourth Ave., Seattle, Wash., and when that happens another great institution will be added to the roster of modern dairy plants. The plant will have a capacity of more than 1,000,000 gallons yearly and in appearance, convenience and sanitary effectiveness will compete with anything in the country.

Just about three years ago F. V. Fisher purchased the Seattle Ice Cream Company and commenced a study of the ice cream business. Since then he has attended conventions everywhere, visited plants in every important city and painstakingly gathered facts and information about ice cream making which have now ripened into a new building and entirely new equipment in a new and more convenient location.

Every modern and proved device is being installed in the structure. A beautiful and inviting exterior, cleanly and attractive in architecture will prepare the visitor for a display of white tiled processing and freezing rooms, white woodwork and sanitary terazzo marble floors that would bring joy to the heart of any housewife.

In mechanical layout, the plant is fully abreast of the times, every process being arranged from start to finish so that the product follows natural lines of flow without duplication of work or unnecessary effort.

The hopper system of receiving from freezers has been installed, leading through silvered piping direct to filling and thereafter to hardening rooms, and a 70-ton ice plant is part of the equipment. The loading platforms, distribution of salt and ice and adequate space for ingress and egress are especially well arranged.

An entirely new departure will be a fancy ice cream department for the preparation of special confections and fancy molds. Eventually this department will be one of the show places of the new plant.

Special care has been given to providing comfortable and inviting quarters and accommodations for employes and, altogether, the institution reflects much careful study and thought on the part of the owner.

CAROLINA MANUFACTURER WINS JUDGMENT.

A North Carolina ice cream manufacturer recently won out in an extraordinary situation created when the North Carolina standard keeper taxed the manufacturer five cents a liquid gallon measure for testing his ice cream can equipment. G. E. Wilkinson, manager of the Chapin-Sacks Corporation, Salisbury, N. C., was told by the standard keeper that unless he made payment for having his ice cream can equipment tested, the case would be taken into court. Mr. Wilkinson made payment and himself took the case into court, asking for a complete refund of his money and for the cost of the court action to be placed upon the defendant.

This course he decided upon when the standard keeper could not show Mr. Wilkinson the law relative to testing ice cream cans providing for the fee covering same.

This case was tried in the county court at Salisbury, on January 21, and Mr. Wilkinson received judgment against the standard keeper for the full amount, which was \$94.20. The standard keeper stated that he was going to appeal to the Superior court, but later changed his mind and paid the full amount.

What Constitutes Quality?

Three Essential Factors are: Sanitary Factory, Raw Materials of Quality, and Correct Processing: Acid has Important Bearing—Variations in Composition Affects Quality. A Practical Discussion

Relation of Solids To Quality

By PROF. A. S. AMBROSE*

ALL manufacturers know there is some variation in the composition of ice cream. However, few realize the extent of these variations and their effect upon quality. Within the last few months we have made analysis of a number of samples sent to the university. The butterfat content of the samples has ranged from 8 to 17.5 per cent, milk solids not fat from 9.5 to 17 per cent and total solids from 31.5 to 42.5 per cent. Even the products of the same manufacturers have shown considerable variation from time to time. When such variations occur it is true that we may also expect to find as great variations in quality.

The Milk Solids in Relation to Quality.

The greatest variation in the composition of the ice cream mix usually occurs in the milk solids content. Sugar, gelatine and flavoring material ordinarily vary only within comparatively narrow limits. This being true, it would seem that the milk solids must have a definite bearing upon quality.

In our experimental work we have made a study of the relation of the milk solids to quality. In this study we have endeavored to answer the following questions.

1. What is the relative importance of the different milk solids?

2. Is there any definite relation between the amount of the different milk solids that should be present in the ice cream mix?

The milk solids are those obtained from dairy products. They consist of butterfat, casein, milk sugar, albumen, and mineral matter. For ice cream making purposes these are usually divided into two classes—butterfat and milk solids not fat, or serum solids.

In this study of the relation of the milk solids to

quality, mixes of twenty different compositions were used with variations as follows:

Butterfat, 8 to 14 per cent.

Milk solids not fat, 6 to 18 per cent.

Total milk solids, 14 to 32 per cent.

Twelve per cent sugar and one-half of one per cent gelatine were used in all of the mixes.

The mixes were not homogenized.

Samples were taken from each batch of ice cream for judging purposes. Each lot was examined three times. In all, 150 samples were examined.

The samples were judged for body, texture, resistance, and flavor. The terms used to describe these qualities were:

Body	Texture	Resistance	Flavor
Light	Very coarse	Lacking	Cleanliness
Good	Coarse	Good	Condensed
Heavy	Smooth	Too much	Lactose
Soggy	Very smooth		Old or stale
			Rich

Relation of the Milk Solids Not Fat to Quality.

A summary of the criticisms of the 150 samples is tabulated in table 1.

Table 1.

Relation of the Percentage of Butterfat to Texture, Resistance, Body and Flavor of Ice Cream.

Series A.

Percent Fat	Percent M.S.N.F.	Texture	Resistance	Body
8	6	Very coarse	Lacking	Light
8	10	Coarse	Lacking	Light
8	12	Coarse	Lacking+	Light+
8	14	Smooth	Good	Good
8	18	Very smooth	Good+	Heavy

Series B.

10	6	Very coarse	Lacking	Light
10	10	Coarse	Lacking	Light+
10	12	Coarse+	Good	Good
10	14	Smooth	Good	Good+
10	18	Very smooth	Too much	Heavy

Series C.

12	6	Very coarse	Lacking	Light
12	10	Coarse	Lacking	Light+
12	12	Smooth	Good	Good
12	14	Smooth+	Good+	Heavy—
12	18	Very smooth	Too much	Soggy

Series D.

14	6	Very coarse	Lacking	Light
14	10	Coarse	Good—	Good—
14	12	Very smooth	Good+	Heavy
14	14	Very smooth	Too much	Heavy—
14	18	Very Smooth	Too much	Soggy

An examination of this table shows that all the ice cream containing six per cent milk solids not fat had very coarse textures, were lacking in resistance and light in body. In each case the ice cream was badly churned. Those which contained 18 per cent milk solids

ELECTRIC MOTOR TRUCKS

Compare Your Truck Costs with These Figures

AN average unit of the Hendler Creamery Company's fleet of C-T Electric Motor Trucks was operated over a period of four years at an average cost of \$1,029.00 per year or a daily cost of about \$3.75, figuring 275 operating days a year.

This cost includes all repairs to chassis and body, cost of current and fixed charges such as interest, insurance, license, taxes and garage.

If you keep accurate records of your delivery costs, you can compare your own costs, over a period of years, with those of the Hendler Creamery Company. Can you operate your trucks for anything like \$3.75 per day, figuring your body and chassis repairs?

Let us send you a copy of Mr. Hendler's own statement giving figures on each item of cost from 1920 to 1923 inclusive.

Here is what Mr. Hendler says about his C-T Electric Trucks: "We are glad to

say that all of our C-T Electric Trucks have proved very satisfactory and on the low mileage routes have been much cheaper and more dependable than gas trucks or horses, besides being cleaner."

Many successful Ice Cream Manufacturers are using fleets of C-T Electric Motor Trucks for their short haul and city deliveries because they are cheaper and more dependable and cleaner.

A few of the more recent orders from the Ice Cream Industry include: Max Tauber Sons, Absopure Ice Cream Co., Chicago; McBride Bros. & Knobbe, Chicago; H. L. Newman Co., York Pa.; Superior Ice Cream Co., Baltimore.

Ask for audited Gould Reports on C-T Electric Trucks in the service of Ice Cream Manufacturers.

not fat, or the other extreme, had very smooth textures and too much resistance, while the body was either heavy or soggy. Between these extremes there was a more or less gradual change in the qualities as the percentage of milk solids not fat was increased. This difference was apparent in each one of the four series, even though each succeeding series contained an increased butterfat content. Churning did not take place in the ice cream containing 10 per cent or more milk solids not fat.

THE data indicate that a certain amount of milk solids not fat is required to produce a desirable texture, resistance and body regardless of the amount of butterfat present. The milk solids not fat serve also as a protection to the butterfat, when present in sufficient amounts, and thus prevent churning.

Table 11 illustrates the effect of the milk solids not fat upon flavor and upon the occurrence of "sandiness" in the ice cream.

Table 11

Criticism	Milk-Solids-Not-Fat				
	6%	10%	12%	14%	18%
Lactose flavor	0.	0.	25.00	75.00	44.40
Condense flavor	0.	16.66	12.50	58.33	55.55
Sandiness	0.	8.33	12.50	58.33	77.77
Per cent lactose calculated..	3.21	5.23	6.36	7.29	9.38

The freshly frozen ice cream had very fine flavor. The flavors shown in the table developed while the ice cream was in storage.

The ice cream containing 6 per cent milk solids not fat did not develop any of the flavors shown and did not become "sandy." The 10 and 12 per cent products rarely developed condensed or lactose flavor. These flavors,

however, frequently appeared in the ice cream which contained more than 12 per cent.

A "sandy" condition almost always developed following the appearance of the lactose flavor. Sandiness occurred most frequently in the ice cream which contained more than 12 per cent milk solids not fat. From the calculations of the average amount of lactose in the different mixes, as shown in the different tables, it would appear that, to avoid danger of sandiness, it is best to have mixes of such composition that they will not contain more than 6 per cent of lactose.

Relation of Butterfat to Quality.

The effect of butterfat upon quality can be seen by referring again to table 1.

The ice creams which contained 6 per cent milk solids not fat were not improved by an increase in butterfat; the criticisms were the same in the 8, 10, 12 and 14 per cent butterfat products. This was also true of the ice creams which contained 18 per cent milk solids not fat, and 8, 10, 12 and 14 per cent butterfat. In only one case was there any improvement in quality with an increased butterfat content in the 10 per cent milk solids not fat products. However, in the 12 and 14 per cent milk solids not fat ice creams the quality changed with each increase in the percentage of butterfat. Thus the data indicate that a certain amount of milk solids not fat must be present before the butterfat has any appreciable effect upon the texture and resistance. When there is a sufficient amount of milk solids not fat an increase in the amount of butterfat produces the same effect as an increase in the milk solids not fat. In other words the two have a complementary value within certain limits. A low milk solids not fat requires a high percentage of butterfat to produce a smooth texture and good resistance. A low butterfat content requires a high percentage of milk solids not fat to produce the same results. This is shown in table 1.

Eight per cent butterfat requires about 14 per cent milk solids not fat.

Ten per cent butterfat requires about 12 to 14 per cent milk solids not fat.

Twelve per cent butterfat requires about 12 per cent milk solids not fat.

Fourteen per cent butterfat requires about 10 to 12 per cent milk solids not fat.

The butterfat content is probably of greatest importance in relation to flavor. The increase in butterfat gives a richness of flavor which can be obtained in no other way.

Conclusions.

FROM the results here presented the following conclusions can be drawn:

1. The milk solids not fat are more essential than the butterfat in their effect upon body, texture and resistance of ice cream.

2. A high percentage of milk solids not fat (more than 12 per cent) is conducive to a condensed milk or "lactose" flavor where condensed milk is used to supply the milk solids not fat.

3. Ice cream containing more than 6 per cent lactose may frequently develop sandiness.

4. Butterfat is more important than the milk solids not fat from the standpoint of flavor.

Relation of Milk Solids to Quality Ice Cream.

COMPOSITION is only one of a number of factors which must be considered if we are to improve quality.

VANILLA PRODUCTS

119-121 North Union Ave., CHICAGO, U. S. A.

Some manufacturers use milk powder and butter in preparing the ice cream mix, others prefer to use some form of condensed milk, while still others prefer the prepared mix. In this connection the question naturally arises, "Will ice creams having the same compositions, be alike in quality when made from different milk products?" Stated in another way, "Will the milk products from different sources have the same value as far as quality is concerned?"

Previous experimental work has brought out the fact that there is a difference in quality of ice creams made from superheated and unsuperheated condensed milk. At present we are making a study of the value of milk solids from several sources. So far this work indicates they are not of equal value in this respect.

Ice cream prepared with bulk condensed milk, sweetened condensed milk, evaporated milk and milk powder are being compared. In some cases the score on texture has varied as much as five points while the score on resistance has varied as much as two points. There are also differences in flavor. The work, however, has not progressed sufficiently to permit us to state definitely which source of milk solids is most satisfactory from the quality standpoint.

Relation of Homogenization to Quality.

THE experimental work upon the relation of milk solids to quality was carried on with mixes which had not been homogenized. The homogenization process has an effect upon the milk solids which influences quality. Since a great many manufacturers are using this process it seems advisable to consider it in this connection.

In order to observe the influence of homogenization,

mixes were prepared and divided into equal parts, one of which was homogenized. The scores given for the ice cream are shown in Table III:

TABLE III.

Effect of Homogenization Upon Texture and Resistance.

Texture.	Perfect Score	Resistance.	Perfect Score
Homo- genized	25	Homo- genized	15
23.5	23.0	15.0	15.0
21.5	21.5	13.5	12.75
20.0	18.0	13.5	12.0
22.5	20.0	14.25	13.5
23.5	16.5	15.0	11.25
23.0	15.0	14.25	9.75
22.5	16.0	12.0	10.0
22.5	22.0	15.0	14.75
23.5	22.5	15.0	15.0
22.0	21.0	15.0	14.25
22.0	20.0	13.5	12.75

The homogenized mixes were given a higher score on texture and resistance in almost every case. The average difference in score on texture was 2.6 points, and on resistance about 1.5 points. The results show very plainly that homogenization improves the texture and resistance of ice cream.

The homogenized products in nearly all comparisons gave the impression that they contained more milk solids than the unhomogenized products. This means that where the ice cream mix is homogenized it is not necessary to use as much milk solids not fat as would otherwise be necessary. We have also found in this study that the temperature and pressure employed in the process of homogenization made considerable difference in the texture and resistance of ice cream. We hope to work out the relation of these last factors more definitely during the coming year.

When we consider the relation of the milk solids to quality and the number of factors which influence this relation it is not difficult to understand why so much variation is found in the quality of ice cream.

Better Ice Cream

By W. A. SCHWINDELER*

THREE essential factors are necessary to make "better ice cream." First: A good sanitary factory is necessary, a factory that is modern in every respect. It must be clean, sanitary and workable. By workable I mean that there should be no overlapping in the handling of the product. Equipment and interior arrangement should be such that the raw material should come in at one place and continue through its various phases until the finished ice cream reaches the hardening rooms, with plenty of hardening room space so that the ice cream made today will not be sent out for at least twenty-four hours after its manufacture.

Aging vats capable of holding the mix for twenty-four to forty-eight hours are also essential. The floors of the factory should be so constructed that they will drain easily so that the workmen don't have to wade around in water the biggest part of the day. Arrangements of this sort cost no more than slip shod methods and have a tendency to keep the workmen better satisfied with the conditions in your factory. All equipment should be such that it can be cleansed easily with hot water and live steam, and this should be done daily, so that no contamination will occur either to the flavor or to the healthfulness and purity of the mix.

AMONG THE BRIGHTEST THINGS IN THE REVIEW ARE THE ADS—READ THEM.

SECOND: The raw material must be of excellent quality. In the larger cities the trouble of getting fresh milk and cream is not experienced as much as in the smaller places. In the small towns and cities much of the sweet cream and milk is bought direct from the farmer. If such is the case it is well to learn just what kind of a dairy farm your cream is coming from. Find out if the dairyman is careful in the handling of his milk, if he has the proper facilities for cooling his product immediately, if the cans are clean that he puts your milk and cream into, and as a further precaution, I would want to know if his herd is tuberculin tested. I would go out to his place and talk to him and let him know that I was very much interested in all that he is doing as regards the handling of the milk and cream that he produces.

This may seem like a lot of work and trouble, but I assure you that it pays big dividends both for you and the dairyman, and you will be agreeably surprised how easily he will be influenced to making improvements in the handling of this product, especially when he finds that it means the highest price for good sweet cream, and the ice cream manufacturer does pay the highest price for good material, and at a time when usually the market is at its lowest.

In this connection, I maintain that better ice cream can be made from sweet cream and sweet milk as a base than can be made from a re-constituted product made from butter, powder and water. Very often the quality of the butter is such that a good, uniformly flavored ice cream cannot be made from it.

Extreme care must also be used in the quality of your gelatine, flavors and fruits. A good ice cream can easily be ruined by using unwholesome gelatine or ice cream powder, a poor flavor, or so-called cheap fruits. The very best that money can buy is only good enough

to make "better ice cream." Be very careful of your condensed if you use it. See that it is all that the manufacturer claims it to be. Be equipped to make your own tests for solids and fats, and be sure and standardize your mix, then you will not have an ice cream that is good today and not so good tomorrow. A uniform ice cream with the right amount of butterfat and solids, good gelatine and a pleasing flavor, made in the right way in a sanitary factory, is surely "better ice cream."

Ice cream to be the better kind must have solids not fat and milk fat solids in proper balance. We know that it should contain about one-half of one per cent of the best grade of gelatine, and that as high as fourteen per cent of good cane sugar is not too much to use. We also know that a mix containing sweet cream, sweet milk, sugar, gelatine and flavor does not contain enough serum solids to produce a "better ice cream." This is especially true if a manufacturer wants to produce an ice cream, say, of thirty-five per cent total solids and ten per cent of butterfat. In making this sort of a mix you will find that an addition of close to five per cent in weight of milk powder will give you just about the right total solid content.

Of course, condensed can be used, and is used in a lot of cases, to increase the solid content, but sometimes condensed is not as easily obtained as milk powder. Also please bear in mind that "better ice cream" should not be loaded with gums and improvers to get the effect of a high solid content. Gums and improvers are helpful in their respective places but are not a substitute for milk solids.

THE third consideration is just as essential as the other two, namely, correct processing. By that I mean thorough pasteurization followed by homogenization, either through an homogenizer or viscolizer. I do not believe that nearly as good results can be obtained in running the mix through any other kind of machine. The homogenizer or viscolizer has a tendency to break the fat globules with the result that by cooling immediately and then the proper aging of the mix at the right aging temperature you produce a "better ice cream" than could be produced without following the above method. Personally, I believe the entire mix should be run through—that is, everything but the flavor. Do not try to incorporate too much air in your ice cream, for a good mix can be ruined through too much overrun.

All of these factors, with the possible exception of the second, can be generally applied to any ice cream factory. In some sections of the country it is impossible to secure the sweet cream and sweet milk that can be procured in this vicinity, and ice cream factories in

Draw out more Profit!

Just a few dollars more profit drawn out with every batch rolls up the profits rapidly.

The wisdom of an investment in new freezers depends not so much upon how much or little money you put into the new equipment as *how much you take out of it*.

Since the pioneering days, leading ice cream makers have been dumping daily dividends out of their Emery Thompson brine freezers into the cash registers.

EMERY THOMPSON BRINE FREEZERS

In about 40 seconds the frozen cream is emptied into waiting cans through the big slide gate. Shut the gate.

The waiting batch is exactly right. It has been measured to the drop by an automatic device. Open the 4-inch cream valve. It pours the delicious mixture—12 seconds!

Fruits, flavors and syrups are dumped into the big new hopper above the cream inlet valve. No slopping, no delay, no waste.

Notice the breather tube—one of a pair. Big yield comes from free air circulation made possible by these tubes. And the frozen cream is emptied faster.

We've just touched some of the improvements. The fundamental construction is the same. Prices mailed promptly on request.

EMERY THOMPSON
MACHINE & SUPPLY COMPANY
271-275 Rider Avenue New York City

those places must be extremely careful in the purchase of fresh, nice flavored butter, and to use with it milk powder or condensed milk which is of exceptional quality.

In conclusion I want to state that I believe it is possible for every manufacturer of ice cream to make

better ice cream. Use the very best materials, have the proper kind of equipment and quit worrying. Apply the "Golden Rule" to your customers, to your business and to your employes. Remember. Today is the tomorrow you worried about yesterday, and the things you worried about didn't happen.

* * * * *

The Quality of Ice Cream

By P. S. LUCAS*

PERHAPS more attention is given at the present time to the marketing of ice cream than to the technical difficulties associated with its manufacture, but it must be obvious that an inferior article will be marketable only in a very limited field. Marketing is a tremendously important problem; quality is equally important. Neither can be long neglected where competition exists and certainly it exists in the ice cream industry, perhaps to too great an extent. Ice cream has by no means reached its golden age of perfection.

Materials.

Quality begins with the raw materials used. Cream must be sweet, at least below .25 of one per cent acid. Cream that has been neutralized either before or after being compounded with the other ingredients is unfit for use. Substitute fats should not be tolerated. The stand of the National Ice Cream Association and several state organizations on this point is most commendable. There is no surer way of besmirching the good name of this product than by such methods. The public, unquestioningly paying for an unadulterated product, should be amply protected from such unprincipled practices. If homogenized cream is used in part or entire, its quality will be highest when a good grade of readily soluble powder and good sweet butter are used. Cream and milk may be protected by immediate pasteurization after its receipt. Freezing has very little effect on the resultant ice cream, provided the mix is homogenized or viscolized later. Otherwise a tendency to meanness may be observed.

Cane or beet sugar serve equally well as a sweetener for ice cream. Sugar substitutes have varying effects. Invert sugar and corn sugar most closely resemble cane sugar. Most of the bitter taste so noticeable in the war time corn sugar has been eliminated by modern methods

* Associate Professor Dairy Manufacturers, Michigan Agricultural College.

of manufacture. Overuse of glucose gives a disagreeable fatty taste; overuse of Karo adds a bitter taste; while too much honey gives a piercing sweetness that the public will tire of. Maple syrup is so expensive that it is hardly to be classified as a substitute sweetener. William's experiments at the U. S. Department of Agriculture would indicate that the public appreciates a higher per cent of sugar than it is getting. The preference, as he reports it is 19 per cent; whereas the common per cent incorporated is fourteen. Solids are cheaply increased by such an amount, but overrun is lowered.

Gelatine is a much discussed article especially as regards its bacterial content. There is scant experimental data on bacterial standards for gelatine. It does sound reasonable that a gelatine of low bacterial content and good jellying properties is ideal. Liquifying and gas producing organisms arouse suspicions as to quality of materials used in its manufacture or as to its method of manufacture. To test these, boil several test tubes and cups, make up a two per cent solution of each sample to be tested, fill the test tube half full, plug with sterile cotton and allow to stand at room temperature a couple of days. Some will not congeal at all. These have poor jellying properties. Others will break down quickly and become liquid again. These contain liquifying organisms. Those which develop air pockets throughout the mass are contaminated with gas producing organisms. Certainly gelatine must be tested if an ice cream manufacturer is desirous of producing a cream low in bacteria.

There are flavors and flavors. Straight vanilla is more popular in the North; a vanilla with some Tonka is more popular in the South. It is waste of money to buy a very cheap grade of vanilla. True fruit extracts where available, are desirable. Many of these are still in the process of development. Others, which have been produced, are too expensive to be commercially practical.

The Ice Cream Mix.

A mix made of good materials may be so improperly compounded and handled that a poor quality of ice cream will result. The ingredients of the mix must bear a definite relationship to each other. Butterfat smoothens ice cream. This effect is accentuated by homogenization. If the homogenizing valve becomes scored, as they do, thorough homogenization does not take place. All materials in the mix except flavor should be pasteurized. We have so far been unable to detect experimentally any difference in ice cream containing gelatine which has been pasteurized separately or gelatine pasteurized with the mix. Excessive heating of gelatine causes it to lose its jellying powers. This critical point is 165 degrees F. We believe the best way of adding gelatine is as follows: add the milk, cream and condensed to the vat and start pasteurizing. Mix the desired amounts of gelatine and skimmilk powder thoroughly with the sugar. When the milk has reached a temperature of 90 degrees F., add the sugar mixture and pasteurize as usual.

The milk solids of an ice cream mix (not fat) are extremely important. These include that portion of the milk products used excepting fat. These help control the viscosity or stickiness of the product. Unpublished experimental data at M. A. C. indicates that swell incorporated in ice cream, is directly dependent on its non fatty milk solids. These may be regulated by rearrangement of the ice cream formula. An excess of milk solids may result in sandiness; too small amount causes soginess. From ten to eleven per cent is regarded as the ideal amount. Sufficient milk solids not fat, assist materially in retention of overrun, once it is incorporated. Creams, low in these are apt to develop air pock-

ets or to sink in the can while held in the hardening room.

Granular ice cream is characterized by the presence of icicles in the ice cream. It is caused by rehardening melted or partially melted ice cream. Cream subjected to heat shocking will commonly develop the defect. The common practice during warm months of running freshly frozen cream into cans which have not been cooled will cause the defect. The viscosity of the mix is destroyed by the melting, and in refreezing, the water freezes first into needle like icicles.

There is also the question of excessive swell in ice cream. The least said, the better, provided manufacturers will keep this to a reasonable limit. Already it has led to advocacy of ice cream sales by weight. Assuredly this will come unless ice cream men through their associations and as men having the good of the industry at heart take definite action. Swell incorporated may be increased as solids are increased.

Buttery ice cream may be caused by the freezing of a partially churned mix or to churning the mix in the freezer. Creams testing 12 per cent fat or over are very easily churned. Homogenization reduces this danger. Freezers run at too high speed may also cause it. A common cause is the freezing of a warm mix. A mix should be precooled to 40 degrees F. or below.

Freezing a mix too rapidly causes it to be coarse because the air cells are large and not uniformly distributed. Cans of cream from mixes known to contain required amounts of fat often test low when samples are taken by the inspector. This is more common in those factories which age their cream in vats not provided with agitators. Such mixes should be stirred often during the time it is being drawn into the freezers. A mix standing in a vat may vary in the composition of its top and bottom layers as much as 5 per cent in fat.

No attempt has been made to cover color and package defects. They are easily remedied. Many defects of flavor, body, and texture have been omitted. The more important, however, have been discussed. Quality products are sought after and happily may be attained in ice cream, without at the same time being so expensive as to make selling prices prohibitive.

* * * * *

Food Value and Use of Ice Cream

By J. M. FULLER*

WHEN I was a boy I went to a country school known as Fairview Number 3. It was customary at the end of the spring term on that gala day known as the last day of school, to have a picnic. The high light of the occasion was the moment when the ice cream freezer was opened and the contents apportioned for consumption. From the standpoint of some of you who are making ice cream containing 14 per cent or 15 per cent or 16 per cent butterfat, the ice cream served at Fairview Number 3 would have been lacking in total solids and in fat. However, such details as fat content, total solids, and food value, did not bother us boys for we were sold on the idea of ice cream. If the adult population of New England could and would consume ice cream in the generous quantities consumed by the boys at our school picnic, then there would have to be a tremendous expansion of factory facilities to take care of the demand.

Why mention Fairview Number 3 and the school picnic and its simple supply of home-made ice cream?

The English Have Their Tea!

At that "fatigue" hour of the day when the worker's spirit droops the English firm serves tea—it's a national institution. In America at any fatigue hour, the thought is ICE CREAM, but how to handle it is the question, and the

PURITY PAPER CANS

has been the answer to the question since 1909:

You can make possible a greater volume of ice cream business by having your dealers cater to the carry-out sale. It makes no difference whether it is in the downtown office trade or the carry home trade of the residential districts—the convenience of the PURITY PAPER CAN is immediately recognized and appreciated. And in the smaller sizes the container acts as the dish!

Here's what one ice cream manufacturer thinks about it:

"We have under consideration the matter of selling PURITY PAPER CANS to our dealers. We have for a number of years handled the wire handle pails but are considering a change so we can be of more service to our dealers along this line. Please send us samples and price information."

(Quoted from a letter recently received at our office)

If you are interested in increasing your dealer's sales, supply him with PURITY PAPER CANS. You can handle each sale with a profit.

Samples and prices on request.

ALL SIZES FROM ONE-QUARTER PINT TO HALF-GALLON

The Purity Paper Vessels Company

BALTIMORE, MARYLAND

Also makers of the famous line of PAVESCO Paper Milk Bottles.

WHAT ABOUT EQUIPMENT FOR SPRING AND SUMMER—READ THE ADS.

Because it illustrates the appeal that ice cream makes. Beyond this appeal, however, is the question in the minds of many as to whether or not they can afford to indulge their desire for this delicious dairy product. This question is doubtless inherited from the time when ice cream was a rarity and indulged in only upon rare occasions. Then it was regarded as a luxury. Many people would, therefore, feel a little easier if they realized that in buying ice cream they are buying not only palatability but high food value as well.

In New York City are a number of well and favorably known places which each day serve luncheons to hundreds of young women. Some are short, some are tall, some are thin, and some are fat, but they all make ice cream the piece de resistance of their luncheons. Some may criticize these young women for spending their money for ice cream when they might better spend it for a cheaper and more substantial food. Are the young women right or are the critics? Perhaps this question can best be answered a little later.

Apple pie a la mode tickles the palate and fills a considerable space, but what has the young stenographer whose luncheon consisted of that delectable combination of edibles, plus a glass of milk, to show for her money? Now while such a combination is not recommended as a sole diet, the stenographer is in fact more sensible than most people realize, for her simple but delicious luncheon contained food value sufficient to meet almost one third of the total food requirements of her body for one day.

Reference to the table of calorie values shows how favorably ice cream compares with other foods in its class. For example, an average serving of ice cream, or $3\frac{1}{2}$ ounces, contains approximately the same calorie value as the same weight of round steak, or roast chicken, and considerably more calorie value than fish such as haddock or cod. It is evident that the young women mentioned in a preceding paragraph are spending their money wisely when they buy ice cream.

Some may say that calories do not provide a fair basis of comparison because recognition must be given to the following:

1. We need protein, carbohydrates, and fat in right proportion and in sufficient quantity.
2. We need certain minerals.
3. The quality of protein must be considered.
4. The vitamins must be present in adequate amount.

Ice cream containing 10 per cent fat has approximately 5 per cent protein, 18 per cent carbohydrates, and .8 per cent minerals. As a sole article of diet ice cream can hardly be recommended. Neither can such foods

as roast beef or cheese or eggs. The justification for using calories as a basis of comparison is that ice cream is one food of a number that should go to make up the daily diet. When the daily diet contains a reasonable variety of foods, the various requirements as to quanti-

"GMC trucks are seven steps ahead"

GMC Widens the Hauling Range

Of special interest to dairy companies is the extra wide range of hauling service possible with GMC Trucks. Through the famous GMC Two-Range Transmission with which all GMC Trucks of two-ton capacity and over are equipped, GMC has a surplus of power that will carry a full load over bad roads and up steep hills impassable to other trucks. Nor does this extra power interfere with high road speed or add in any way to the cost of operation. You can haul profitably with GMC wherever wheels can get traction.

The full story of GMC Trucks, complete detailed description of their exclusive features and an explanation of the way these add to GMC earning power and cut operating cost are given in the illustrated booklet "Seven Steps Ahead". A copy of this booklet is ready to mail to you. Fill in the coupon below. Send it in today and your booklet will be forwarded by return mail.

ADVERTISING PUBLICATION PLAYS UP SUPPLY ASSOCIATION.

Judicious Advertising, a publication of the general type of Printers' Ink, Advertising Fortnightly, etc., in a recent issue carries an article by Marshall D. Beucler on "An Industry which Realized the Urgent Need of Teamwork in Stimulating Consumption."

The article, while placing its emphasis upon ice cream and work in behalf of the ice cream industry by The Association of Ice Cream Supply Men, considers in one category, for the purpose of its discussion, milk products in general, whether ice cream or otherwise, and the keynote is sounded in these sentences: "More and more advertising of milk and its products is being undertaken by those who don't sell milk or its products. The ice cream supply and equipment men have realized in a new way how dependent an increase in their business is upon the increase in the retail purchase of ice cream and milk. Since a short time ago this realization has expressed itself in several directions."

The article goes on, in referring specifically to ice cream: "One of these manifestations is the joint convention and exposition conducted by the National Association of Ice Cream Manufacturers and The Association of Ice Cream Supply Men at Cleveland, Oct. 22-23, when more than 4,000 persons assembled. The manufacturers of ice cream conducted the convention and the supply men supervised the exposition."

Whatever the supply men can make or do which will augment the consumption of ice cream will naturally satisfy the producer, who will then be obliged to buy additional equipment from the supplyman. In a sense the supply or equipment man has to blaze a trail to reach the consumer and to provide the creamery man and ice cream manufacturer with devices to meet increased consumption or devices to create indirectly increased consumption."

The article says further: "Only a small amount of ice cream used to be sold in winter. Many manufacturers therefore took their vacations when the snow began to fall, never being hopeful of a winter ice cream market."

"But recently through advertising by ice cream manufacturers and equipment men, the public has been made to realize that ice cream is a food, and an excellent dessert which is just as healthful and palatable in one season as another."

"The supply and equipment men act upon certain fundamentals, so simple that they are almost trite. One of them is this:

"That nothing so increases the stature of a buying field and at the same time develops good will in it for the seller as constructive, intelligent assistance to and interest in that field by those who sell it its essential equipment."

"The Association of Ice Cream Supply Men, for example, today promotes and manages educational exhibitions for ice cream manufacturers. It regulates the business practices of its members in accordance with a fair practices code, in the interest of the buyer in particular and ethical business in general. It promotes publicity concerning the ice cream industry, designed to give greater prestige and dignity to it, and to acquaint the public with its scientific status, its financial scope and its food importance."

"It has contributed \$5,000 to an expected establishment of an industrial laboratory by the National Association of Ice Cream Manufacturers. It constantly seeks to increase the membership of the ice cream manufacturers' associations. It co-operates in a dozen other ways with individuals and with representative organizations in the ice cream industry."

"What About Food Vitamines?"

By S. J. VAN KUREN*

WE hear considerable these days in regard to food vitamines, particularly those found in milk, which are often mentioned in trade journal articles by medical officials, dairy scientists and others. We hear of it occasionally in papers read before conventions, and also quite extensively in advertising.

All authorities seem to agree that Vitamine C is the only vitamine found in milk that is destroyed by pasteurization, and if I am correctly informed, (my authority is the National Dairy Council, whose information is derived from the research work and reports of the most prominent dairy and medical authorities, as well as the results of investigation and experiments carried on by their own very efficient and capable corps of nutrition workers) Vitamine C is found in only the minutest trace in cows' milk.

This vitamine does not exist in sufficient quantities to be of material benefit in the diet, and according to the above mentioned authorities, this explains why medical men prescribe and recommend acid fruits such as grape fruit, orange juice and the like in combination with milk as a diet for infants and invalids.

It is my recollection also that this vitamine is found to a considerable extent in leafy vegetables, but, however that may be, it appears only in such small measure in milk that whether or not it is destroyed is of no consequence whatever to the human diet. It is also agreed by all authorities that this Vitamine C is the only known food element found in cows' milk that is destroyed by pasteurization. Therefore, the only reference ever made to this as an objection to the pasteurizing process is on the part of enemies of pasteurization, and those totally uninformed.

When the above point is raised in any discussion of the merits of pasteurization, it is well for all of us to know that any one who is using that argument for the purpose of discouraging the use of pasteurized milk, in connection with comparative merits of different pasteurizing systems, it is being used only as a talking point in the hope that it may have some effect upon the minds of those who are not fully informed in the matter, and while the statement that pasteurization does destroy this particular food vitamine is very true, it is very misleading to the layman if further facts in the above connection are withheld.

COLONIAL'S NOVEL BRICK PACKAGE.

The Colonial Ice Cream Company of Philadelphia is using a very novel brick package, which was described in an issue of the Bestov Lactonews, the house-organ of the Cherry-Bassett-Winner Co., Philadelphia.

The box is described as the regular paraffined, three-color box, with an illustration of the company's trucks arranged in sections in such a way that by cutting away the side of the box and fitting together certain corners a paper model of one of the C. M. C. trucks is formed. This is used instead of the conventional design. Two driving wheels are obtained from the side panel which is cut away. These wheels can be inserted under the truck, making it run like a regular toy automobile.

Play Safe!

The worst sort of false economy is the purchase of poorly made brick tanks and brick slabs. Leaky tanks and slabs of incorrect capacities (either from bulging, or because slight attention has been paid to uniformity of sizes) cause more losses of actual profits in a month than many times the slight differences in price between such equipment and Bestov ware.

We don't claim that Bestov tanks and slabs are the best just because we make them. There are mechanical reasons which prove it. The new Bulletin 2307 explains; gives specifications and prices. Get a copy!

Building Winter Consumption

Suggestions for Defeating "The Winter Thief" that Robs Manufacturers of Summer Profits. Says Eskimo Pie is a Solution.

By W. J. SHEEHAN*

IN MY judgment the milk and cream business, if conducted successfully, demands location, experience, and a large financial outlay in equipment. Also it is a business separated from the ice cream business in many ways. The Charlotte Russe is fairly successful, if you happen to have a surplus of cream and are located in a large city that can and will consume your supply. The box sundaes will never be a pronounced success on account of the great difficulty in shipping them profitably, the small returns in money to the makers, and the fact that this product comes into competition with the college ice trade of the dealer. The candy business positively cannot be conducted in conjunction with the ice cream business, inasmuch as it begins early in the fall and continues into late in the spring and requires almost an entire crew of men in which your surplus ice cream help cannot be used profitably.

Because of these conditions it was no wonder that the ice cream man was stampeded when the Eskimo pie was first introduced. You recall the wild hysteria of insane buying which ensued, running from a small inexpensive pan to a costly enrober, and including wrappers by the million. Conditions now have become

* An address before the New England Ice Cream Manufacturers' Convention at the Copley Plaza Hotel, Boston, 1924.

stabilized, and the Eskimo pie has taken its rightful place in our industry as a means of taking care of the overhead during the winter months.

I do not know as I can add any information to that which you already possess concerning the making and marketing of the chocolate covered bar. However, as convention is a fitting place to exchange views, and to give the other fellow the benefit of your investigation and experiences, I will give you my observations.

I BELIEVE that in the making of this bar only a plain well flavored cream should be used for a center. The coating should consist of a high grade of milk chocolate with a small amount of bitter chocolate and coco butter. One pound of this mixture should be used to cover 40 ice cream bars. The chocolate covered bar should be cut 20 to a quart and packed in one or two dozen cartons. These bars should retail at 45c a dozen and yield the dealer a profit of 15c a dozen. This is legitimate profit principally on account of the remarkably rapid turnover on the original outlay. A machine, neither too large or expensive but suited to your general needs, should be purchased. Your ice cream business should be so arranged that you can use your surplus help for a whole day at a time and not for a part of a day. It is, of course, important that the bars should be fresh, so do not keep too large a stock on hand. Use your regular transportation equipment for delivery. The publicity given to the product is of the utmost importance. You should make sure that the men have a sufficient supply of window and inside store advertisements, and that they distribute judiciously and replace them when they become dirty or discolored. You should not conduct this department in a lukewarm or half-hearted manner. If it is to be a success, you must devote to it time and effort. The results that you achieve will be in proportion to the care and attention you bestow upon it.

A dealer should make his own chocolate bars as the accepted custom is for the Eskimo pie department to purchase its cream from its own company, thus making this department your largest customer. You charge them the regular wholesale price of quart bricks. In addition to this customer, you will retain the good will and confidence of your dealers. You will also impress them with the idea that you are wide-awake, up-to-date, and always among the first in the field with anything worth while. You will also make from a minimum of several cents to a maximum of eight cents profit a dozen on your bars. This will give you extra money to do business with during the lean months of the winter of your discontent.

In conclusion, the Eskimo pie offers to you a solution of your winter overhead problem. If you will put into the making and marketing of them the same thought and the same energy that you put into your summer ice cream business, you will find that you have discovered the weapon to slay the robber who has for too long time fed fat on your hard earned summer profits.

ESKIMO PIES

If you are making 5 cent Pies you need a Thin Flowing Chocolate Coating. —USE

Fortune's "Thinflo"

"THINFLO" produces a thin shell-like covering, has a delicious flavor, comes all ready for use (no additional butter required) and is most economical because of the great number of pies covered.

"THINFLO" was used on the Anderson Eskimo Pie machine at the Cleveland Convention.

Kratzer Heads Alabama Association

State Pasteurization Law Discussed at Second Annual Meeting at Montgomery,
February 1.—Eleven Cities Represented.

A W. KRATZER, head of the Kratzer Ice Cream Co., Montgomery, was elected president of the Alabama Ice Cream Manufacturers' Association, at the annual meeting on February 1. The meeting was held at the Gay Teague Hotel, Montgomery.

J. P. Betha, Mobile, was elected vice-president and J. W. Clopton of Decatur, Ala., secretary of the South-

turers of ice cream in the state, and assured the Alabama association that this law would be enforced for the best interests of the ice cream industry.

The following cities in Alabama were represented: Selma, Dothan, Mobile, Birmingham, Decatur, Huntsville and Montgomery. Visiting manufacturers represented Columbus, Ga.; Meridian, Miss.; West Point,

A. W. KRATZER,
President.

J. W. CLOPTON,
Secretary-Treasurer.

D. W. C. YARBOROUGH,
Director.

ern Association of Ice Cream Manufacturers, was elected secretary-treasurer.

Mr. Kratzer was promoted from secretary-treasurer when he was elected president. The directors are D. W. C. Yarborough, Birmingham, retiring president; T. R. Horsley, Selma, and J. W. Parkman, Dothan.

J. N. Moore, Alabama commissioner of agriculture, explained the Alabama law as it affects the manufac-

Miss.; and Columbus, Miss. Officials say the meeting was very profitable in every way.

The Alabama association was organized at Birmingham, January 31, 1923, and is one of the infant state organizations. Since its organization some very effective work has been done for the spirit of the industry in Alabama, and officials are very optimistic over the outlook for further success in this work.

North Dakota Ready for Annual Convention

Grand Forks to be Scene of Gathering March 4 and 5. North Dakota
Dairymen Meet at the Same Time

OFFICIALS of the North Dakota Ice Cream Manufacturers' Association have reported everything in readiness for the annual convention of that body at Grand Forks, March 4 and 5. The Frederick Hotel will be convention headquarters. H. K. Geist, secretary of the North Dakota association writes from Grand Forks that a program of much merit is being worked out.

The ice cream manufacturers will join in with the dairymen of the state in a meeting on the afternoon of March 4. There will be a joint banquet at the Frederick

Hotel in the evening. Delegates will take up their time with business only the following day. There will be educational and practical talks by North Dakota members and manufacturers from nearby states. There will be another banquet in the evening.

Officers of the association are looking forward to the convention with great interest. They believe that matters of great importance to the future of dairy manufacturing in North Dakota will be worked out at this convention. They invite every member and non-member to be present.

What Taper-Insulated Cabinets Mean to Your Business

WHEN you purchase a cabinet, you naturally want the best and most efficient money can buy—

A cabinet that stands up; that consumes *little ice*, and at the same time *keeps the cream hard* until served.

The famous Grand Rapids Cabinets meet these requirements because they are *taper-insulated*.

A glance at the sectional view below will show that the cork insulated walls of this dependable cabinet are 5 inches at the bottom, and only 3½ inches at the top.

As cold has a tendency to settle, this extra insulation at the bottom is just where it is

needed. It helps to keep the cream hard and saves ice.

On the other hand, less ice is needed and used at the bottom than at the top. Consequently, it requires less to ice a Grand Rapids Cabinet, at a *further saving in ice*.

Showing No. 535, three-can size.

All Grand Rapids Cabinets are handsomely finished on all four sides. Any side may face out with the faucet in any desired direction. Solidly built of cypress and red wood with heavy hardwood corner posts

forming the legs and running full height of cabinet.

You must see these handsome cabinets to appreciate them fully—better order your sample *now*.

This is the single-can size, (No. 513).

Selling Ice Cream Through Windows

Eastern Manufacturer
Maintains
Window Trimming
Department

Ice Cream Window Prepared by Colonial Ice Cream Co., Philadelphia.

A RECENT psychological test made by the manager of a chain of stores brought forth the surprising fact that 87 per cent of the people bought goods through seeing them on display in the windows and on the counters. When one considers the drawing power of a good window display, such as we all have noticed during the recent vacation, it makes one reflect on the possibilities of window-trimming in setting forth the desirability of ice cream.

An eastern ice cream manufacturing firm was so impressed by this large percentage of people buying on the strength of ocular demonstration alone that it is inaugurating a window-trimming department, with a professional window trimmer in charge who will give his services in advice and in actually trimming the windows of the firm's customers.

Could not some of our ice cream manufacturers in other parts of the state profit by this example to the extent of providing similar departments? What an impetus it would give the trade for all the drug stores, ice cream parlors, etc., buying from the manufacturers to feel they could add to their sales all round by calling

upon a capable window-trimmer to attract the attention of the public to the good ice cream sold within.

Up-to-date, modern plants for ice cream manufacture might also be made to furnish this visual proof of their goods. Every day the writer passes by the blank windows of a large plant in a big city. It is located on a popular street car line at the intersection of two busy thoroughfares but so unattractive is the block compared to the interesting window-trimmed buildings surrounding it that it is always with a sigh of satisfaction that the dismal place is passed. Wouldn't an interesting window display be a veritable oasis here? Ice cream of excellent quality is made within, but how is the public to know? And there are always competitors.

Marie: "At the place where I stayed this summer a green young hired hand tried to kiss me. He told me he'd never kissed a girl in his life, and —."

Gwendy: "And what did you tell him?"

Marie: "I told him that I was no agricultural experiment station."—Laughing Gas.

Selling More Ice Cream

Consumption at Present is Less Than Half What Could Be Developed By Proper Initiative.
No Saturation Point. Subject is Covered in Digest of Three Conventions.
Advertising Stressed

How Ice Cream Consumption Can be Developed

By PROF. J. M. FULLER*

ICE cream can be sold on its merits as a delicious product that has high food value. Will a knowledge as to the value of ice cream be of help to the ice cream manufacturer in increasing the use of his product? I believe it will.

We know that the demand for ice cream has grown to such an extent that the 110,000,000 people of this country consume approximately 250,000,000 gallons. This does not represent the saturation point, not by a considerable margin. Expressed in terms of portions such as are ordinarily served at a meal, the 250,000,000 gallons are sufficient to provide each one of our 110,000,000 people with a serving once each week. The usual serving twice a week would mean a national production of 500,000,000 gallons instead of 250,000,000. In New England it would mean 30,000,000 instead of 15,000,000.

How can the use of ice cream be increased? In the first place, the merits of ice cream as a delicious food product should be explained to the public. In doing this, ice cream men may find it to their advantage to study the advertising of firms distributing nationally advertised food products. In general, these advertisements by words and pictures attempt to impress the reader with the desirability and the palatability of the products advertised. More than this, in many cases the food value of the products is emphasized. For example, the advertisements of cereals, such as cream of wheat, wheatena, puffed wheat and grape nuts, direct the reader's attention to food value. Prunes are advertised as rich in fruit sugar, minerals and vitamins. Beech-nut peanut butter is compared in food value with

round steak. The use of raisins is urged because of their goodness and because they are rich in the elements the body needs. The manufacturer of a well-known gelatine for household use quotes Dr. Sherman to the effect that gelatine is rich in lyeine, a growth promoting element, and emphasizes colloidal action and value in infant feeding. If I remember correctly, this manufacturer had as early as October taken advantage of the work of Dr. Downey in advertising his product.

It is not enough, however, to make a product and to advertise it, even though the product has the intrinsic merit that ice cream has. Quality is a word that should never be forgotten by the manufacturers of ice cream. The public may in time come to know the facts regarding the food value of ice cream, but this will be of small benefit to the ice cream men unless they make a product that is above reasonable criticism as to quality.

Advertising Ice Cream

By JOHN W. MERRIGAN*

OUR advertisement must make an individual appeal and must be in harmony with our plant and its product. It must make its sales talk so that it will bring "sales by suggestion." It must be easily understood and not like a certain bank's advertising appearing in gold letters on their front window reading "4%—on saving accounts." A near sighted man stepped into the bank, pulled out a roll of bills and said to the cashier, "I want to pay for two cases of that 4 per cent and have you send it to my house tomorrow when my wife will be away." He had only read the large letters "4%" and had not read on to the "on saving accounts." So if you would sell more you must tell more and tell it in the right way.

I will not attempt to tell you what the best medium of advertising is, as you have a large variety to select from and your choice should be made according to what you think is best fitted for your particular locality. You have the daily newspaper, the bill board, the sales letter and the illustrated booklets that go into the homes. Then you have your outside signs, electric and metal, and your inside signs that you place inside the store in competition with all the other signs, mostly of nationally advertised articles. Your sign is mostly for local appeal.

When your choice of methods or mediums of advertising has been made you should make your appropriation, the amount of money you are going to spend for

An Outsider's View on "Colonial" Progress and Ideals

by A. C. Gruenewald, *Vice-President and General Manager*

RECENTLY I spent the best part of a morning in my office with a well known and successful doctor of pharmacy in this city. Despite the pressure of other business and office routine, we discussed the history of the Colonial organization, its accomplishments and its future possibilities, from A to Izzard. It proved to be a most interesting session. I feel certain that the doctor enjoyed the little conference, too.

"It is the phenomenal growth of your institution that impresses me most," was part of the doctor's opening remarks. "Prior to your entry into the ice cream field your class of business was the most neglected in the point of merchandising effort—not alone locally, but even nationally. Your coming has been nationally felt; it has awakened your industry to bigger things. You have blazed a trail and have brought honor upon Philadelphia for its good ice cream," continued the doctor.

I listened to the doctor as he pictured in retrospect the events of the past pertaining to our growth, for I was really anxious to obtain an outsider's views on the subject—a report that would be unprejudiced and unsolicited.

The doctor went on to say:

"You have earned your success by new methods, new ideas, and above all by hard work. Your sanitary methods are reflected in this model plant; your pledge to make Philadelphia's best ice cream, and to keep making it better and better, and at the same time using every scientific means to make it pure

and deliver it pure, are the outstanding features of your success.

"Your pride in your product and Company is even evident in your service department; your sparkling truck bodies speak a pride that goes with painstaking success.

"And now on top of all this you promise us a bigger Colonial year for the next twelve months, and I cannot help but wish you lots of good health and good luck."

The doctor's closing remarks referred to Heathization. "You are to be congratulated upon your faith in science, for after all science has done much to perpetuate human life and to alleviate suffering. Heathization from a practical point of view is fast taking its place along side of Pasteurization, and both will some day be universally recognized as twins for health in the manufacture of food products."

Experience is no doubt a good teacher; but experience alone often leaves the most intelligent mind uninstructed in necessary fundamentals, and for this reason I was eager to assume my friend's point of view of our business.

We like to know that we are being watched, and we want to be on the right track all the time. We want to continue to make friends and we want our patrons to know that we appreciate their friendly co-operation and solicit their suggestions.

During the coming year we want to become better acquainted with our trade, and will at all times entertain suggestions for the betterment of our product and our service.

Advertisement

the entire year, say about two cents per gallon, and spend it by a monthly budget and stick closely to your budget. I know that you will thus get better results than if you advertise in a haphazard manner, directed largely by the advertising salesmen you chance to meet.

Let some individual at your plant have entire charge of your advertising and let him direct his energy toward making everyone in your territory use more of your ice cream than they have ever used before. Get your name and ice cream so blended together that when ice cream is mentioned in the home they will immediately think of your name as associated with it. If you are able to do this then you may justly feel that you are a successful advertiser.

If you will stop and think, almost every article with which you come in daily contact, in every-day life, is brought to your attention through advertising. You sleep in advertised pajamas, on an advertised mattress,

on an advertised bed. You are awakened by an advertised alarm clock, slip into your advertised clothing, shave with an advertised razor, hurry down to breakfast, and eat an advertised orange, cereal, ham or bacon. You drink your coffee "good to the last drop in the cup."

Then you read your choice of morning papers "James" announces that your advertised car is ready to take you to your office. You will find your mail ready for your attention on an advertised desk.

There is just one thing more that I would like to get across to you and that is this: There is a certain amount of competition in advertising, that is, your advertisement is in competition with all the other advertisements, every place it is seen. And so if it is not worded properly, or the style is not distinctive, it loses just that much and very often may represent wasted effort. So it behooves all of us to make a compelling appeal in our advertisements in order to get results.

Increasing Gallonage Through the Old Friendly Customers

By W. F. JENNINGS*

WHEN I was invited to speak on this subject I tried to recall, if possible, having heard someone speak at a previous convention on increasing gallonage at the old dealers, but if this particular phase of selling was taken up I must have missed it. A great many men have gotten it into their minds that when they have sent a few salesmen out, done a little advertising, and gotten a few new customers they have about covered the subject of selling ice cream.

Photo by Harris & Ewing.
W. F. JENNINGS.

As a good many of us know, this sales promotion work has been a sort of hobby of mine. I like going with my friends into their plants and having a sort of family talk with the salesmen and trying, in a modest sort of way, to bring to their attention the effort that should be put into the selling side of this business; and I will consider I am successful here today if I do not accomplish anything else but to get you to go back home and call your men together and look at them and say "What are these men doing

for me?" I want you, if possible, to try to keep that on your minds.

Now, unfortunately, I will have to treat this subject of reversing the order of things. I mean no offense if I should happen to hit the nail on the head, but I am afraid I have got to say things that will hurt some of you a little. So, we will try to take this along in

logical sequence and start right at the top of the plant and see why it is that you cannot get yourselves enthused over the selling of ice cream, as differentiated from the other departments of the plant.

It is rather strange that an industry such as this should have gone along as far as it has and so much good solid gray matter is still confined—almost to the point, you might say, of 90 per cent—to operation, research, food values, cans, cabinets and routes. But selling and the salesman! What is he doing? I am going to try to get you, if I can possibly do so, to forget right now, if possible, the new customer. Try to forget that your salesman is a collector, for selling is the job of a salesman, not collecting.

Now just why is it that there is a lack of interest in selling? I think it was Mr. Bush of the Bush Terminals, New York, who wrote a fine article in the American Magazine a few years ago in which he said that every man in business, no matter what kind, should study the selling end of his business; because, first of all, before a man can be a lawyer he must sell his personality. Therefore, selling is really a business no matter who you are. Even in your intercourse with your friends you are selling them, not consciously, perhaps, but nevertheless you sell them.

Why is there Lack of Co-operation?

So why is it we do not have this co-operation down through the plant? I gather it is due to the fact that the majority of ice cream plants running today have been founded by men who are now, (as Mr. Hoffman said) more or less ready to give over the reins if they can be placed in good hands. This industry has grown so fast, the demand has been so great, that these older men have not had the time.

Most plants could sell all the cream they could manufacture in the summer months and they did not expect to sell much during the winter. So these men have carried in their mind's eye the sales department as a sort of by-product. They looked upon the ice cream business as a manufacturing business requiring the use of all these different kinds of machines you are getting into it, and that an eager public would buy their product. Therefore, the sales dragged along and nobody

This is Service!

Thousands of Jamison and Noequal Doors in Stock for Immediate Shipment

THIS is the season of the year when cold-storage plant owners take inventory of their plants—check up on the equipment in condition—and plan their replacements.

When you have taken full stock of the necessary repairs that must be made to maintain maximum plant efficiency, you want the work of replacement done without delay. You want action! You want service!

That's what we're long on—SERVICE. The photo above gives you just a slight idea of what we mean. In it, you see a corner of our stockhouse filled with thousands of standard sizes of Jamison and Noequal Types of Doors ready for immediate shipment. Carrying of this large stock saves you ten days to two weeks time, as shipment will be made the same day your order is received.

In ordering, simply give number of the doors wanted as listed in the "Standard Sizes" tables in our catalogue. A Weekly Stock List is issued giving the quantity of each type and number in stock. This will prove invaluable and we suggest that you let us place your name on our mailing list to receive it regularly.

JAMISON COLD STORAGE DOOR CO.
HAGERSTOWN, MD., U. S. A.

Jamison Doors

for better refrigeration

If you haven't received our new Catalogue No. 11, write for it. You will find it the most interesting 74 pages of cold-storage door information you have ever read with reproductions of doors, blueprints of construction details and tables telling door numbers in stock and their dimensions. You will want this as a guide in ordering the necessary doors during your repair season. Address Desk No. 6 please.

took any interest in them. So responsibility for the lack of sales is placed immediately. The disinterested salesman, the uninstructed customer, and all these difficulties are placed upon the men who own the plant and they might as well carry the burden. Of this we could have no better illustration than we have right here today. I am delighted to see all these supply salesmen here—I like them and we are co-workers—but the lack of interest in selling is proved by the fact that we have only a corporal's guard of the manufacturers of this state who have been kind enough to themselves and to their plants and their customers to wait here. They were in such a hurry to get away they could not even wait to listen to Mr. Fernald's address on advertising the food value of ice cream. I do not know that I am going to say anything that they would want to hear, but at the same time it proves my point that there is not the interest at the top of the plant. Lacking the interest at the top of the plant you lack sufficient sales-manager interest to teach salesmen how to go out and sell.

In the organization that I represent we would not think of sending a man out on the road unequipped to to handle his problems. But I know plants that I call on right in this state that when you go to them on the subject of advertising—now remember, I am not complaining about them—but, oh, how discouraging it is to a man whose hobby is ice cream sales promotion to increase gallonage. Look at the discouragement when I go to a plant and ask the girl "who does the buying of advertising?" She says, "well, I don't know; I think Mr. Smith." She was right. She did not know and no one else knows who does look after sales and advertising in this plant. I make three trips a year and I find about three different men in that partic-

ular plant buying the stuff. All right, I go to see Mr. Smith. He is out. Finally, after a time I get Mr. Smith on the phone and he refers me to Mr. Jones and Mr. Jones refers me to someone else. I talk to three different men, only to find that none of them have anything to do with the advertising buying. I will give any man in the audience a ten dollar bill that can tell who the advertising buyer in that organization is. They sell over one-half million gallons of cream in a year; they are big people but have no interest in the selling end of their business. Pretty soft, I say, to sell the goods that way! But are they selling what they should?

I do not want to bore you with comparisons but it may be interesting for you to know that you can get on the train any time you want to and go to Wilmington, to the Dupont Company, and send in your card. All you have to do is to say you are there on a problem of increasing sales—no obligation. Do they want to see you? You bet they do. And there is not a man in this audience today, I do not care who you are or whether you know anything about advertising or not, you can go to the Armour Company in Chicago and find the same interest. They are never too big to listen to a man who might help them sell more goods. But the average ice cream man has little time for such out of the way subject as sales. I am trying to drive home the point that you lack interest in selling. I am sorry you do, because in ice cream you have got a specialty. I hope you will permit me to put ice cream in the line of specialties and that your salesmen should be trained on the lines of specialty salesmen just as much so as the cash register salesman; (he cannot go on the road until he goes to the company's salesmanship school.) You cannot get a position with any auto tire company without going through a course of schooling to thoroughly learn the product and the finesse of selling their line. So you have a specialty! And why a specialty? For the special reason of the nature of the product and the character of services needed in caring for it. Here is merchandise on sale where the manufacturer lends his customer quite an investment in equipment to do business with, plus the service you render.

You speak of sales. I claim you make no sales. You have goods consigned and you assume the responsibility of keeping it salable. You have the advantage of being the only man who is selling your product in that store. (If you have a split customer, that is your problem to get away from.)

You can go right out on the street and find store after store where some salesman has been sent out from a cereal, soap, razor, or other kind of manufacturer; and every store he will enter to sell his product he will find sometimes as many as a dozen competitors there. Still his company will demand that he thoroughly sell his product to that dealer. Take the hair net, for instance: I suppose today there are no less than one hundred different manufacturers of hair nets; but these live wires have flown afield and jumped away from the natural selling place for that article—the department store—and gone into the drug store right where you are, and where they have no more business in that drug store than a man selling horse shoes. A hair net is not a drug article; (but, of course, a lot of our druggists today carry everything but drugs.)

These salesmen have proved beyond a shadow of a doubt the value of hair nets to the druggist and get the most valuable place on the counter in that store to put up a display cabinet—for the profit that there is in hair nets? No, that is not it. The salesmen get it in there because of the hair net. Look how many of

Attractive Cartons *are hard-working salesmen*

YOUR cartons are salesmen who go right into consumers' homes and keep talking, favorably or unfavorably, of your product until thrown out.

Many distributors of ice cream have eliminated the risk of sending a doubtful talker into the homes of buyers by choosing one of the *sales-compelling* stock designs of Character Cartons.

You might profitably follow their example. Whatever stock design you choose is *yours* alone. No competitor can use the same design in or near your territory.

Distinctive and attractive, stock designed Character Cartons are low in price. For convincing evidence of this write for samples and prices in any quantity no matter how small. Sutherland Paper Co., Kalamazoo, Mich.

13

the girls wear them. If the women are brought to understand that they can get a hair net in any drug store on any corner, at any time of the night, day or Sunday, it is a feeder which brings the women into the drug store. And this store also sells ladies' combs, cosmetics and kindred other lines, so when she comes in to buy the hair net she is mighty apt to buy something else. Therefore, it is a feeder.

Ice Cream Salesman Not Trained.

The ice cream salesman is not trained as a specialty salesman. If he were, he would show how big a feeder ice cream is to any store serving it. Oh, yes, they are much interested in this selling business; they fairly jump for an opportunity to get the other fellow's customer. Then they will come in and tell you they have put in a six hole cabinet in a new store. Have they sold any ice cream? No, they haven't sold a nickle's worth. He has your cabinet in; of course, the sales come later on.

Take the cabinet, take the cans, divide by depreciation, add to that weekly cost for service, bring that down to a monthly basis, pro rate through the year on the same basis that you do the other customer, how much percentage for the year, how much will he sell during January, February and March? Figure it all out and you will see that the salesman has not sold any ice cream. All he has done is to pile up a liability, because he must sell enough cream at that individual place to pay depreciation, cost of the cream and all of the incidental expenses connected with it before he begins to make a profit. Therefore, I say that the salesman's selling starts after he gets the cabinet in.

What About Records?

Take a little suggestion in experimental selling: How many of you have furnished your salesmen with a record of how much cream (not in gallons but in dollars and cents) each one got last December from each individual stop and asked what goal they have set in each instance for this December? Or are you just going to let December come along with the old idea that "when the weather gets good the sales will be all right? I think you can do something. I do not know whether you like to try experiments or not but this would be a good one to try. Instead of trying out the whole selling force, do it this way: Go home and talk to your sales manager. Say, "here Joe, we will spin the wheel, as it were, and pick out a customer, no difference where he is, and you must get me an increase in sales from him in December and an increase in January and February or I am going to have a new salesmanager the first day of March." I bet you he will get down and dig. He will find some way to sell ice cream even if he must take off his coat and do it himself.

But how can he sell it? In the first place, sales can actually be increased by making a dealer understand exactly what his profit on ice cream is. When a man is making money on an article and turning his capital every day he will try to sell that article. If he is not making a sufficient profit there are only two causes. One is that he is not getting enough out of the can or that he is giving too much to the customer.

Regardless of competition between dealers and competition between manufacturers some standardization from the sales point of view must be brought about so that the dealer can make a profit. He has got to make it. Is he going down in the can with the little old round scoop and pushing the swell down? If so, he is pushing nickels down to the bottom of the can. He buys air. Let him sell air. That is the idea. He is not paying you for solid cream and should be taught to sell what he buys.

Ice cream with the swell taken out is not good. The light, fluffy bubble in ice cream is as necessary to quality as any other ingredient. I believe that you would be better off if you would insist that the dealer dip and care for cream so as to make his profit. Go to him and say: "You are honest but you are losing money, and you must make money to stay in business. Let us show you how to do it." Your salesman cannot do anything permanent in promotion work until he first proves that his line is a profitable one. Once you have got that thought into your salesman's mind and he has accomplished the same result with the dealer some co-operation may be expected.

Suppose Mr. Smith is selling my ice cream; I happen to know that he is making a profit of 45 or 50 per cent net, or whatever it is. That is a larger profit than he makes as a rule on anything else he has in the store and he should know it. You are doing all the work. His turn-over is from day to day. How about other things he has in stock?

Take the syrups and fruits he puts on sundaes: He must load up on these for 30, 60 or 90 days ahead; therefore he has a lot of money invested in things to go on ice cream. It should be eaten straight. It is decidedly the way to eat ice cream. I do not think you improve ice cream by putting anything on it. I eat mine straight some other things I don't. (Laughter)

I am rambling around a little. I started with written paper but have thrown it away; and sometime I get too enthusiastic, but I am not going to stop until I get through. (Applause)

DISTRIBUTORS IN ALL PRINCIPAL CITIES

In order to get sales promotion work really down to any kind of working basis it is necessary for your salesmen to get on friendly terms with your customers. Once the salesman has established friendly relations he is close enough to show interest in the dealers welfare; he can, in a nice sort of a way, be able to say: "Joe, you will never sell these lemons; they are pretty poor merchandise; get some new ones." That seems out of place and foreign in your business; but when your salesman is useful and can help the dealer it proves he is appreciative and the dealer will be receptive to any practical suggestion to sell more goods. Your salesman can then proceed to show how ice cream sales can be increased instead of pushing low profit five cent "knickknacks."

You all have nice big stores you sell which remind one of five and ten cent stores, only they seem to push only the five cent articles; and it takes 20 rings of the cash register to total a dollar. They do not push ice cream. Many of them are large drug and candy stores, still they appear to advertise and push only one fountain article. Why is it your salesmen cannot get down nickle drink signs and put up ice cream signs? Simply because the dealer has not been sold ice cream and what it means to him in profit or as a feeder to other lines. Men who smoke a certain kind of cigar or drink some very popular drink step right up and ask at once for those particular things; but this is not true of ice cream and most soft drinks in a general way.

Customers are apt to take the verbal or advertising suggestion, particularly if it is an appetite appeal. Those who do not form a very strong habit for some particular thing always hesitate and at that particular moment they are exactly in the same position as the customer who goes into a cafeteria. Just think of the quantity of old fashioned jelly that is being sold at the cafeterias. I bet there is more jelly being sold in the William Penn Cafeteria today than in all the hotels and restaurants in Pittsburg for the reason that there is the appetite appeal.

Selling Takes A Back Seat.

So there you are: using up an awful lot of time on everything connected with the ice cream plant, but your selling must always take a back seat. And still your product is stuck away in an ice box waiting for volunteer customers. They are volunteer customers because there is seldom an ice cream appetite appeal displayed at these soft drink counters. Try another experiment with a thirty day campaign in your town by seeing if you cannot get up all the appetite appeal possible. Get the dealers to give ice cream the exclusive selling for one month, and agree with your competitors that during the campaign you will not put your name on a sign. Get them in on it.

Some manufacturers try to get returns from advertising the brand name only and never appealing to the eye with luscious pictures of the ice cream. A year ago I had the pleasure of reading a survey that was made by one of the biggest advertising concerns in the country in which the writer told this particular ice cream manufacturer that he was very deficient in the advertising of ice cream; but he spent a lot of money advertising himself. You could see him on every bill board and every side wall and door. His name was and is all over the country for miles and miles. You would have thought he was running for governor or something. Was there anything about ice cream? No; only his name and that he made ice cream. To show how he appreciated the advice he paid a high price for you will find he is today

(Continued on page 61)

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

ing along merily as of old. He still has the survey
at to all appearances does not believe in expert opinion.

Coming back to the selling end again: If you cannot
ing your dealer in the first place to realize that there
profit in ice cream it is your salesman's fault, pro-
vided you have trained him. Get another one. If you
ve four salesmen who are not bringing results, each of
hom you are paying thirty-five dollars a week, get rid
them all. Hire some collectors to take their places
smaller wages.

Get one good man, even if you have to pay him two
hundred dollars a week, and say to him: "I have five
hundred customers but I do not expect you to call on
te five hundred. I am going to give you just twenty-
five customers to start with. Here is the biggest chain of
ug stores that we have. They are selling a very large
llonage of cream now but I am hiring you for two
hundred dollars a week and you have no other business
e present except to go to that particular chain of drug
sres and build a business twenty-five per cent bigger
an it is today."

See if he will do it. He will do it if he is a two
hundred dollar a week ice cream salesman.

No matter how much effort you put forth at the
ant and how well your salesman is trained, you are
nt going to accomplish a lot if you do not make the
daler appreciate that people do not want to eat ice
eam unless the surroundings are right. The environ-
nt for the sale of ice cream is really an important
estion and you cannot expect much under improper
editions. Go down town and eat well made ice cream
der favorable smelling, seeing, feeling, hearing condi-
ins and note the satisfaction. But suppose the dealer's
ee should happen to be unclean, unsanitary, then the
ality is missed amid such conditions. I leave it to
a to select your trade. If the majority of your stops
e unclean you will get a reputation of catering to
t kind and your quality will be thought to be about
e your stops. The places do not have to be an awful
e cleaner than the people living in that neighbor-
od. At the same time the cleaner and more courtesy
nd, usually the better the business. I made a trip
h George Gilpin to the south side of Pittsburg last
ek and I think we counted some thirty Rieck dealers
one street in rather a short ride, each store showing
eplete window displays; but the thing that struck
e was the appearance of those stores. Somebody had
en doing good work there. That was selling dealer
operation wholesale.

I am glad a certain man is not here because I want to
e a story on him. He lives in Ohio and is a very
eous sort of fellow—don't talk near as much as I do.
I seldom talks about his plant or problems; but for
e in his life he happened to get started on the quality
f his ice cream. He said: "I know a lot of people in
h town that go six or eight blocks to buy my ice
eam."

He was having a good bit of pleasure out of it and
lly he stopped and I said: "Do you mean to tell me
r; you know of a particular man who will go eight
ks to get your particular cream?" He said "Yes."
id: "Now listen! Go back right now as if you were
tiding on that man's front porch and tell me how
y stops you have between his home and the dealer
e patronizes." "Well," he says, "I have three." I
; "Where is pour argument? That man went eight
ks to find some place clean enough to eat ice cream
not particularly for your ice cream. If that same deal-
ould put your ice cream out and put in your compet-

OUR ADVERTISERS ARE YOUR FRIENDS—BUY FROM THEM.

itor's cream his sales would keep up just as now; because a man running a business as good as that will not buy a cream unless it is good, and when he puts you out his gallonage will not fall off. This man is selling ice cream under proper conditions and he is going to sell just the same amount of gallons of cream no matter what good cream he sells."

In closing I want to make this observation: Altoona

is the only town I have known that appears to have a "Ice Cream Week." We have "Candy Day" for the candy man and we have "Mother's Day" for flowers; we have "Raisin Day," "Apple Day," and a lot of other "days;" but how about all of us going back home and making every day a working day for the salesman a day to increase the consumption of ice cream at and friendly stops.

How Can Retailers Be Induced to Sell Carry-Out Bulk Ice Cream at a Price Which Will Give a Profit and Therefore Lead Them to Push This Sort of Sale?

By P. S. HARMON*

THE meat of the question is how can we help dealers to make a profit on the quarts and pints which they dish up to send out? It seems to me that our job in answering this splits into two channels:

First: We can do our best to teach them how to dish cream more economically and there is a lot to be said about this.

Second: We can try to get the dealers to charge more for the goods and this is the part that I especially hope will be discussed.

Let's take angle No. 1:—"Teaching them how to dish cream." I realize that the quality of the product has got a lot to do right here, but I am assuming, and I think rightfully so, that the ice cream manufacturer today is guarding his quality more carefully than ever before. It is a fact, however, that the average dealer's education along these lines is far behind the manufacturer's and they still look on us with suspicion, knowing only the chances for variation in the overrun factor. Much can be done to remedy this by passing along to them information that we get from these conventions, research bureaus, etc. Suspicion is always caused through ignorance, and the quicker we can get our dealers to understand some of the things we know about solid and fat content, overrun, gelatine content, etc., the quicker we are going to get their confidence and whole-hearted co-operation. I'll say right now that every one of our dealers is going to get a copy of Dr. Downey's illuminating paper on gelatine.

YOUR DEALER CAN SUPPLY YOU

Beehler Steel Products Co., 1437 No. 13th Street
ST. LOUIS, MO.

Having made sure that our product is right and having convinced the dealer that it is honest, the next thing to do is to try to show the dealer and his clerks the proper way to handle his disher to preserve the quality and not get a quart and a half or more of cream into a quart container. This I know is a hard and endless job for clerks keep changing and new customers are continually coming into the field, but it is work which pays big returns. For our own part we are continually driving it into our salesmen and help them by sending out each customer this card which is hung up behind the cabinet and contains suggestions for the proper care of the cabinet and dishing of the cream. We believe this has done a lot of good, especially with new customers. So much for Angle No. 1. I expect to get more suggestions along this line from the other members as soon as I sit down.

Angle No. 2: How to get the dealers to charge more for bulk is the thing that stumps me and really causes me to start the question in the first place. I admit trying among the dealers of certain towns, both with our own customers and with competitors' customers, working with competitors, but must also admit failure. They still charge sixty cents a quart and thirty cents a pint and in some cases fifty and twenty-five cents. And gentlemen, it can't be done at those prices. No matter how much improvement we can obtain through Angle No. 1, as above suggested, sixty cents per quart doesn't give margin enough to get the dealer out whole and therefore encourage him to push this business which is our business.

Helping Dealer Push Sales

By A. A. Mc LERAN*

WHAT do we do as a whole to show the dealer that we are willing to co-operate with them? Most of us—nothing. Don't the supply people that buy from show to us through their salesmen that they are anxious to co-operate with us in any way to help our business? I will say that I think they have done more than we have ourselves by giving us new ideas that they pick up on the road from place to place.

I think it is time the Mississippi Ice Cream Association was doing something to show the dealer that

Ever More and Larger

U. S. Heavy Duty Freezers

*Mark the Growth of
This Successful Manufacturer*

The Superior Ice Cream Co., though in operation only a few years, is rapidly coming to the front.

Their first installation back in 1920 consisted of three Commercial 40 Qt. Cap. U. S. Heavy Duty Freezers. These having given the most satisfactory service, they added a Hercules 120 Qt. Cap. U. S. Heavy Duty Freezer in 1921.

In the spring of 1922 they added another Hercules 120 Qt. Cap. U. S. Heavy Duty Freezer, and in 1923 still another, making three altogether. The larger picture shows their plant as it is today, with only one of the original three 40 Qt. Cap. Commercial U. S. Heavy Duty Freezers still in place.

Superior Ice Cream Co.'s plant in 1923

A comparison of this picture with the one below shows how the nearest two 120 Qt. U. S. Heavy Duty Freezers replaced two of 40 Qt. Capacity. Should they replace the remaining 40 Qt. Freezer with another 120 Qt. U. S. Heavy Duty, they will have just doubled their plant capacity (from 240 to 480 Qts.) without appreciably increasing their manufacturing floor space.

Note latest construction, including U. S. Automatic Batch Weigher, in their present plant.

We consider such recurring repeat orders the best recommendation we could possibly show for U. S. Heavy Duty Freezers.

Satisfied Successful Users Everywhere

We will gladly give you the names of those near you, so you can ask them what they think about U. S. Heavy Duty Freezers.

Superior Ice Cream Co.'s plant in 1922

Showing one 120 and three 40 Qt. U. S. Heavy Duty Freezers, the combined capacity being 240 Qts. Note how three 40 Qt. Freezers with a combined capacity of 120 Qts. take nearly three times the floor space required by the one 120 Qt. U. S. Heavy Duty Freezer at the farther end of the row.

are anxious to co-operate with them in any way to help the industry.

Do we ever send a delegate to the druggist's convention, to mingle with them and give them our views of the ice cream business? No. But, you can bet every manufacturer of drugs or drug sundries have their men "on the job," get all the information they can, and show that they are willing to co-operate.

There is nothing that the druggist can make more money on, with a quick turnover, than ice cream. I see no reason why every druggist or anyone that handles ice cream should not get behind it and push their sales.

Everybody is for ice cream, and if we will show our dealers that we will co-operate with them and help them

in every way possible, we can materially increase our sales during the coming "season."

We all know it is a health food. The public knows it. They want ice cream, and, we want them to have it. Let's go together, co-operate with our dealers and see that they get what they want.

We know from experience we cannot sell cream for less than we are now receiving at present prices of raw material.

The solution, in my estimation, is to manufacture a better article, deliver it to our dealers in better shape and see that it is delivered to the consumer in better shape.

I suggest that we spend our efforts, this season, in teaching our dealers how to keep ice cream.

The Outlook in Mississippi

Excerpts from Speeches Before Mississippi Convention
Co-operation Stressed

PRESIDENT'S ADDRESS.

S. N. Sutton.

IF I were to stand here and show you a way that you could make five thousand dollars without any financial investment, without any labor and without any cost whatever, you would be interested, would you not? Yet if you do not believe that a spirit of co-operation with your competitors will do as much for you, all you have to do is to open your eyes and look around.

Get in touch with the boys in New Orleans, or in Louisville, or the secretary of our Southern association. That is all you have to do to see how a little co-operation, a little consideration for the other fellow, a little less of that "I want all the business" spirit has made those boys thousands of dollars.

And, boys, it will do the same thing for us, if we will just all resolve to let the other fellow have a little of the business and try to remember some of the teachings of Him, who said: "All things whatsoever ye would that men do unto you, do ye even so unto them."

* * *

THE OUTLOOK FOR RAW MATERIAL.

By Will H. Becker.

The figures I am giving are taken from thirty-one factories that are members of this association. I did not include the drug stores and some small plants that are only doing local business and are not members of this association.

These thirty-one plants made 1,300,000 gallons of ice cream and there was shipped into the state by factories at Memphis, New Orleans, and Baton Rouge 200,000 gallons making a total of 1,500,000 gallons of commercial ice cream sold in Mississippi last year.

Nineteen of the plants in the state made their own mix, eleven buy their mix from Kentwood and one plant gets mix from New Orleans. Of the nineteen plants that make their own mix, eighteen have a local milk supply and one buys from outside sources. Eight factories use butter which is bought from Mississippi creameries. Seven use skimmed milk powder to bring up their solids. Sixteen skimmed condensed. Five use skimmed condensed manufactured in Mississippi. Eleven buy outside the state. Three use sweetened condensed.

The factories that buy their mix would be termed as getting their raw material from outside the state, although a goodly portion of the raw material used at

Kentwood is produced in Mississippi as Kentwood is just outside the state in Louisiana.

Twenty-two of the plants use mechanical refrigeration for freezing and hardening and nine use ice. Counting the plants that buy their mix twenty-one sell a machined product and ten use no machines. Of these twenty-one, two use emulsers, fourteen viscolizers and five homogenizers.

The average butterfat content of the cream sold is 9.5 per cent and the average total solids 33.9. This makes an average of 1.5 per cent more butterfat than is required by law. Some of the plants run as high as 12½ per cent butterfat.

The prospects for milk products for this year are very encouraging as dairying in Mississippi has shown a marked increase in 1923 over 1922 and it is the opinion of the creamery operators that the increase this year over last will be even greater. At present it is hard to forecast the price of milk products but I cannot see why they should not be about the same price as last year. With the exception of skim milk powder you should be able to get all your milk products in Mississippi this year. The leading dealers in cream, condensed and skim milk powder advise me that they think that the prices that prevailed last year will be about in line for this year.

FUEL VALUE OF SOME COMMON FOODS.

By B. J. Anderson.

What is one man's meat may be another man's poison, but experience has shown that milk products are easily digested by more people than any other class of food.

In a table shown in Vol. 8, page 775, of the New International Encyclopedia, of the different kinds of food listed, sugars and starches lead in available energy with 98 per cent, and dairy products are second with 93 per cent. Both are important ingredients of ice cream.

Food which is attractive to the taste quickens the flow of saliva and other digestive juices, and this digestion is aided.

The ideal diet is that "combination of foods which while imposing the least burden on the body, supplies it with exactly sufficient materials to meet its wants."

The manufacturer of commercial ice cream has done

Meeting—Not Dodging— Pure Food Laws

All concern about your gelatine meeting the pure food requirements can be abandoned if you use Atlantic super-clarified Gelatine. It easily passes pure food requirements in every state in the Union. It's safe. Its uniformly high quality—its purity, clarity—and high viscosity give fine body and texture to your product.

The cost is less, too.

In spite of higher manufacturing cost in making "Atlantic"—from the finest raw materials obtainable and through careful processing and testing—it sells for less than other gelatines of corresponding grades. Take advantage of moderate price and uniformly high quality by standardizing on Atlantic super-clarified Gelatines.

*"Purest and Best—
It Stands the Test"*

Just to Make Sure

Make the test of trying out our gelatine by ordering a barrel from the nearest office. Use five or fifteen pounds and if it doesn't match up with our claim for it, send the unused portion back. We will pay the freight both ways.
